REVIEW OF 1966

The Canadian economy in 1966 experienced still another strong advance as continued high levels of demand in the domestic sector, coupled with buoyant conditions abroad, pushed Gross National Product¹ to a level of 57.8 billion dollars, 10.9 per cent above that for 1965. With the economy continuing to operate at high levels of employment, the resulting pressures on prices and costs were evident in a 4.6 per cent advance in prices, an advance which reduced the 10.9 per cent gain to one of 5.9 per cent in real terms. This compares with an increase of 9.9 per cent in GNP in 1965 which was reduced to a volume gain of 6.9 per cent, after accounting for price advances of 2.8 per cent.

In May 1966 the Labour Force² totalled 7.4 million, an increase of 260,000 from the year before. During this period employment rose by 278,000 or 4 per cent. An increase of 342,000 (5.5 per cent) in non-agriculture employment was offset by a decrease of 64,000 (9.8 per cent) in employment in agriculture. At the same time the number of unemployed decreased from 265,000 to 247,000, i.e. by 6.8 per cent. Ninety-five per cent of this decrease occurred in the non-agriculture segment of the labour force. Unemployment fell from a rate of 3.7 per cent in May 1965 to 3.3 per cent in May 1966.

Persons Covered by Unemployment Insurance

On June 1, 1966 the number of persons covered by the Unemployment Insurance Act was estimated at four and one-half million. This represents 73 per cent of the non-farm paid worker labour force in Canada. The increase of 5 per cent in the insured population from the year before is approximately the same as the increase in the non-agriculture paid worker segment of the Labour Force.

Although only 30 per cent of the insured population are females, they accounted for more than one half of the increase over last year. While the number of females increased by 10 per cent, the increase was less than 4 per cent among men.

Just over two thirds of the insured population are concentrated in the Provinces of Quebec and Ontario, with 13 per cent in the Prairies, 10 per cent in British Columbia and 8 per cent in the Atlantic Provinces. This regional distribution was reflected in the allocation of the 230,000 increase in the insured population since 1965. Five major industries—manufacturing, trade, transportation, construction and services—accounted for nearly 90 per cent of the insured population. Representation in other industries was small.

Nearly one half of the insured population are classified as either craftsmen or labourers. Increases in these 2 occupations accounted for over

¹ "National Accounts, Income and Expenditure", D.B.S. Catalogue No. 13-001.

² "The Labour Force", DBS Catalogue No. 71-001.

50 per cent of the growth in the insured population. Clerical occupations represent 20 per cent and accounted for 30 per cent of the total increase in the insured.

One quarter of the insured population were less than 25 years of age. Twenty per cent of the males and 30 per cent of the females were in this age group. Fifty per cent of the males and 40 per cent of the females were in the 25-44 age group which comprised 45 per cent of the total.

Approximately 50 per cent of the females were in the clerical and sales occupations which accounted for 60 per cent of the females under the age of 25. Production³ workers and labourers accounted for 60 per cent of all males.

Benefit Periods Established

There are two types of benefit periods which can be established—regular and seasonal. The total number of benefit periods established dropped from 1.3 million in 1962 to 1.1 million in 1966, a decrease of 17 per cent. Regular claimants accounted for less than half (45 per cent) of this decrease. The rate at which seasonal benefit periods decreased (32 per cent) was three times as great as that for regular (11 per cent).

There was virtually no change from 1965 in the number of benefit periods established this year. An increase of 30,000 in the number of regular claimants was offset by a decrease of 34,000 for seasonal claimants.

Chart 1 presents the historical pattern of benefit periods established, beginning in 1942 when such data first became available.

Regular benefit.—A regular benefit period may be established at any time during the year if the qualifying conditions are satisfied. During the interval beginning with the week in which December 1 falls and ending with that in which May 15 occurs, a person failing to fulfill the requirements for regular benefit is considered for seasonal benefit.

The regional distribution of the 822,000 benefit periods established closely follows that of 1965. Ontario accounted for 34.1 per cent of the claims (32.3 per cent in 1965), Quebec for 30.7 per cent (32.3) with the remainder being divided almost equally among the Atlantic, Prairie and Pacific Regions. The increase over 1965 of 30,000 claim-

³ This group "Craftsmen, production and other related workers" includes occupations such as tailors, carpenters, mechanics, longshoremen, jewellers, millers, bakers, etc.

ants was due primarily to increases in Ontario (24,000) and British Columbia (13,000). An offsetting decrease occurred in the Prairie region (6,000) with Quebec and the Atlantic region remaining virtually unchanged.

