PREFACE

Each Spring the government tables its Main Estimates in the House of Commons for the new fiscal year commencing April 1st. The Main Estimates give an overview of the broad spending programs of departments and agencies. Scientific expenditures are provided for, but may not be separately displayed in published departmental estimates. This statistical publication fills that gap.

To assist readers to obtain an overall appreciation of federal scientific expenditures, this report presents science statistics assembled during the complicated process which recently culminated in the tabling of Main Estimates 1982/1983. The government's support of science provided through other means, e.g. through tax incentives, is not included in these statistics.

Many people from many departments and agencies contributed in the preparation of this report, and in particular, the Financial Officers of departments, on whom fell the onus for providing details of both the historical and the planned science expenditures which this report lists. The Treasury Board Secretariat made it possible for these statistics to be obtained in conjunction with the budgetary machinery, by incorporating as addenda to the Main Estimates submissions the collection of federal science statistics conducted jointly by Statistics Canada and MOSST.

The staff of the Science Statistics Centre, a Statistics Canada satellite office located with MOSST, is owed special thanks. The Centre worked closely with MOSST and with departmental contacts to ensure that the resulting data base would be accurate, consistent and timely. The important contribution of the Interdepartmental Committee on Scientific Expenditures to the process of improving definitions and the accuracy of reporting is also acknowledged.

Finally, thanks are due to the Research and Information Services Division of MOSST, whose programming work made possible both the attractive appearance and the convenient reproduction of the tables presented in this statistical report.

APPENDIX132

NOTES FOR READERS

The data in this publication are based on program budgetary expenditures presented to Parliament for approval in the 1982/83 Main Estimates. The tables display both the expenditures and the personnel resources applied to activities in the natural and human sciences. This report is a statistical companion publication to MOSST's more descriptive report Federal Science Activities 1982/83. As the data are designed primarily for use by those with some knowledge of the government's scientific activities, a minimum of explanatory material accompanies the statistics.

This report is organized into four main sections and an appendix. The first section presents combined data on the natural and human sciences, the second data on the natural sciences alone and the third data on the human sciences alone. The fourth section presents expenditure data corresponding with the cabinet policy and expenditure committees within which the various departments and agencies are grouped. The appendix contains definitions of terms used in the categorization of science expenditures, and some notes on limitations of the data surveys. Readers are urged to read this appendix before drawing their own conclusions from the data.

The data used for this publication are derived from the 1982/83 Main Estimates survey of expenditures and personnel resources in the natural and human sciences, which covers the fiscal years 1980/81, 1981/82 and 1982/83. The data, therefore, include the actual expenditures recorded in the base year 1980/81, those forecast for the current year 1981/82 and those for which funding authority is requested in estimates for the new fiscal year, 1982/83.

Personnel categories are measured in full-time equivalents, that is, the number of person-years cumulatively devoted to scientific activities by the employees engaged in these activities, whether on a continuing, term, casual or seasonal basis. The 1980/81 data are the actual totals of the person years used in that period, while the 1981/82 data are calculated from the actual person-years up to September 30, 1981, combined with the totals forecast and authorized until March 31, 1981. The 1982/83 data reflect the authorized person year totals indicated in the Main Estimates.

Users of this report may wish to note that "non-program" costs are not included in the expenditure data in this report. (See the appendix for an explanation of this exclusion). Data which do include "non-program" costs are published in the Statistics

Canada publication, The Annual Review of Science Statistics (Cat. No. 13-212), and in issues of the Service Bulletin (Cat. No. 13-003).

Additional sub-divisions or rearrangements of the data totals presented in this report are often available on request to the Program Review and Assessment Division of MOSST.

Data for federal departments, agencies and programs appear in the tables in the order in which they appear in the Main Estimates for 1982/83. The various federal agencies are listed under the portfolios of the Ministers through whom they report to Parliament -- for example, Statistics Canada appears under the Supply and Services portfolio. Program expenditures are listed in the tables and summed to show departmental totals, but non-departmental agencies are not included in departmental totals. For example, the amount shown opposite the Department of Agriculture (AGR) is the sum of the corresponding amounts opposite the four programs commencing with AGR- (AGR-ADM, AGR-DEV, etc), but expenditures under the Canadian Dairy Commission (CDC) and the Canadian Livestock Feed Board (CLFB) are not included in the departmental (AGR) total.

The departmental and program abbreviations used are explained in the following pages.

