REVIEW OF 1967

A seventh consecutive year of economic expansion carried the Gross National Product¹ to a level of \$62.1 billion in 1967, an increase of 6.8 per cent following the exceptionally large advance of 11.3 per cent of the previous year. Prices continued to rise, but at a somewhat lower rate than in 1966—3.9 per cent compared with 4.5 per cent. The gain in real terms declined to 2.8 per cent from 6.5 per cent in 1966. For the year as a whole, the general profile of the Canadian economy was one of a widespread easing of demand pressures.

In May 1967 the Labour Force² totalled 7.7 million, an increase of 330,000 (4.5 per cent) over May 1966. Employment rose by 273,000, 264,000 of this increase being in the non agricultural segment of the labour force. Unemployment rose by 57,000. The rate of unemployment rose to 3.9 per cent from 3.3 per cent in May 1966.

Persons Covered By Unemployment Insurance

On June 1, 1967 the number of persons covered by the Unemployment Insurance Act was estimated at 4.7 million, an increase of 250,000 (5.5 per cent) from the year before. Part of this increase was accounted for by the extension of coverage to certain agricultural workers as of April 1, 1967.

The regional distribution of the insured population remained unchanged over the past 5 years. Ontario ranked highest with 40 per cent followed by Quebec (28 per cent), the Prairies (13 per cent), British Columbia (10 per cent), and the Atlantic Region (8 per cent).

Females accounted for less than a third of the insured population but one half of the increase over last year. The proportion of women has increased from 28 per cent in 1963 to 31 per cent in 1967. During the same period the proportion of women in the labour force has increased from 27 to 31 per cent while their participation rate³ has risen from 29 to 34 per cent.

The manufacturing industry accounted for the largest proportion (36 per cent) of the insured population. Nearly 90 per cent of the insured were concentrated in five industries—manufacturing, trade, services, transportation and construction. Representation in other industries was small.

Trade, finance and services accounted for 60 per cent of the females but only one quarter of the males. Forty per cent of the men (30 per cent of the women) were in manufacturing. Over 11 per cent of the men were in the construction industry.

¹ "National Accounts, Income and Expenditure", DBS Catalogue No. 13-001.

² "The Labour Force", DBS Catalogue No. 71-001.

³ The labour force as a percentage of the population 14 years of age and over.

Nearly one half of the insured were classified as production⁴ workers and labourers—occupations which included 60 per cent of the males, 23 per cent of the females. Two-thirds of the women (20 per cent of the men) were in the clerical, sales and service occupations which accounted for one third of the insured.

Nearly one half of the insured under 20 years of age were females. Teenagers accounted for 9 per cent of the females, 5 per cent of the males. Almost one quarter of the insured over the age of 54 were women. Ten per cent of the women and 15 per cent of the men were in this age group which comprised 14 per cent of the total. Approximately 60 per cent of the insured, male and female were between 25 and 54 years of age.

Benefit Periods Established

There are two types of benefit periods that can be established—regular and seasonal. The total number of benefit periods established in 1967 totalled 1.2 million, the highest since 1963 when the total was 1.3 million.

Regular benefit periods have been increasing for the last 2 years. The number established in 1967 (955,000) was the largest since 1963 (942,000). On the other hand, seasonal benefit periods have been decreasing each year; in 1967 the number was 250 thousand, 110,000 fewer than in 1963.

Chart 1 shows the historical pattern of benefit periods established since 1942.

Regular benefit.—In 1967 there were 955,000 claims established for regular benefit. This was slightly higher than the number in 1963, sixteen per cent more than in 1966 and 20 per cent more than the five year low of 1965.

Over the past five years there has been little change in the regional distribution of regular benefit periods established. Quebec and Ontario account for approximately one third each with the remainder divided almost equally among the other three regions. Quebec and Ontario accounted for 80 per cent of the 134,000 increase over 1966. Small increases occurred in the other regions.

Since 1963 there has been little change in the industrial composition of claimants establishing benefit periods. Over half of the claimants were from the manufacturing and construction industries. Transportation, trade and services each accounted for 10 per cent. The per cent distribution of the increase over 1966 of 134,000 claims established was in line with the industry distribution. Nearly 90 per cent of the increase in the manufacturing industry was concentrated in Quebec and Ontario.

⁴ This group "Craftsmen, production and other related workers" includes occupations such as tailors, carpenters, mechanics, longshoremen, jewellers, millers, bakers, etc.