The relationship between the size of the insured population and the number of regular benefit periods established provides an indication of incidence of claims. From a population of 4.5 million, 822,000 claims were established. In other words, 2 out of every 11 people who were insured (18 per cent) established a claim for regular benefit. In the Atlantic provinces the proportion of claims to insured population is considerably higher than in the rest of the country. Undoubtedly this can be attributed to the greater proportion of claimants in this area who are in the logging and mining industries. The Prairie provinces rank lowest in the scale, with the percentage of claimants in this region being well below the national average.

For persons over the age of 64 the proportion of the insured population claiming benefit was 50 per cent higher than the overall rate. Three out of 11 people in this age group established benefit as compared with the national rate of 2 out of 11. The greater difficulty experienced by older workers in obtaining employment is further indicated by statistics on the duration of benefit drawn to be mentioned later in this report. With the exception of this age group, the proportion of claimants varies inversely with age. This ranges from 16.8 per cent in the 45-64 age group to 21.7 per cent for the under 20 age group.

Fifty-five per cent of the 30,000 increase of claims established occurred in the "under 20" age group. Since last year the number of claimants in this group increased by one-third. In the 25-64 age group approximately 11,000 additional claims were established.

Almost two thirds of the claimants were married, 30 per cent were single and the remainder either divorced, widowed or separated. This pattern has remained unchanged since 1962. During the past 5 years there has been practically no change in the industrial composition of claimants establishing benefit periods. Manufacturing and construction account for one-half the number of claimants. The rise in the number of claimants in 1966 was concentrated in 3 industries - 14,000 in manufacturing (6 per cent increase over 1965), 14,000 in construction (10 per cent increase) and 12,000 in transportation (17 per cent increase). There was a 10 per cent decline in claims from the primary industries.

Production workers who comprise 40 per cent of claimants accounted for 70 per cent of the annual increase in benefit periods established. Small increases were reported for workers in the clerical, transport and communication, and labourer occu-

pations. Of those occupations recording a decrease in the number of claims in 1966, the largest reductions occurred among loggers and miners.

Approximately 45 per cent of claimants establishing a regular benefit period in 1966 had dependants. Of these, 60 per cent were eligible for benefit at the maximum rate, compared with 27 per cent for those without dependants. The proportion of males claiming at the maximum rate was much higher than for females.

Although the number of benefit periods established has decreased by over 90,000 since 1962, the number of claimants eligible for maximum benefit has increased by nearly 92,000 - from 28 per cent of total claimants in 1962 to 42 per cent in 1966. In 1966 there were 66,000 more claimants in this category than in 1965 when 35 per cent of the claimants were eligible for maximum benefit. The benefit rate is a function of contributions and earnings, with the maximum rate related to earnings of at least \$69 per week. The observed increase in the numbers and proportion of claimants eligible for maximum benefit reflects the continuing increase in average weekly wages and salaries⁴ which have risen from \$80 in 1962 to \$96 in 1966.

Benefit Periods Terminated

Regular benefit. - A benefit period is terminated either by exhaustion or by lapsing. The interval during which benefit may be paid on a regular benefit period may not extend beyond 52 weeks.⁵ If a claimant draws all the benefit to which he is entitled within those 52 weeks, his benefit period terminates by exhaustion. If, at the end of 52 weeks, all the benefit is not drawn, the benefit period terminates by lapsing.

The duration of regular benefit periods terminated averaged 11.3 weeks, \$292 being the average benefit paid. The province of Newfoundland ranks highest in the average number of benefit weeks paid (14.1), with Alberta averaging the shortest duration. A similar pattern emerges for average amount paid.

The largest decrease (from 1965) in weeks of benefit and amount paid occurred in the three Prairie Provinces, reflecting the high level of employment in that region.

It is of interest to note that while the average number of weeks paid declined in 1966, the average number of weeks authorized rose. Benefit was paid for 43 per cent of the average number of weeks authorized in 1965, 37 per cent in 1966.

⁴ "Employment and Average Weekly Wages and Salaries", DBS Catalogue No. 72-002.

⁵ Under the "Training Allowances Act - 1966" the benefit period of an insured person may be extended if he (or she) is in receipt of a training allowance. The benefit period is extended by the amount of time the person is undergoing training, but in no event can the benefit period extend beyond 156 weeks.

As can be expected in a buoyant economy with increased employment opportunities, the average duration on benefit periods terminated by lapsing decreased in 1966. However, there has been a slight increase in the average number of weeks paid on benefit periods terminated by exhausting. This may be attributed to a higher proportion, in 1966, of females for whom the average duration of benefit is greater than that for males.

