# INVENTORIES AND SHIPMENTS IN MANUFACTURING INDUSTRIES 

## REVISED BASE SERIES <br> 1949-1951

## Reference Paper

No. 53

Published by Authority of
The Right Honourable C. D. Howe, Minister of Trade and Commerce

## INDEX

This report contains revised monthly and annual data on the value of manufacturers' inventories and shipments for the period 1949-51. The breakdown of material presented is as follows:

Users are referred to the December, 1953 report for the following:
Definitions of individual industries in Table 3
Lists of industries included in each group in Table 2
Concepts, Sources, and Methods.

## REVISIONS TO SERIES

This report completes the revision of the manufacturers' monthly inventory and shipments value and index series begun in the December 1953 report. The latter publication included revised data for the period December 1951 to December 1953. This report incorporates the following four revisions to previously published data for the years 1949, 1950 and 1951:
(1) - The reference base for the individual industry index series (Table 3) has been changed from the average 1947 values to December 1952 values, in order to provide continuity in the historical data available with that already published for 1952 and later periods. The conversion to the new base was a mechanical one only, $i$.e. the old index series were re-worked so that the December 1952 indexes equal 100. The weight base for these individual industry indexes for 1949,1950 and 1951 remains the average 1947 values whereas in the series beginning December 1951 (see December 1953 and all subsequent reports) the December 1952 values are the weight base as well as the reference base. In industries where there were changes in coverage between December 1951 and December 1952, the change in the weight base has resulted in different index numbers for December 1951 in this report as compared with those in the December 1953 report. For 13 industries, the 1949-51 data are not comparable to the series from 1952 on, and these industries have, therefore, been omitted from this report; see page 19 for further details.
(2) - For the group and major industry inventory indexes in Table 2, the reference base has been changed from the average 1947 values to December 1952 values. The weight base for these series remains as before, i. e, it changes each year to the December values for the previous year, as determined from the Year-End Surveys.
(3) - For the group and major industry inventory indexes in Table 2, and the inventory values in Table l, a correction has been made to each year's figures to allow for errors in the sample as determined by the Year-End Survey for that year. This correction is mechanical - one-twelfth of the December error in each industry is assigned to the previous estimates for January of that year, two-twelfths to February, three-twelfths to March, etc., and new group totals derived. This method avoids a break in the series every December as new benchmarks are adopted for the subsequent year. This correction was made to the 1952 data shown in the December 1953 report and will be made each year in future (corrected 1953 data will be contained in the December 1954 report); no such correction was, however, made to previously published data prior to that for 1952.
(4) - For the group and major industry shipments indexes in Table 2, the reference base has been changed from the average 1947 values to December 1952 values. (The latter values were estimated by applying the December 1952 proportion of total 1952 shipments for reporting firms in each industry to the estimated total shipments for the industry - 1952 gross values of production adjusted for inventory change - with estimates for industries not covered in the monthly sample based on the average December proportion). The weight base, which for previously published data for these years was the 1949 gross values of production, has been changed for the 1950 series to the 1950 gross values of production and for the 1951 series to the 1951 gross values of production. This change has corrected the cumulative error in each year's data, while retaining the monthly pattern of reporting firms; it results, however, in a break in the series every January.

## Table 1 - INVENTORY VALUES IN ALL MANUFACTURING INDUSTRIES

Estimated value of total manufacturers' Investment in Inventories, in all manufacturing industries and in the major econamic-use grouping of industries, sub-divided into raw materials, goods in process, and finished products. Estimates are based on reports fram a sample of firms or, in some industries, on the estimated value of physical stocks. For further description, see page 117, December 1953 report.
(A) ALL INDUSTRIES

|  |  | Total Inventory Investment | Raw Materials | Goods in Process | Finished Products |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | (In Milli | of Dollars) |  |
| 1949 | January | 2,549.2 |  |  |  |
|  | February | 2,586.5 |  |  |  |
|  | March | 2,585.6 |  |  |  |
|  | April | 2,536.3 |  |  |  |

# Table 3. - LNDEX NUMBERS OF VALUES OF INVENTORY INVESTMENT, By COMPONENTS, AND SHIPMENTS IN INDIVDUAL INDUSTRIES. 

Indexes represent values for reporting plants only.
Reports are classified to the industry into which the plant's major items of production fall, but since other items may be included, the indexes are not to be taken as representing commodity movements.

The December, 1951 indexes for a number of industries in this table vary to some extent from the indexes for the same month as published in the December, 1953 report. These differences stem from the fact that the change to the December, 1952 base for the years 1952 and 1953 (which included December, 1951 for reference purposes) included a complete re-compilation of all individual industry series, while the revision in this report of the 194951 series represents a mechanical conversion only of the old series based on average 1947 values. The chief source of differences between the two series is a change in the number of firms reporting. For example, a firm actually reporting in December, 1951 may have stopped doing so during 1952 and in such a case it was removed as of December, 1951 in the re-compiled series; or a firm may have begun to report during 1952, in which case it was included in the re-compiled series back to December, 1951. The other source of differences is a change for the re-compiled series in the method of using reported data for specific firms. These cases include a number of industries where progress payments are involved, but not to a large enough extent to make the 1949-51 series completely incomparable with the later data. Whereever differences in the two sets of December, 1951 data occurs, the data from 1952 on should not be considered strictly comparable with that for earlier years.

Sixteen industries for which data were published in the December 1953 report are not included here. In three of these cases, Canned and Preserved Fruits and Vegetables, Plywoods and Veneers, and Paper Boxes and Bags, no monthly values are available for the 1949-5l period. In four cases, Dairy Products, Miscellaneous Iron and Steel Products, Refrigerators and Appliances and Miscellaneous Electrical Products, changes in numbers of reporting plants or in methods of using reported values were so extensive as to make the 1949-5l data quite incomparable with the later series. The other nine industries are those in which progress payments inventory is an important item in total inventory, and in these cases firms were asked to change their methods of reporting both inventories and shipments quite considerable in 1952. Again the early series are so different from the later data that the 1949-51 indexes cannot be compared with that for later years. Revised indexes for the above industries (except the first three mentioned) have, however, been prepared, and will be made available to users on request.

Table 3 (Cont'd) - INDEX NUNBERS OF VALUES OF INVENTORY INVESTMENT, BY CQNPONENTS AND SHIPMENTS IN INDIVIDUAL INDUSTRIES

Indexes represent values for reporting firms only. For further description, see page 117, December 1953 report.