Production workers established 40 per cent of the benefit periods and accounted for 55 per cent of the increase over 1966. Quebec and Ontario accounted for 80 per cent of the increase among these workers. Approximately 20 per cent of claimants were classified as labourers, who accounted for 16 per cent of the increase. The clerical occupation accounted for 10 per cent of the claims and the same proportion of the increase.

The age distribution of claimants has not varied over the past 5 years. Eight per cent are teenagers; one half are under 35 years of age; one fifth are between the ages of 35 and 44 and one quarter between 45 and 64 years of age.

Three quarters of the claimants were males. While one quarter of the men were under 25 years of age, one third of the women were in this age group. Two thirds of the men and three-quarters of the women were less than 45 years old. Approximately 60 per cent of all the claimants were married. A higher proportion of male than female claimants were single. One half of the claimants who were either divorced, widowed or separated were women.

Forty-three per cent of the claimants establishing a regular benefit period had dependants. Ninety-five per cent of these were male. Two thirds of the male claimants with dependants were eligible for benefit at the maximum rate compared to only 18 per cent of females. Of those claimants without dependants, 50 per cent of the males and 15 per cent of the females were eligible for the maximum rate. Nearly one half of all claimants were claiming at the maximum rate.

The number and proportion of all claimants eligible for benefit at the maximum rate has been increasing annually. This proportion has increased from 30 per cent in 1963 to 48 per cent in 1967. From 1963 to 1967 the number of benefit periods established rose by 13,000; those at the maximum rate increased by 178,000. Ninety per cent of the increase over 1966 was at the maximum benefit rate. The observed increase in the number and proportion of claimants eligible for maximum benefit reflects the increase in average weekly wages and salaries⁵ which has been characteristic of recent years.

Benefit Periods Terminated

Regular benefit.—A benefit period is terminated either by exhaustion or by lapsing. The interval during which benefit may be paid on a regular benefit period may not extend beyond 52 weeks.⁶ If a claimant draws all the benefit to which he is entitled within those 52 weeks, his benefit period terminates by exhaustion, otherwise it terminates by lapsing.

⁵ "Employment and Average Weekly Wages and Salaries", DBS Catalogue No. 72-002.

⁶ Under the "Training Allowances Act—1966" the benefit period of an insured person may be extended if he (or she) is in receipt of a training allowance. The benefit period is extended by the amount of time the person is undergoing training, but in no event can the benefit period extend beyond 156 weeks.

The average number of both benefit weeks and amount paid increased over 1966, reflecting the higher level of unemployment in Canada. An average of \$315 was paid on benefit periods terminating in 1967 (\$292 in 1966). Duration averaged 12 weeks (11.3 in 1966)—21.6 (20.8) weeks on exhaustions and 8.9 (8.6) weeks on benefit periods that lapsed. One quarter of the regular benefit periods terminated by exhaustion. However, for those claimants who received benefit for more than 12 weeks, the exhaustion ratio was greater than 50 per cent.

As has been the case during the past 5 years the average duration and benefit paid in the Atlantic provinces were both well above the national average. At the national level the average number of weeks paid was less than 40 per cent of the average number authorized; in the Atlantic region it was over 50 per cent. Newfoundland continues to rank first in the average duration of benefit, average amount paid, exhaustion ratios, and utilization ratios i.e. average weeks paid expressed as a percentage of average weeks authorized.

The age distribution of claimants terminating benefit periods has remained unchanged since 1963. For claimants over the age of 64 benefit experience is significantly different from others. For this age group the average duration of benefit paid was 25 weeks for men, 24 weeks for women. This compares with an overall average duration of 11 weeks for men, 15 weeks for women. For men the average number of weeks paid was 35 per cent of weeks authorized, for women 44 per cent. For the age group 65 years and over these proportions were 73 per cent for males, 63 per cent for females. Nearly one half of the claimants over the age of 64 exhausted their benefit.

Seasonal benefit.—A seasonal benefit period may be established during the interval of the week in which December 1 occurs and the Saturday of the week in which May 15 falls. At the end of this period a seasonal benefit period is terminated automatically by lapsing. A seasonal benefit period is terminated by exhaustion in the same way as a regular benefit period.

In 1967, 250,000 seasonal benefit periods were established. This was 2 per cent less than in 1966 and 30 per cent fewer than in 1963. In 1963, twenty-eight per cent of benefit periods established were seasonal; in 1967 this proportion declined to 20 per cent. The reduction in the number and proportion of seasonal benefit periods over the past 5 years reflects improved employment opportunities during the winter months when seasonal benefit is operative.