Approximately 22 per cent of regular benefit terminations were exhaustions in comparison with 26 per cent in 1965. The ratio for the Atlantic region is considerably higher than the national average.

The duration of benefit paid among the 65-and-over age group is significantly longer than in any other group, averaging 25.2 weeks against an overall average of 11.3 weeks. More than 46 per cent of claimants in this age group exhausted their benefit.

Seasonal benefit.—A seasonal benefit period may be established during the interval beginning with the week in which December 1 falls and ending with that in which May 15 occurs. At the end of this period a seasonal benefit period is terminated automatically by lapsing. A seasonal benefit period is terminated by exhaustion in the same way as a regular benefit period.

In 1966, 255,000 seasonal benefit periods were established, the lowest number since 1962. This represents a decrease of 12 per cent from 1965, and 32 per cent from 1962.

The pattern of regional distribution of seasonal claims has not changed to any great extent over the past few years. Quebec has the largest share of claimants at 29 per cent, followed by the Atlantic region with 28 per cent, Ontario with 22 per cent, and the Pacific and Prairie regions with 10 per cent each. However, of all initial claims considered during the seasonal benefit period, the proportion that were seasonal in the Atlantic Region was considerably greater than in the rest of Canada.

Approximately 30 per cent of the decrease in the number of seasonal benefit periods since 1965 occurred in Ontario followed closely by Quebec with 27 per cent, then the Prairie region (19 per cent), Atlantic region (15 per cent) and British Columbia with 9 per cent.

With one exception the reduction in the number of seasonal benefit periods established occurred in all age groups (teenagers increased by 30 per cent over 1965). The ratio between married and single claimants remained fairly constant. For every single claimant there were approximately 1.8 who were married.

A reduction in seasonal benefit periods between 1965 and 1966 was reported in every industry with decreases in forestry and construction ranking highest. The manufacturing and construction industries continued to account for 40 per cent of all claimants.

With one minor exception (i.e. the managerial occupations) the claimant picture was brighter in every occupational division. Over 50 per cent of the reduction in claimants since 1965 was in the production workers and labourer divisions which include more than half of the claimants. The transport, logging and mining occupations each showed a 20 per cent reduction.

The percentage of claimants with dependants remained at 44 per cent. Whereas 33 per cent of claimants with dependants were drawing benefit at the maximum rate, only 15 per cent of those without dependants were drawing the maximum. A total of 23 per cent of claimants were eligible for seasonal benefit at the maximum rate. This compares with a 42 per cent rate for those eligible for regular benefit. Although the number of seasonal benefit periods established declined by 34,000 since 1965 and by 120,000 since 1962, the number of claimants drawing maximum benefit decreased by only 500 since 1962, with an increase of 500 occurring since 1965.

Seasonal benefit paid averaged \$240 for 9.7 weeks, a weekly average of \$24.70. Total seasonal benefit paid amounted to \$61.3 million which compares with \$68.2 million in 1965.

As has been the case during the past several years, average duration and amount of benefit paid in the Atlantic region are both considerably higher than the national average. Patterns established for both of these characteristics remained virtually unchanged in each province.

There are two kinds of seasonal benefit periods, Class A and Class B. In order to qualify for Class A benefit, a claimant must prove at least 15 contribution weeks since the prior March 31. A claimant who does not qualify for Class A benefit can qualify for Class B benefit if his regular benefit period has terminated since the previous mid-May. Not more than one seasonal benefit period may be established during the period December 1 to mid-May, the interval during which the provisions for seasonal benefit are operative.

Changes from 1965 in the average duration and benefit paid were slight for both Class A and Class B claimants. Average weekly payments increased from \$24.12 to \$24.60 for Class A claimants and from \$24.48 to \$24.97 for Class B claimants. Out of the total of \$61.3 million paid for seasonal benefits, \$44.2 million were paid to Class A claimants, \$17.1 million to those in Class B.

Persons eligible for seasonal benefit Class A comprised two thirds of the total but received virtually three quarters of the benefit. One third of Class A claimants were located in the Atlantic region, in contrast with less than one in five of Class B; thus, 80 per cent of the claimants in that area were in the Class A category. This is associated with the concentration in that area of fishing claimants, of whom the great majority are Class A. Seasonal fluctuations in employment are also more severe here than elsewhere in Canada.

Almost two thirds of Class B claimants are in Quebec and Ontario, but only 46 per cent of Class A. The Prairie and Pacific regions each represent 10 per cent of both classes.

