THE CANADIAN INTERNATIONAL TRADE CLASSIFICATION

The Canadian International Trade Classification (C.I.T.C.) presented in this manual is the product of a joint effort by Revenue Canada, Customs and Excise and Statistics Canada, External Trade Division. It has been designed to facilitate both the administration of various acts and regulations applying to the importation of goods and the compilation of merchandise import statistics. The version found in this manual replaces the C.I.T.C. commodity index which was introduced April 1, 1972, and subsequent updates. This schedule of commodity codes will become effective January 1, 1978, although imports documents with new codes will be accepted any time after December 1, 1977.

A) Scope of Revision

Over the past five years many constructive comments have been submitted by brokers, importers and industry groups suggesting improvements in the classification structure and in the manual formats. Specialists from Customs and Excise and Statistics Canada have relied heavily on this base of information in developing a revised C.I.T.C. schedule. The revision process has left the overall structure of the classification and the general principles for using it intact. The most notable changes are the general clarification of all rules dealing with the treatment of special cases, the amalgamation of the numeric schedule and alphabetical index into a single manual and the provision of both metric and imperial units of quantity as options to facilitate the country's metric conversion programme. Revisions in the detail of the classification often reflect efforts to minimize commodity identification difficulties encountered in the preparation of customs entry documents. In many areas of the classification one will find instances where several commodity codes have been contracted to a few and where commodity definitions for C.I.T.C. codes have been altered to reflect actual import documentation.

B) Manual Format

This manual has been organized into three parts:

- Part I -Introduces the classification structure and some basic concepts; provides a description of terms and describes procedures for dealing with special cases; demonstrates the process of locating a commodity code.
- Part II -Presents a numeric schedule of the C.I.T.C. commodity classification. Content descriptors have been organized at three levels. At the three-digit level, the schedule provides explanatory notes delineating the product boundaries found within the group. Five digit commodity headings generally describe a family of like commodities. Finally at the most detailed seven-digit commodity level, specific products are identified by the descriptor. At this final level one finds the required units of measure defined in both metric and imperial alternatives together with the most typical tariff codes for the identified commodity. The purpose of this section is to allow users of the manual to become familiar with broad product categories presented in the classification, to facilitate the review of complete commodity families and to allow highly specialized importers to concentrate their attention on a select portion of the C.I.T.C. schedule.
- Part III -Contains an alphabetical index to the C.I.T.C. schedule found in Part II. The keyword principle is employed in determining the alphabetical placement of an individual product descriptor. The purpose of this section is to facilitate the selection of the correct C.I.T.C. code based on the user's understanding of a commodity description.

C) The Structure of the C.I.T.C.

The structure of the C.I.T.C. corresponds to that of the Statistics Canada Standard Commodity Classification, which divides commodities into three main groupings: crude materials, fabricated materials and end products. Crude materials are raw products or those subject to preliminary processing (e.g. wool scouring) only. End products are articles rather than materials (i.e. finished commodities). Once these two categories have been defined, fabricated materials are those which remain.

Live animals; food, feed, beverages and tobacco; and certain special transactions are treated separately for reasons which need not be explained at length. The result is a seven-way breakdown of the classification into "Section", as follows:

00	-	Live animals
01 to 18	-	Food, feed, beverages, and tobacco
20 to 29	-	Crude materials, inedible
30 to 49	-	Fabricated materials, inedible
50 to 96	-	End products, inedible
97	-	Special transactions, trade
99	-	Special transactions, non trade

The Sections are in turn composed of groupings of similar products identified at the three digit level. Groups up to the End Products, Inedible section (50) follow the principle of separating products according to their material content. An example of this would be group 451, Aluminum, including Alloys, which contains only the non-ferrous metal aluminum and its alloys. The End Products, Inedible section identifies groups on the basis of end use. An example of this would be the group definition for 671, Plumbing Fixtures and Sanitary Ware. For additional detail on section and group level commodity definitions please refer to page 18. At the detail level we find the five-digit numbers relating to a family of like commodities which in turn are identified in specific terms at the seven-digit level. With regard to the specific identification of commodities at the seven-digit level, two exceptions must be mentioned. The N.E.S. or 'Not Elsewhere Specified' classes are encountered in all instances where an exhaustive itemization of individual products is not possible and accordingly a residual category is necessitated. The primary difference between the N.O.P. or 'Not Otherwise Provided For' categories found in the Custom Tariff and the N.E.S. definitions is that the C.I.T.C. relates the N.E.S. classes to a logical product structure while the Tariff merely provides residual categories.

The C.I.T.C. classification employs the following standard definitions for the final two digits throughout the schedule:

'10'	-utilized when only a single commodity code is required to define all products within a five-digit level.
'90'	-represents the N.E.S. class if no other N.E.S. class has been defined within the five-digit family.
'X9'	-If the final digit of a C.I.T.C. class is 9 then it must represent an N.E.S. and more than one N.E.S. exists within the five-digit family
'X8'	-a class ending with a final digit of 8 can only be a 'part of' class and will not require any quantity information.

D) Terms and Special Instructions

Keywords and Sequence

As in most product directories, the alphabetical index (part III) employs the keyword concept where the first word of the product descriptor is usually the principal noun. An item such as men's nylon raincoats would be found under the R section of the index with a descriptor of "Raincoats, men's, nylon". For certain product families the keyword concept is supplemented by 'look-see' descriptors such as the following examples:

SEDANS ... SEE CARS
LIGHTING FIXTURES ... SEE FIXTURES, LIGHTING

All descriptors in the index have been arranged in ascending alphabetical sequence. All numerics found at the beginning or within a descriptor have been disregarded and the item is found under the appropriate alpha section. The product '2, 4-D Ester Dusts' will be found under the D section of the index.