AGRICULTURE

AGR	Department
AGR-ADM	Administration
AGR-DEV	Agri-Food Development Program
AGR-RI	Agri-Food Regulation and Inspection
AGR-CGC	Canadian Grain Commission
CDC	Canadian Dairy Commission
CLFB	Canadian Livestock Feed Board

I SCOPE AND LIMITATIONS OF THE DATA

The expenditure data for scientific activities controlled by federal departments and agencies provided in this document correspond to the budgetary expenditures by program presented in Main Estimates for the approval of Parliament. As a consequence, the following kinds of costs or expenditures are not included:

- a) expenditures by federal agencies which do not receive budgetary appropriations, e.g., Petrocan, Canadian National Railways, Air Canada.
- b) non-budgetary expenditures for advances, loans, etc.
- c) "non-program" costs, i.e., services provided by other departments, accommodation costs, the portion of administration costs attributable to scientific activities where a separate administration program exists.

Depending on the purpose of the analysis, it may or may not be appropriate to include non-program costs. For budgetary analysis and decision-making it is preferable to deal with direct program expenditures only, thereby providing a consistent base for comparing expenditures on scientific and technological (S&T) activities with other types of expenditures in the federal sector.

If the purpose of the analysis is to compare the magnitude of the federal expenditures on S&T activities with those in other sectors in the country and in other countries, then it is preferable to include non-program costs. The sum of direct expenditures plus non-program costs then represents the total cost of the federal S&T effort. With caution, the resulting data may be compared with the S&T effort in industry, where all direct and indirect costs are usually reported. Such "total cost" data are reported by Statistics Canada in The Annual Review of Science Statistics (Cat. No. 13-2-12) and various issues of the Service Bulletin (Cat. No. 13-003). The federal intramural expenditures reported in these latter publications will thus be greater than the same category reported herein. The extramural expenditures, however, are not affected and will be the same in both sets of publications.

II DEFINITIONS

Federal departments and agencies in receipt of budgetary appropriations are requested to identify those resources reported in Main Estimates which are to be used in scientific and technological (S&T) activities in both the natural and the human sciences. The basic reporting units are the budgetary programs used in presenting the Main Estimates.

In the text which follows, the two major fields of science, the natural sciences and the human sciences, and the two kinds of S&T activities scientific research and experimental development and related scientific activities are described, followed by a description of intramural and extramural performance of S&T activities, definitions of the performance sectors and a discussion of the funding mechanisms for extramural performance. Detailed definitions of research and experimental development and of the various related scientific activities for the natural sciences and for the human sciences are then provided and the Appendix closes with the definitions concerning personnel resources.

The definitions used in collecting the data for this report are essentially the same as those used by the OECD in its "Frascati Manual" and by UNESCO in its "Manual for Statistics on Scientific and Technological Activities".

A. NATURAL AND HUMAN SCIENCES

With respect to the two major S&T fields, the term, natural sciences, embraces the disciplines of study concerned with understanding, exploring, developing or utilizing the natural world. Included are the engineering, mathematical, life and physical sciences. The term, human sciences, is to be regarded as synonymous with social sciences and humanities and thus embraces all disciplines involved in studying human actions and conditions and the social, economic and institutional mechanisms affecting humans. Included are such disciplines as anthropology, demography, economics, geography, history, languages, literature and linguistics, law, library science, philosophy, political science, psychology, religious studies, social work, sociology, and urban and regional studies.

In some situations it may be difficult to decide whether an activity falls in the natural or in the human sciences. Nevertheless, an assignment must be made, and respondents are asked to consider the dominant orientation of the work and the nature of the expertise of the personnel involved.

B. SCIENTIFIC AND TECHNOLOGICAL ACTIVITIES

There are two main categories of scientific and technological activities (S&T):

- i) (Scientific) research and experimental development (R&D), which is defined as creative work undertaken on a systematic basis in order to increase the stock of knowledge, including the knowledge of man, culture and society, and the use of the stock of knowledge to devise new applications.
- ii) Related scientific activities (RSA), which are defined as those activities which complement and extend R&D by contributing to the generation, dissemination and application of scientific and technological knowledge. The kinds of related scientific activities for the two main fields of science are enumerated below and more fully described later:

<u>Natural Sciences</u>	<u>Human Sciences</u>
Scientific data collection	General pupose data collection
Scientific information services	Scientific information services
Technical feasibility studies	Socio-economic feasibility studies
Education support	Education support
Museum services	Museum services
Testing and Standardization	Operations and Policy Studies

C. INTRAMURAL AND EXTRAMURAL PERFORMANCE

Where the S&T activities are managed and carried out primarily by federal government employees they are classified as intramural S&T. Even where major components of the project are provided by outside agencies, such as computer services, analytical services, provision of ship and airplane services, construction of laboratory, test or prototype equipment, if the planning, supervision, reporting, etc., are directly controlled by in-house personnel, then the activity is considered to be intramural. This also applies to S&T activities carried out by a department or agency on behalf of another federal department or agency on a cost recovery basis.