It is interesting to note that Class A claimants in the Atlantic region received 40 per cent of the \$44 million paid Class A claimants, the same proportion as was paid to Quebec and Ontario com-

bined, despite the fact that the two central provinces accounted for 46 per cent of the Class A periods, as against 33 per cent in the Atlantic. The main factors contributing to this circumstance were the relatively higher proportion of males and the longer average duration weeks paid, in the Atlantic region. Two thirds of the payments made to Class B claimants went to Quebec and Ontario.

APPENDIX C

Technical Note

The Unemployment Insurance Act is compulsory for workers engaged in employment not specifically denoted as "excepted employment". One of the elements indigenous to the concept of insurable employment under the Act is a contract¹ of service or apprenticeship, either expressed or implied, written or oral. Contributions are required for both employer and employee (in equal amounts), augmented by a 20 per cent grant from the Consolidated Revenue Fund. All administrative costs are paid out of moneys appropriated by Parliament.

Persons² employed in agriculture, hunting, trapping, private domestic service and teaching are excluded, as are employees of a provincial public service³ or municipality³. Members of the Canadian Armed Forces and of police forces³ are also excluded. Medical, nursing, technical and domestic staff in hospitals³ or charitable institutions³ not carried

¹ It follows that the class of worker coming within the purview of the Act is the "paid-worker", the single exception being the extension of coverage to the Fishing industry, April 1957. Because the majority of workers in this industry are self-employed, special regulations were required to adapt the plan to the particular conditions in that industry.

² This list is not intended to be exhaustive; those interested in more exact details should consult the Act and Regulations.

³ Unless insured under special arrangements with the government (or employer) concerned.

on for profit do not contribute, neither do private duty nurses. An earnings ceiling restricts contributions to employees earning \$5,460.00 or less except where the term of employment is hourly, daily, or piece rate in which case contributions are required, regardless of the amount of earnings.

When a person separates from employment, his claim is first examined in the light of the contribution requirements as defined under "Qualifying conditions" for Regular Benefit. Where these are met, the average weekly rate, the weeks of entitlement, together with the total entitlement, in dollars, are calculated. Because the Act allows for compensation of partial weeks of recorded unemployment, the dollar value of total benefit entitlement is essential. Once these values are established, the claim is then adjudicated to ensure that the claimant has fulfilled all the other conditions of qualification for benefit.

During the 5½ months commencing with the first week of December, seasonal benefit is payable to certain classes of claimants unable to prove the regular contribution requirements. Classes of claimants eligible for seasonal benefit are listed under the paragraph "qualifying conditions"—seasonal benefit. Claimants must fulfill the conditions as for regular benefit except those with respect to contributions.

Glossary of Terms

Insured Population.—The number of persons estimated as in contact with the Unemployment Insurance Commission either as contributors or as claimants at approximately June 1. Estimates are based on a 10% sample.

Regular Benefit.—A claim for regular benefit may be filed at any time. To be eligible for this benefit, a claimant is required to prove minimum attachment to insured employment as indicated below under "Qualifying Conditions".

Seasonal Benefit.—Applicable only during the interval commencing with the week in which December 1 falls and terminating on the Saturday of the week in which May 15 occurs. During this period of the year, when insufficient contributions are recorded on a claim for regular benefit, it is automatically considered under the seasonal benefit provisions.

Benefit Period.—This is simply a term used to denote the existence of benefit rights. There are regular benefit periods and seasonal benefit periods.

Establish.—Within the context of this report the term "establish" refers only to persons who have fulfilled the minimum contribution requirements entitling them to either regular or seasonal benefit.

Terminate.—A benefit period terminates when the right to benefit no longer exists. Benefit periods terminate either by lapsing or by exhaustion.

Lapse.—Regular benefit rights lapse one year from the date established, unless exhausted earlier. All rights to seasonal benefit lapse with the closing date of the interval during which these benefits are payable.

Exhaust.—When a claimant receives all the benefits to which he is entitled, the benefit period terminates automatically by exhaustion.

Qualifying Conditions

Regular Benefit

- (1) Where there has been no previous benefit period established within the prior 104 weeks, a claimant is required to prove 30 weeks of insurable employment within that interval and at least 8 of these weeks must fall within the year prior to the current claim.
- (2) Where benefit entitlement has been established within the prior 104 weeks, the 30 week requirement remains, but additional tests are applied as in (a) and (b).
 - (a) The cycle to which the 8 week test applies may be less than one year. If, for example, a **regular** benefit period was established at any date within the year prior, then the 8 weeks must have occurred since that date.
 - (b) Where entitlement to either regular or seasonal benefit has been established within the prior 104 week interval, then 24 of the 30 contribution weeks must have been recorded **either** since the date the previous claim was established **or** within the most recent 52 weeks whichever is the longer interval.