The diversity in the economies of the various regions is reflected in the statistics on seasonal benefit. The more highly industrialized provinces of Quebec and Ontario accounted for two thirds of the regular benefit periods established but only one half of the seasonal. The less industrialized Atlantic provinces accounted for 11 per cent of the regular but 27 per cent of the seasonal benefit periods. The reduction from 1963 of 110,000 seasonal benefit

periods was proportionately less in the Atlantic provinces where primary industries are more significant in their overall economy.

Since 1963 the proportion of female claimants has increased from 20 to 26 per cent. Two thirds of the females were married, twenty per cent were single and 10 per cent were separated, widowed or divorced. For men these proportions were one third for single, one half for married and 5 per cent for other. Males accounted for 93 per cent of the 110,000 reduction from 1963 in the number of seasonal benefit periods established. The reduction of 2 per cent from the 1966 total was not shared by both sexes. While the number of men decreased by 5 per cent, the number of women rose by 6 per cent.

The proportion of teenagers has increased from 7 per cent in 1963 to 11 per cent in 1967. Over the 5 year period this was the only age group showing a growth in the number of periods established. For claimants over the age of 64 there was no change among females while for males there was a slight reduction.

The decrease from 1966 among men was reported in all age groups except those over the age of 64 whose numbers remained unchanged. Among women increases occurred in all age groups.

The industrial composition of seasonal benefit periods remained unchanged. Manufacturing and construction accounted for 40 per cent of the claims, the primary industries for 20 per cent, and transportation, services and trade for 10 per cent each. For regular benefit, the primary industries comprised 10 per cent, manufacturing and construction 50 per cent of the periods established. While 20 per cent of the benefit periods established were seasonal, this proportion was 36 per cent for the primary industries.

On an occupational basis, production workers and labourers comprised over 50 per cent of the claimants. A considerable number of claimants were in the clerical and service occupations.

All industries shared in the 5 year reduction. Decreases in the primary industries were greater than the overall rate of 30 per cent. The 30 per cent rate of reduction was exceeded in the following occupations — loggers, miners, transport and sales. Production workers and labourers accounted for more than one half of the decrease.

The decrease from 1966 did not occur in all industries or occupations. An increase in the number of production workers is associated with an 11 per cent increase in claimants from the manufacturing industry and a small increase in construction. Small increases also occurred in some occupations associated with the primary industries.

As has been the case for the past 5 years, approximately 40 per cent of the claimants for seasonal benefit had dependants. Of these, 41 per cent were eligible for the maximum rate. For those without dependants, this proportion was 20 per cent.

In 1963 sixteen per cent of the claimants were eligible for the maximum rate. This proportion increased to 29 per cent in 1967. Although the number of seasonal benefit periods established declined by 110,000 since 1963, the number of claimants drawing benefit at the maximum rate increased by 15,000.

Seasonal benefit paid averaged \$252 for 9.9 weeks. These averages were exceeded in each of the Atlantic provinces where the proportion of benefit periods that terminated by exhaustion was higher than the overall rate of 50 per cent. For claimants over the age of 64 the average duration of benefit and the proportion exhausting benefit were higher than for any other age group.

There are two classes of seasonal benefit, Class A and Class B. In order to qualify for Class A, a claimant must prove at least 15 contribution weeks since the prior March 31. A claimant who does not qualify for Class A can qualify for Class B benefit if he had a regular benefit period terminate since the previous mid-May. Only one seasonal benefit period may be established by a claimant during the period December 1 to mid-May, the interval during which the provisions for seasonal benefit are operative.

Of the 110,000 reduction from 1963 in all seasonal benefit claims established, Class A accounted for 87,000 (nearly 80 per cent). The number of Class B claimants was reduced by 20 per cent, Class A by 36 per cent.

The number of seasonal benefit periods was 6,000 less than in 1966. A reduction of 15,000 in Class A claimants was partially offset by a 9,000 increase in Class B. For Class A claimants, Ontario was the only province where the number increased. In Manitoba and Saskatchewan, a slight decrease in Class B claimants occurred.

Average duration and benefit paid have increased slightly over 1966 for both Class A and Class B. Average weekly payments increased from \$24.60 to \$25.47 for Class A, and from \$24.97 to \$25.71 for Class B.

Sixty-two per cent of the claimants were eligible for Class A benefit. They received 68 per cent of the benefit. In the Atlantic region, Class A accounted for three quarters of the claimants and drew 85 per cent of the benefit in that region.

One third of the Class A claimants were in the Atlantic region. They received 40 per cent of the Class A benefit, the same proportion that was paid to Quebec and Ontario which accounted for 47 per cent of the claimants.