On the other hand if the management and conduct of an S&T activity is entrusted to a non-federal organization it is classified as being extramurally performed. The six extramural performance sectors used in surveying S&T expenditures by the federal government are: Canadian industry, Canadian universities, Canadian non-profit institutions, provincial and municipal governments, foreign performers, and other performers.

Intramural performance includes:

- scientific activities carried out by personnel of units assigned to the programs;
- the acquisition of land, buildings, machinery and equipment for scientific activities;
- the administration of scientific activities by program employees;
- the purchase of support services such as EDP and travel.

The intramural expenditures reported for scientific activities are those direct costs associated with scientific programs. These costs include that portion of a program's contribution to employee benefit plans (e.g., superannuation) which is applicable to the scientific manpower within the program. Non-program ("indirect") costs, such as the value of services provided by other departments without charge and accommodation provided by the reporting program are excluded.

Canadian industry - business and government enterprises including public utilities and government-owned firms. Industrial research institutes located at Canadian universities are considered to be in the university sector.

Canadian universities - including affiliated institutes owned, administered or staffed by universities.

Canadian non-profit institutions - charitable foundations, voluntary health organizations, scientific and professional societies, and other organizations not established to earn profits. Non-profit institutions primarily serving or controlled by another sector should be included in that sector (e.g. the Pulp and Paper Research Institute is in Canadian Industry).

Canadian provincial and municipal governments - departments and agencies of these governments. Government enterprises, such as provincial utilities are included in the Canadian industry sector, and hospitals in the Canadian non-profit institutions sector.

Foreign performers - all foreign governments, foreign companies (including foreign subsidiaries of Canadian firms), inter-

national organizations, non-resident foreign nationals and Canadians studying or teaching abroad.

Other performers - individuals or organizations not belonging to any of the above sectors. This includes provincial research councils and foundations.

D. CONTRACTS, GRANTS AND CONTRIBUTIONS

The federal government uses three methods of funding extramurally-performed S&T activities:

- i) A contract is a legal agreement between two or more parties which will usually specify the nature and general objective of the S&T activity to be performed and the provision of the corresponding results according to an agreed schedule and cost.
- ii) A grant is an unconditional payment to a recipient and the government does not necessarily receive any services (information, goods, etc.) as a direct result. It is to be noted, however, that there may be eligibility conditions which prospective recipients must meet.
- iii) A contribution requires an agreement between the government and recipient specifying the terms and conditions under which funds will be paid to the recipient. In particular the payments are conditional on performance or achievement and the recipient's use of the funds provided is subject to audit.

In this report the term grants is used for both grants and contributions and data according to the method of funding extramural performance is collected only for R&D activities.

E. DEFINITIONS FOR THE NATURAL SCIENCES

Research and experimental development (R&D) - creative work undertaken on a systematic basis to increase the stock of scientific and technical knowledge or to discover new applications for existing knowledge. The central characteristic of R&D is an appreciable element of novelty and of uncertainty. The work is normally performed by, or under the supervision of, persons with postgraduate degrees in the natural sciences or engineering.

R&D is generally carried out by specialized R&D units. An R&D project however, may also involve the use of non-R&D facilities (e.g. testing grounds), the purchase or construction of specialized equipment and materials, and the assistance of other units. Costs of such items, attributable to the project, are considered R&D costs.

R&D units may also be engaged in non-R&D activities such as technical advisory services, testing, and construction of special equipment for other units. So far as is practical, the effort devoted to such operations is excluded from R&D.

On the other hand, R&D may be carried out by units normally engaged in other functions (e.g. a marine survey ship used for hydrological research, a geological survey team may be directed to work in a certain area in order to provide data for a geophysical research project). Such effort is part of an R&D project and again, so far as is practical, the costs are assigned to R&D expenditures.

