DOMINION BUREAU OF STATISTICS

DEMOGRAPHY BRANCH

Dominion Statistician:

R. H. Coats, B.A., F.S.S., (Hon.), F.R.S.C.

Chief, Demography Branch:

E. S. Macphail.

This Bulletin gives a preliminary report on Births, Deaths and Marriages for the month of December, 1929, for the nine provinces in Canada.

In comparing the figures for December, 1929, with those of the same month for previous years, it should be remembered that for previous years the reports represent final figures while those for 1929 are provisional. Attention is further directed to the fact that previous to 1926 the province of Quebec was not included in the Registration Area.

BIRTHS

The total number of births reported for the nine provinces of Canada in December, 1929, was 19,381, as against 19,084 for December of last year. The only provinces which showed increases were New Brunswick, Quebec and Ontario.

There were altogether 19,784 confinements. Single confinements numbered 19,539, resulting in 18,919 children born alive and 620 children born dead. Twin births numbered 242; in 220 cases both infants were born alive while in 13 cases one only was born alive and in 9 cases both were born dead. There were three sets of triplets, in which all the children were born alive.

Stillbirths reported in December were distributed as follows: Prince Edward Island 3; Nova Scotia 22; New Brunswick 21; Quebec 206; Ontario 244; Manitoba 60; Saskatchewan 40; Alberta 34; British Columbia 21; making a total of 651. Stillbirths are not counted either as births or deaths.

MORTALITY

MATERNAL MORTALITY - The number of maternal deaths in each province is given by certain age groups in Table 4. The maternal mortality rate computed on the basis of 1,000 living births was 5.9 for December, 1929. The rates for the same month in the preceding years were as follows: 1928, 5.9; 1927, 6.7; 1926, 6.4; 1925, 6.0; 1924, 5.7; 1923, 6.2; 1922, 5.7; and 1921, 5.0. As already indicated the province of Quebec previous to 1926 was not included in the Registration Area.

INFANT MORTALITY - In Table 5 mortality of children under one year of age is given for the principal causes of death. Of the total number of infant deaths reported for December, 85 per cent were attributable to the causes of death listed in the table. The mortality amongst children under one year of age was 84.9 per 1,000 live births; the rate for males was 92.1 per 1,000 and for females 77.1 per 1,000.

GENERAL MORTALITY - Table 6 gives deaths among the population generally from certain specified causes, by provinces, while Table 7 gives similar information for cities of 30,000 population and over.

MARRIAGES

The number of marriages reported is shown by totals and percentages in Table 8.
