Price 10 cents

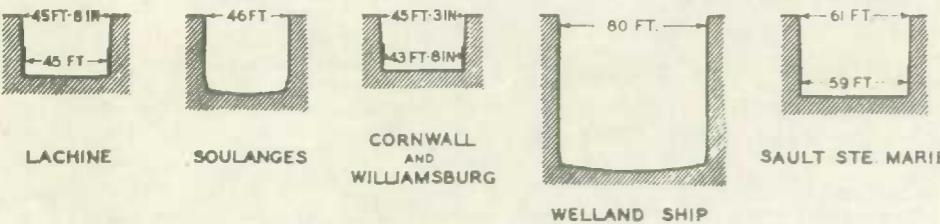

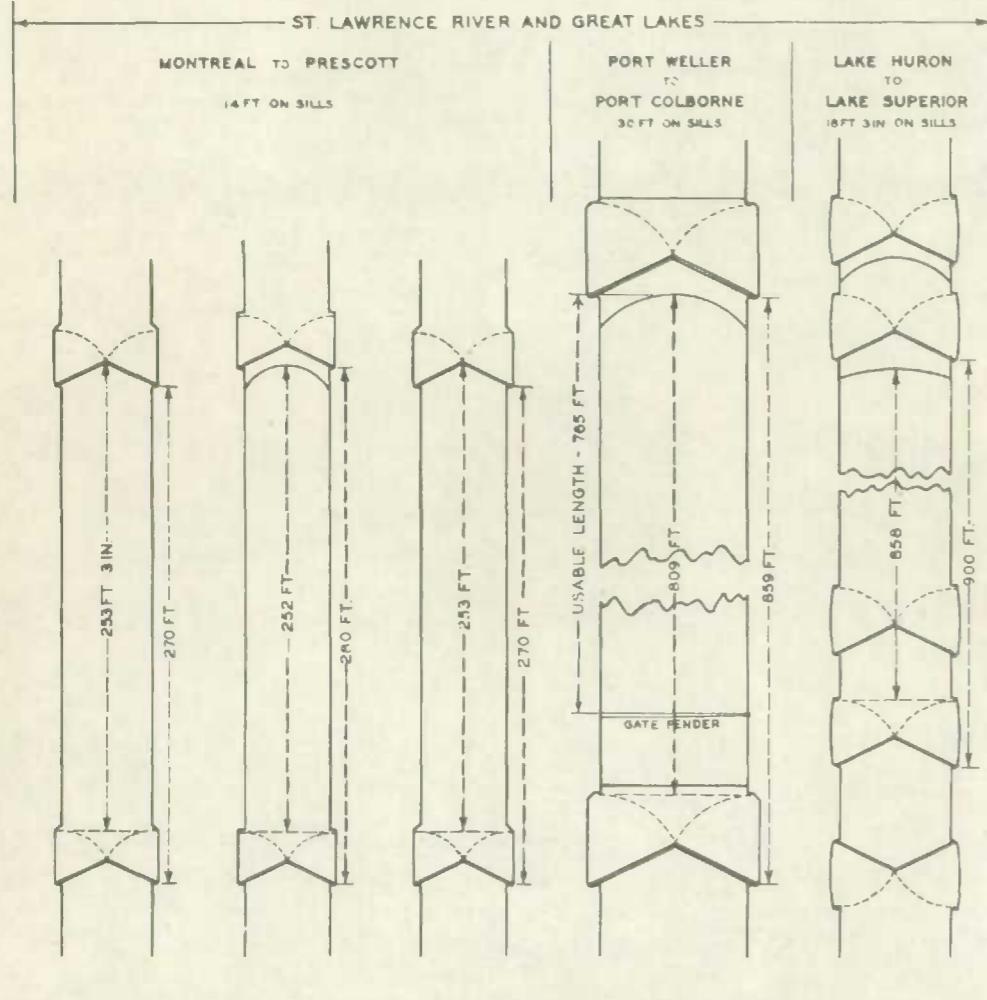

DEPARTMENT OF TRANSPORT

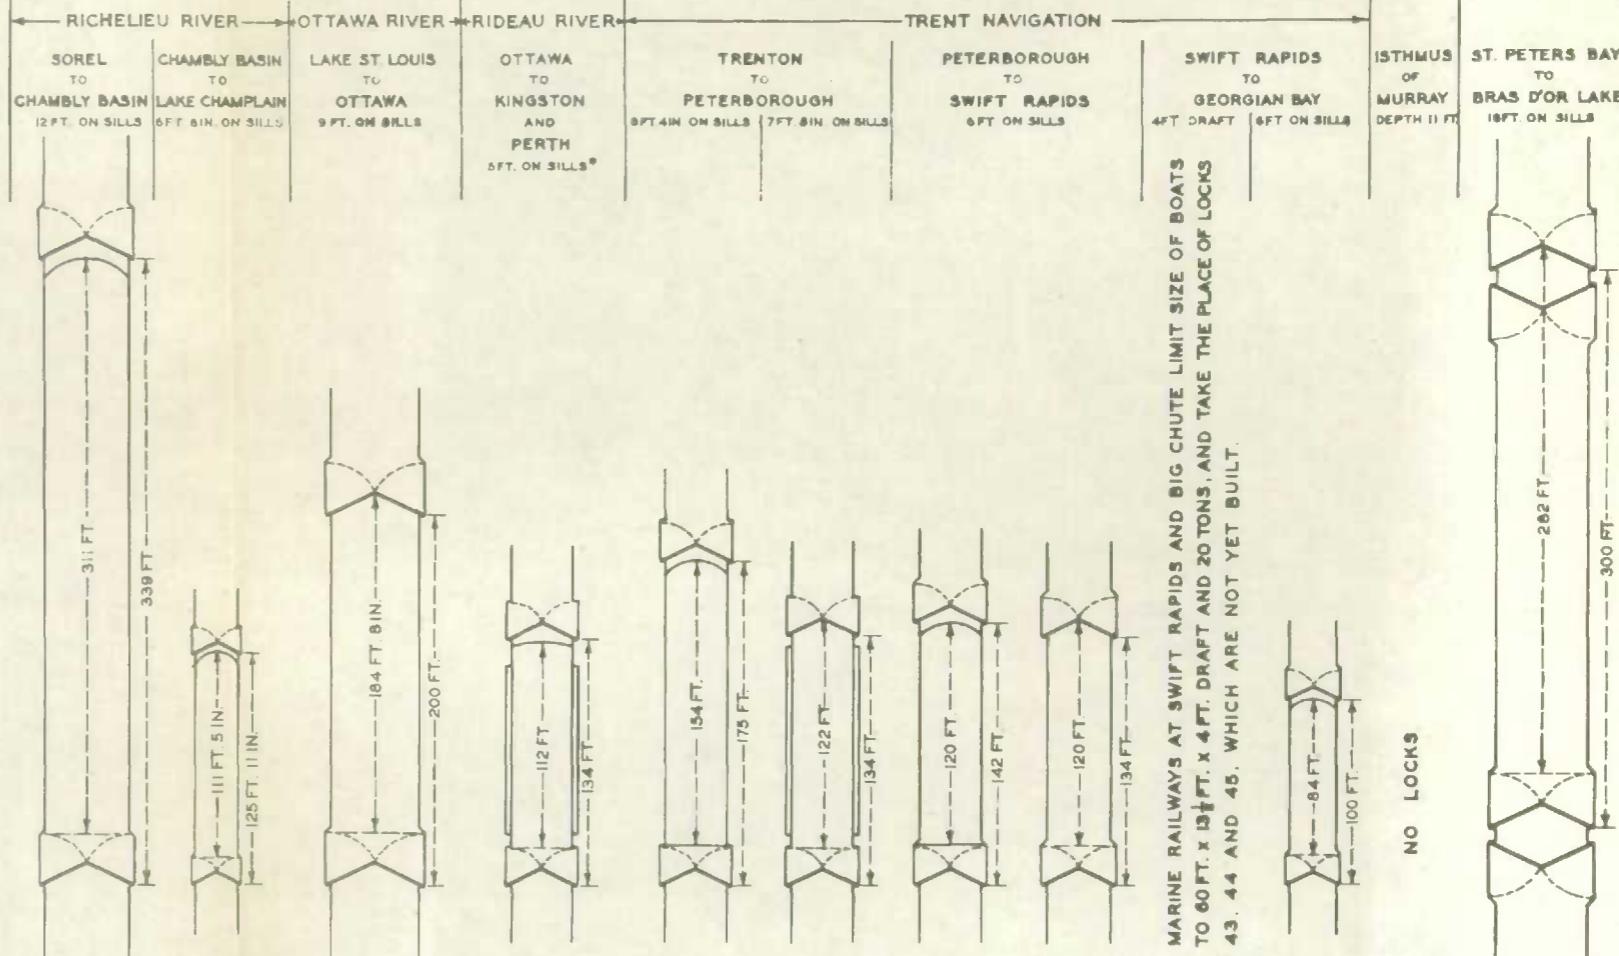

PLANS AND SECTIONS SHOWING

DIMENSIONS OF THE SMALLEST LOCK ON EACH OF THE CANADIAN CANAL SYSTEMS
(EXCLUDING SUPERSEDED LOCKS)

PRIMARY CANALS

SECONDARY CANALS

MARINE RAILWAYS AT SWIFT RAPIDS AND BIG CHUTE LIMIT SIZE OF BOATS
TO 60 FT. x 13 1/2 FT. x 4 FT. DRAFT AND 20 TONS, AND TAKE THE PLACE OF LOCKS
43, 44 AND 45, WHICH ARE NOT YET BUILT.