Examples:

1. Routine autopsy on the causes of death is not research, but special investigation of a particular mortality in order to establish the side effects of certain treatments is research. Similarly, routine tests, such as blood and bacteriological tests, are not research, but a special program of blood tests in connection with the introduction of a new drug is applied research.
2. The keeping of daily records of temperature or of atmospheric pressure is data collection and not research. The investigation of new methods of measuring temperature is research as is the study and development of new systems and techniques for interpreting the data.

Research fellowships - awards to individuals for advances in research training and experience. Such payments are included as expenditures for R&D activities. Awards intended primarily to support the education of the recipients are reported as education support.

Scientific data collection - the gathering, processing, collating and analyzing of data on natural phenomena. These data are normally the results of surveys, routine laboratory analyses or compilations of operating records.

Data collected as part of an existing or proposed research project are costed against research. Similarly the costs of analyzing existing data as part of a research project are R&D costs, even when the data were originally collected for some other purpose. The development of new techniques for data collection is also considered a research activity.

Examples of scientific data collection are routine geological, hydrographic, oceanographic and topographic surveys; routine astronomical observations; maintenance of meteorological records; and wildlife and fisheries surveys.

Scientific information services - all work directed to recording, classifying, and disseminating scientific and technologi-

cal information. Included are the operations of scientific and technical libraries, S&T information and advisory services, the Patent Office, the publication of scientific journals and bibliographies, and the organizing of scientific conferences. Grants for the publication of scholarly works are also included.

General purpose information services or information services directed primarily towards the general public are excluded, as are teaching activities.

Testing and standardization - work directed towards the establishment of national and international standards for materials, devices, products and processes, the calibration of secondary standards and non-routine quality testing. The development of new measures for standards, or of new methods of measuring or testing, is R&D and is reported as such. Excluded is routine testing such as monitoring radioactivity levels or soil tests before construction.

Feasibility studies - technical investigations of proposed innovative engineering projects to provide necessary additional information for decisions on implementation. Excluded is routine work such as selection of road routes and bridge sites unless there are conditions which impose innovative solutions.

Educational support - grants to individuals or institutions intended to support the post-secondary education of students in technology and the natural sciences. The activity includes the support of foreign students in their studies of S&T at Canadian or foreign institutions. General purpose grants to educational institutions are excluded. Grants intended primarily to support the research of individuals at universities are either R&D grants or research fellowships.

Museum services - the collecting, cataloguing, and displaying of specimens of the natural world or of representations of natural phenomena. The scientific activities of natural history museums, zoological and botanical gardens, aquaria, planetaria and nature reserves are included.

The activity represents a systematic attempt to preserve and display items from the natural world; in some ways it could be considered an extension of scientific information services. Parks which are not primarily restricted reserves for certain fauna or flora are excluded.

Where practical, efforts of such institutions devoted to R&D or to other activities such as S&T information are excluded from museum services and assigned to those activities. The costs of providing entertainment and recreation to visitors are excluded (e.g. restaurants, children's gardens and nurseries).

Administration of extramural programs - the costs of identifiable units engaged in the administration of contracts and grants and contributions for scientific activities that are to be performed outside the federal government. These expenditures are broken down by the type of scientific activity supported, i.e., R&D or RSA.

F. DEFINITIONS FOR THE HUMAN SCIENCES

Research and experimental development (R&D) - creative work undertaken on a systematic basis towards the acquisition of new knowledge about man, his actions and his institutions, and the application of this knowledge in new ways.

R&D requires the acquisition of knowledge and not just information. New knowledge involves the integration of newly acquired information into existing hypotheses, the formulation and testing of new hypotheses or the re-evaluation of existing observations.

An R&D project generally has three characteristics:

- a substantial element of uncertainty, novelty and innovation;
- a well-defined project design;
- a report on the procedures and results of the project.

Examples:

1. Investigation of the factors determining regional variations in economic growth.
2. Studies of the effects of an urban development scheme on family group cohesiveness.
3. Investigation of the variables affecting the educational performance of children drawn from different social and ethnic groups.
4. Development of reward systems which take into account the differing motives, attitudes and perceptions of management and workers.

Both "research" and "development" are often used with different meanings in the government. For example, it is increasingly common to hear that a person is "researching" something (i.e. the person is looking for information about something). Similarly, there are many units with either research or development or both terms in their titles which are concerned

primarily with information gathering, speech writing, preparation of position papers or departmental organization. These are excluded from the scientific activity for R&D.

Research fellowships - awards to individuals for advanced research training and experience. Such payments are included as expenditures for R&D activities. Awards intended primarily to support the education of the recipients are reported as education support.