The Atlantic provinces which accounted for 40 per cent of Class A benefit paid received only 16 per cent of Class B benefit. Claimants in Ontario received 33 per cent of the Class B benefit but only 18 per cent of Class A.

APPENDIX B

Technical Note

The Unemployment Insurance Act is compulsory for workers engaged in employment not specifically denoted as "excepted employment". One of the elements indigenous to the concept of insurable employment under the Act is a contract¹ of service or apprenticeship, either expressed or implied, written or oral. Contributions are required for both employer and employee (in equal amounts), augmented by a 20 per cent grant from the Consolidated Revenue Fund. All administrative costs are paid out of moneys appropriated by Parliament.

Persons² employed in hunting, trapping, private domestic service and teaching are excluded, as are employees of a provincial public service³ or municipality.³ Members of the Canadian Armed Forces and of police forces³ are also excluded. Medical, nursing, technical and domestic staff in hospitals³ or charitable institutions³ not carried on for profit do not

¹ It follows that the class of worker coming within the purview of the Act is the "paid-worker", the single exception being the extension of coverage to the Fishing industry, April 1957. Because the majority of workers in this industry are self-employed, special regulations were required to adapt the plan to the particular conditions in that industry.

² This list is not intended to be exhaustive; those interested in more exact details should consult the Act and Regulations.

³ Unless insured under special arrangements with the government (or employer) concerned.

contribute, neither do private duty nurses. An earnings ceiling restricts contributions to employees earning \$5,400.00 or less except where the term of employment is hourly, daily, or piece rate in which case contributions are required, regardless of the amount of earnings.

When a person separates from employment, his claim is first examined in the light of the contribution requirements as defined under "Qualifying conditions" for Regular Benefit. Where these are met, the average weekly rate, the weeks of entitlement, together with the total entitlement, in dollars, are calculated. Because the Act allows for compensation of partial weeks of recorded unemployment, the dollar value of total benefit entitlement is essential. Once these values are established, the claim is then adjudicated to ensure that the claimant has fulfilled all the other conditions of qualification for benefit.

During the 5½ months commencing with the first week of December, seasonal benefit is payable to certain classes of claimants unable to prove the regular contribution requirements. Classes of claimants eligible for seasonal benefit are listed under the paragraph "qualifying conditions" - seasonal benefit. Claimants must fulfill the conditions as for regular benefit except those with respect to contributions.

Glossary of Terms

Insured Population.—The number of persons estimated as in contact with the Unemployment Insurance Commission either as contributors or as claimants at approximately June 1. Estimates are based on a 10% sample.

Regular Benefit.—A claim for regular benefit may be filed at any time. To be eligible for this benefit, a claimant is required to prove minimum attachment to insured employment as indicated below under "Qualifying Conditions".

Seasonal Benefit.—Applicable only during the interval commencing with the week in which December 1 falls and terminating on the Saturday of the week in which May 15 occurs. During this period of the year, when insufficient contributions are recorded on a claim for regular benefit, it is automatically considered under the seasonal benefit provisions.

Benefit Period.—This is simply a term used to denote the existence of benefit rights. There are regular benefit periods and seasonal benefit periods.

Establish.—Within the context of this report the term "establish" refers only to persons who have fulfilled the minimum contribution requirements entitling them to either regular or seasonal benefit.

Terminate.—A benefit period terminates when the right to benefit no longer exists. Benefit periods terminate either by lapsing or by exhaustion.

Lapse.—Regular benefit rights lapse one year from the date established, unless exhausted earlier. All rights to seasonal benefit lapse with the closing date of the interval during which these benefits are payable.

Exhaust.—When a claimant receives all the benefit to which he is entitled, the benefit period terminates automatically by exhaustion.

Qualifying Conditions

Regular Benefit

- (1) Where there has been no previous benefit period established within the prior 104 weeks, a claimant is required to prove 30 weeks of insurable employment within that interval and at least 8 of these weeks must fall within the year prior to the current claim.
- (2) Where benefit entitlement has been established within the prior 104 weeks, the 30 week requirement remains, but additional tests are applied as in (a) and (b).
 - (a) The cycle to which the 8 week test applies may be less than one year. If, for example, a **regular** benefit period was established at any date within the year prior, then the 8 weeks must have occurred since that date.
 - (b) Where entitlement to either regular or seasonal benefit has been established within the prior 104 week interval, then 24 of the 30 contribution weeks must have been recorded **either** since the date the previous claim was established **or** within the most recent 52 weeks whichever is the longer interval.