Seasonal Benefit

In order to qualify for Class A, a claimant must prove at least 15 contribution weeks since the prior March 31. It follows, then, that entitlement under Class A can only be set up between the weeks of December 1 and March 31. To be eligible for Class B, a regular benefit period must have terminated since the previous mid-May.

Claimants are tested, first, under Class A, only those failing the 15 week requirement being eligible for Class B. Seasonal benefit periods established subsequent to the end of March are exclusively Class B.

During the 5½ months in which the seasonal benefit provisions are operative, a claimant is eligible only once.

Weekly Rate.—This is an amount computed at the time the benefit period is established. For regular benefit, the rate is based on the average contributions (which in turn are determined by insured earnings) during the most recent thirty contribution weeks referred to under "Qualifying Conditions". As indicated in Appendix A, Columns 3 and 4, the rate will be higher for those with a dependent. The amount paid weekly, to a claimant, however, may be less than the maximum for his average earnings. Partial weeks of benefit may be associated with partial employment or spells of non-availability. Columns 5 and 6 of the Schedule in Appendix A illustrate the operation of the allowable earnings provision for each weekly rate. An example will serve to illustrate this: if a claimant eligible for

\$36.00 a week benefit earns \$18.00 or less in a week there will be no reduction in the benefit on that account. However, should the earnings be \$20.00, only \$34.00 benefit would be paid.

The Act contains a provision which ensures that a rate is not unduly reduced, relative to a prior claim, because of intermittent or partial earnings. For example, when a claim is being computed it may be found that, on the basis of the earnings during the qualifying period, the weekly rate should be \$26.00. If, however, this person had a claim within the previous 104 weeks on which the weekly rate was \$36.00, then by virtue of Sec. 47 (2a) of the Act, the weekly rate on the new claim would become \$33.00.

For seasonal benefit Class A, the benefit rate is based on the average contributions since the preceding March 31.

For seasonal benefit Class B, the benefit rate is that of the regular benefit terminated since the previous mid-May, subject to redetermination on the basis of a change in dependency status.

Dependency Status.—Benefit is payable either at the single or dependency status, where a claimant is either (a) a man whose wife is wholly or mainly maintained by him (b) a married woman who has a husband dependent on her (c) or a person who maintains one or more children under 16 years of age or who supports a person related by blood, marriage or adoption, in a self-contained domestic establishment.

For purposes of classification in this report, the dependency status is that effective at the time the benefit period was established. However, claimants may revert from single to dependency or vice versa during the currency of the benefit period.

Duration Authorized.—For regular benefit the formula provides one week of benefit for every two weeks of contributions within the prior 104 weeks. The maximum is thus 52 weeks. However, in circumstances such as outlined above in paragraph 2(b) "qualifying conditions" regular benefit, only the contributions acquired in the interval over which the 24 week requirement applies are considered for application of the formula. Hence the minimum, while 15 weeks for those with the bare requirements, may be as low as 12 weeks where the 24 week provision applies.

For seasonal benefit Class A, the formula allows 5 weeks of benefit for every 6 contribution weeks in the qualifying interval. The minimum is 13, or the number of weeks remaining to mid-May, whichever is the shorter.

The duration on Class B claims is the number of weeks of regular benefit authorized on the period terminating since the previous mid-May, subject to the cut-off date for paying seasonal benefit.

Weeks Paid.—This is the estimated number of complete weeks, based on "weekly rate" and "amount of benefit paid" to each claimant whose benefit period terminated in the interval covered by this report. The number of weeks paid as recorded in this report should not be interpreted as the weeks paid in that particular calendar year since they include all weeks paid on these claims, even though some were for the previous year. However, the discrepancy in totals is usually not large. For example, in 1966, the Monthly Statistical Report on the Operation of the Act records 12 million compensated weeks of regular and seasonal benefit. In the context of this report, this figure was 11 million. The annual total of monthly data include partial weeks.

whereas as indicated in the opening sentence of this paragraph, weeks paid are "estimated complete weeks".

Amount of Benefit.—As recorded on the benefit periods terminated during 1966.

Average Weekly Rate Compensated.—This is a function of the "amount paid" and the number of "estimated complete weeks" as discussed above. It thus represents average compensation for a full week of benefit. This is a different concept from that in the Monthly Statistical Report on the Operation of the Act which does not make any correction for partial weeks.