General purpose data collection - the routine gathering, processing, collating, analysis and publication of information on human phenomena using surveys, regular and special investigations and compilations of existing records. It excludes data collected primarily for internal administrative purposes (e.g. departmental personnel statistics) as well as the collection of data as part of an R&D project.

Data collected as part of an existing or proposed research project are costed against research. Similarly the costs of analyzing existing data as part of a research project are R&D costs, even when the data were originally collected for some other purpose. The development of new techniques for data collection is also considered a research activity.

Examples of general purpose data collection are the quinquennial censuses, and surveys of employment and production.

Scientific information services - the recording, classifying and disseminating activities of units concerned primarily with providing information for scientific activities in the social sciences and humanities.

Included are the operations of specialized libraries or national archives, the publication of scholarly journals and bibliographies, grants for the publication of scholarly works and the support of scientific and academic conferences.

General purpose information services or information services directed primarily towards the general public are excluded, as are teaching activities.

Economic and feasibility studies - investigations of the socio-economic characteristics and implications of specific situations. Such studies are generally limited to a specific problem and involve the application of established human science techniques and methodologies. Examples are a study of the viability of an iron foundry in a foreign country, or cost-benefit study of a proposed paper manufacturing centre in Manitoba.

Operations and policy studies - the analysis and assessment of departmental programs, policies and operations, the activities

of units concerned with the continuing analysis and monitoring of external phenomena (e.g. foreign economic statistics, defence and security information) as well as studies to provide an information base for policy development. The work is carried out by specialized units in some government departments, by consultants, by royal commissions and by task forces.

Education support - grants to individuals or institutions intended to support the post-secondary education of students in the social sciences and humanities. General purpose grants to educational institutions are excluded. The activity includes the support of foreign students in their studies of the social sciences at Canadian or foreign institutions.

Grants intended primarily to support the research of individuals at universities are either R&D grants or research fellowships.

Museum services - the collecting, cataloguing and displaying of specimens and representations relating to the history, social organization and creative efforts of man.

The activity represents a systematic attempt to preserve and display the works of man and to provide information on his works, history, and nature. The scientific activities of historical museums, archeological displays, and art galleries are included.

The costs of providing entertainment and recreation to visitors are excluded (e.g. restaurants, children's gardens and museums).

Administration of extramural programs - the costs of identifiable units engaged in the administration of contracts and grants and contributions for scientific activities that are to be performed outside the federal government. These expenditures are broken down by the type of scientific activity supported, i.e., R&D or RSA.

G. PERSONNEL RESOURCES

Data are also collected on the personnel resources devoted to or in support of intramurally-performed S&T activities. These resources included both scientific and technical personnel directly engaged in the S&T activities, such as scientific and engineering staff, technical staff, operational staff (e.g., field hands in agricultural research), and auxiliary staff such as secretaries, typists, administrative and financial staff. In regard to auxiliary staff there are two caveats:

- i) where the S&T activities are a part of the program being reported only the auxiliary staff relevant to the S&T activities are reported on a pro rata basis,
- ii) whenever financial and administrative support is provided from another program, that support is not allocated to the S&T resources for the program being reported.

Personnel resources are reported on an equivalent full-time basis. The unit used is person-years. Thus an employee working half-time on S&T activities is reported as 0.5 personyears.

Information on personnel appearing in this report is presented under the six occupational categories identified in the general classification system that applies to most public service positions:

1. Executive: refers only to the senior executive group. It is composed of positions, the incumbents of which are responsible for managing an agency and for providing advice on the development and conduct of government programs.
2. Scientific & Professional: groups engaged in the application of a comprehensive body of knowledge acquired through university graduation or groups in which membership in Canada is generally controlled by legal licensing bodies.
3. Administrative & Foreign Service: groups engaged in the planning, execution, conduct and control of programs serving the public interest, relations between Canada and other countries and the requirements of internal management in the Public Service of Canada.
4. Technical: groups engaged in the conduct of analytical, experimental and investigative duties in all the sciences and the performance of similar technical duties in which the requisite knowledge and skills are normally acquired through completion of secondary school education and specialised training.
5. Administrative Support: groups such as clerical and regulatory; communications; data processing; office equipment operation; secretarial, stenographic, typing, and telephone operation.
6. Operational: groups engaged in the performance of a craft or of unskilled work. It refers to groups such as correctional, general services, postal operations, and printing operations.
7. Military Personnel: members of the Canadian Forces engaged in scientific activities.