Seasonal Benefit

In order to qualify for Class A, a claimant must prove at least 15 contribution weeks since the prior March 31. It follows, then, that entitlement under Class A can only be set up between the weeks of December 1 and March 31. To be eligible for Class B, a regular benefit period must have terminated since the previous mid-May.

Claimants are tested, first, under Class A, only those failing the 15 week requirement being eligible for Class B. Seasonal benefit periods established subsequent to the end of March are exclusively Class B.

During the 5½ months in which the seasonal benefit provisions are operative, a claimant is eligible only once.

Weekly Rate.—This is an amount computed at the time the benefit period is established. For regular benefit, the rate is based on the average contributions (which in turn are determined by insured earnings) during the most recent thirty contribution weeks referred to under "Qualifying Conditions". As indicated in Appendix A, Columns 3 and 4, the rate will be higher for those with a dependent. The amount paid weekly, to a claimant, however, may be less than the maximum for his average earnings. Partial weeks of benefit may be associated with partial employment or spells of non-availability. Columns 5 and 6 of the Schedule in Appendix A illustrate the operation of the allowable earnings provision for each weekly rate. An example will serve to illustrate this: if a claimant eligible for \$36.00 a week benefit earns \$18.00 or less in a week

there will be no reduction in the benefit on that account. However, should the earnings be \$20.00, only \$34.00 benefit would be paid.

The Act contains a provision which ensures that a rate is not unduly reduced, relative to a prior claim, because of intermittent or partial earnings. For example, when a claim is being computed it may be found that, on the basis of the earnings during the qualifying period, the weekly rate should be \$26.00. If, however, this person had a claim within the previous 104 weeks on which the weekly rate was \$36.00, then by virtue of Sec. 47 (2a) of the Act, the weekly rate on the new claim would become \$33.00.

For seasonal benefit Class A, the benefit rate is based on the average contributions since the preceding March 31.

For seasonal benefit Class B, the benefit rate is that of the regular benefit terminated since the previous mid-May, subject to redetermination on the basis of a change in dependency status.

Dependency Status.—Benefit is payable either at the single or dependency status. To establish dependency status a claimant is (a) a man whose wife is wholly or mainly maintained by him (b) a married woman who has a husband dependent on her (c) a person who maintains one or more children under 16 years of age or who supports a person related by blood, marriage or adoption, in a self-contained domestic establishment. Commencing 19 February 1967, a person earning any income in excess of \$25 a week is not considered as being a claimant's dependant.

For purposes of classification in this report, the dependency status is that effective at the time the benefit period was established. However, claimants may revert from single to dependency or vice versa during the currency of the benefit period.

Duration Authorized.—For regular benefit the formula provides one week of benefit for every two weeks of contributions within the prior 104 weeks. The maximum is thus 52 weeks. However, in circumstances such as outlined above in paragraph 2(b) "qualifying conditions" regular benefit, only the contributions acquired in the interval over which the 24 week requirement applies are considered for application of the formula. Hence the minimum, while 15 weeks for those with the bare requirements, may be as low as 12 weeks where the 24 week provision applies.

For seasonal benefit Class A, the formula allows 5 weeks of benefit for every 6 contribution weeks in the qualifying interval. The minimum is 13, or the number of weeks remaining to mid-May, whichever is the shorter.

The duration on Class B claims is the number of weeks of regular benefit authorized on the period terminating since the previous mid-May, subject to the cut-off date for paying seasonal benefit.

Weeks Paid.—This is the estimated number of complete weeks, based on "weekly rate" and "amount of benefit paid" to each claimant whose benefit period terminated in the interval covered by this report. The number of weeks paid as recorded in this report should not be interpreted as the weeks paid in that particular calendar year since they include all weeks paid on these claims, even though some were for the previous year. However, the discrepancy in totals is usually not large. For example, in 1967, the Monthly Statistical Report on the Operation of the Act records 13.8 million compensated weeks of regular and seasonal benefit. In the context of this report, this figure was 11.9 million. The annual total of monthly data include partial weeks,

whereas as indicated in the opening sentence of this paragraph, weeks paid are "estimated complete weeks".

Amount of Benefit.—As recorded on the benefit periods terminated during 1967.

Average Weekly Rate Compensated.—This is a function of the "amount paid" and the number of "estimated complete weeks" as discussed above. It thus represents average compensation for a full week of benefit. This is a different concept from that in the Monthly Statistical Report on the Operation of the Act which does not make any correction for partial weeks.