NO LOCKS

RIDEAU
* MINIMUM DEPTH VARIES FROM 5 FT ON CENTRE LINE OF CHAMBER TO 2 1/2 FT AT SIDES.

TRENT LOCKS 21 & 36 ARE HYDRAULIC LIFT LOCKS, 130 FT. x 33 FT. CLEAR.
LOCKS 28 & 33 ARE 122 FT x 33 FT. CLEAR.
LOCKS 43, 44, 45 & 48, CONSTRUCTION POSTPONED

SLIGHT SHIFTING OF MASONRY IN SOME LOCK WALLS HAS SOMEWHAT NARROWED THE CLEAR WIDTH OF LOCKS IN CERTAIN SPOTS.
LOCK 17 ON THE CORNWALL CANAL IS THE MOST NOTABLE IN THIS RESPECT AND IS THE LIMITING LOCK OF THE ST. LAWRENCE SYSTEM.

DETAILED INFORMATION RESPECTING OVERHEAD CLEARANCES AND AVAILABLE WIDTHS AND DEPTHS OF
CANAL CHANNELS WILL BE FOUND IN THE TEXT.

Chief, Transportation and Public Utilities Branch, G.S. Wrong, B.Sc.

SUMMARY OF CANAL STATISTICS

1848 - 1936

The following tables show the number of vessels with their registered net tonnage and tons (2,000 lbs.) of freight carried, as far back as the records are available, for each of the canals in Canada under the jurisdiction of the Dominion Government. The St. Andrew's lock (not shown on the accompanying map) on the Red river, 15 miles north of the city of Winnipeg, is controlled by the Department of Public Works and the other canals are under the jurisdiction of the Department of Transport (formerly under the Department of Railways and Canals). There are a few other locks on rivers not maintained and controlled by the Federal Government but they are relatively unimportant.

The data are for each canal and, consequently, when added include considerable duplication because of vessels and cargoes using two or more canals on a voyage and being counted at each canal used. The duplications for freight using two or all three of the St. Lawrence, Welland and Sault Ste. Marie canals (both Canadian and United States canals for the last) during 1936 amounted to approximately 7,733,000 tons. No analysis has been made for other years nor for the other canals to compute the amount of duplication in the data.

The main canals are on the St. Lawrence-Great Lakes system overcoming the falls on the St. Lawrence river between Montreal and Prescott, the Niagara Falls on the Niagara river and the falls on the St. Mary's river at Sault Ste. Marie. The difference in elevation of Lake Superior and the St. Lawrence river at Montreal is approximately 580 feet, and 555 feet of this is overcome by locks.

The permissible draught through the St. Lawrence canals is 14 feet, having been increased from an original minimum controlling draught of $4\frac{1}{2}$ feet on the Lachine Canal, to a through minimum of 9 feet in 1848, and to its present draught in 1904. The first canal on this route, the Lachine, was completed in 1824 but records of traffic are available only since 1848.

The first Welland canal on the Niagara river was opened in 1829 and was improved in 1845 with a permissible draught of 9 feet. This was increased to 14 feet in 1887 and the new Welland Ship Canal was opened in 1931, allowing a draught of 18 feet, and completed in 1932 to allow a draught of 25 feet; the locks have 30 feet of water over the sills. Traffic statistics for this canal are also available only from 1848.

The first lock at Sault Ste. Marie was constructed in 1798 with 9 feet of water on the sills. This was destroyed in 1814 and in 1855 a lock was constructed on the United States side of the river with $11\frac{1}{2}$ feet of water. A second lock with 17 feet of water on the sills was constructed in 1881, the Canadian lock with $18\frac{1}{2}$ feet of water on the sills was constructed in 1895, a new United States lock replaced the first lock in 1896 and the third and fourth locks with $24\frac{1}{2}$ feet on the sills were constructed in 1914 and in 1919. The water levels in the channels govern the draught of vessels using these locks and for the largest locks, the third and fourth on the United States side of the river, the draught is 18 feet for upbound vessels and 24 feet for down-bound vessels.

The permissible draught for each canal is shown on the map, but draughts vary with the water levels in the lakes and rivers. During the low water period in 1935 the allowable draught through the St. Lawrence canals was reduced in October to 12 feet 3 inches, as against a normal of 14 feet, and the depth of water on the sills of the locks of the Ottawa river canals has ranged from 8.58 feet to 24.92 feet. For details of dimensions of individual locks see "The Canals of Canada" issued by the Department of Transport (1937 Edition).

For the years 1848 to 1856 the division of vessels was "British" and "foreign" and from 1857 on "Canadian" and "United States." British vessels have been included with Canadian and other foreign vessels with United States; only a relatively small number of other foreign vessels use the canals.