Abbreviations

A substantial number of descriptors required the use of abbreviations to remain within the standard space allotment. Please note that the abbreviations do not necessarily conform to forms commonly encountered. A comprehensive list of all abbreviations used is found on page 13.

Tariff Items

The numeric schedule (part II) presents a maximum of three tariff items for each individual C.I.T.C. code or alternatively provides a 'various' indicator. The tariff items shown represent the items most commonly used with the commodity code in question. The list is not necessarily exhaustive nor does it have any legal standing. Should the term 'various' appear adjacent to a commodity code, it serves notice that an extensive array of appropriate tariff items exist

for this product, too numerous to list. The authority for finally determining the tariff item under which any commodity should be imported remains solely with Revenue Canada, Customs and Excise.

Units of Measure

Both the numeric schedule and the alphabetical index present imperial and metric unit of measure alternatives for a C.I.T.C. code. Each option is represented by an alphabetic abbreviation of the measure description and a two-digit numeric code. The numeric code is used in the actual completion of a commodity line on a B-3, B-6 entry. Of course, one must take care to ensure that the quantity information placed in the quantity field of the entry line corresponds to the unit of measure code selected. For all cases where the tariff used specifies a quantity which does not conform to the quantity requirement of the selected C.I.T.C. code, the tariff requirements are overriding. If the tariff item does not dictate the use of a particular unit of measure for the purpose of levying a specific rate of duty, the unit of quantity shown with the C.I.T.C. code must be used.

Packaging

The selection of the correct commodity code for packaging depends on two factors; whether it is commercially reusable or not; whether identification of the packaging is possible. If the packaging is identifiable in terms of the commodity descriptions provided below and if it is commercially reusable, it will fall in the '950' commodity group. Examples of commercially reusable packaging are paper cores, metal gas cylinders and wire reels. If the packaging is commercially reusable and identification in terms of the '950' classes is not possible, assign one of the '970' commodity group codes found on page 8. Finally, any packaging which is not considered commercially reusable should also be assigned a commodity code from the '970' group detailed on page 8.

Reusable Packaging

Barrels and drums, metal repeat shippers	950 19 30	No.	10
Cylinders, metal, gas, repeat shippers	950 24 30	No.	10
Bottles, metal, gas, repeat shippers	950 24 30	No.	10
Reels, metal, for shipping goods	950 29 60	-	-
Bottles, mercury, iron or steel	950 29 90	-	-
Bottles, glass, for alcoholic beverages	950 32 10	-	-
Ampoules, glass, except laboratory	950 36 20	-	-
Carboys and demijohns, glass	950 36 30	-	-
Bottles, glass, soft drink	950 36 60	-	-
Bottles, glass, milk	950 36 75	-	-
Jars, glass, containers, nes	950 36 90	-	-
Shipping and distribution containers, glass, nes	950 36 90	-	-
Boxes, egg, paperboard	950 41 20	-	-
Egg cartons, paperboard	950 41 20	-	-
Egg cartons, molded, pulpboard	950 41 30	-	-
Boxes/cartons, auto parts, paperboard	950 45 20	-	-
Boxes/cartons, auto parts, solid fibreboard	950 45 20	-	-
Boxes/cartons, corrugated shipping, nes	950 45 69	-	-
Boxes/cartons, solid fibreboard, shipping nes	950 45 69	-	-
Cores, paperboard for winding paper	950 47 30	M	17
Cores, paperboard for winding, nes	950 47 90	M	17
Cans, fibre with or without ends	950 48 10	-	-
Drums, fibre with or without ends	950 48 10	-	-
Barrels and kegs, wooden/tight/	950 55 20	No.	10
Barrels and kegs, wooden/slack/	950 55 30	No.	10
Boxes, wooden, empty	950 66 20	-	-
Crates, wooden, empty	950 66 30	-	-
Spools, wooden	950 66 40	-	-
Bobbins, wooden except textile machine	950 66 40	-	-
Reels, cable and wire, wooden	950 66 50	-	-
Reels, wire wooden	950 66 50	-	-
Cores, wooden, for winding paper	950 66 70	-	-
Bins and hoppers, wooden, shipping type	950 66 80	-	-
Skids, wooden, shipping type	950 66 81	-	-
Racks, wooden, shipping type	950 66 82	-	-
Pallets, wooden, shipping type	950 66 83	-	-
Tote boxes, wooden, shipping type	950 66 84	-	-
Shipping containers, wooden/nes	950 66 90	-	-

Non-Reusable Packaging

Packaging, non-reusable, metal	970 10 20	-	-
Packaging, non-reusable, glass	970 10 30	-	-
Packaging, non-reusable, paper/paperbd/pulpbd	970 10 40	-	-
Packaging, non-reusable, wooden	970 10 50	-	-
Packaging, non-reusable, textile	970 10 60	-	-
Packaging, non-reusable, plastic	970 10 70	-	-
Packaging, non-reusable, nes	970 10 90	-	-

Goods Returned after Export

All goods returned to Canada within five years of export and entered under tariff item 7090501 or 7091001 should be assigned commodity codes as defined by the '97030' five-digit structure presented below.

Goods Returned

Canadian goods ret'd, in shuttle service	970 30 15	-	-
Canadian goods ret'd, food/feed/bev/tobacco	970 30 20	-	-
Canadian goods ret'd, other prim/basic prods	970 30 30	-	-
Canadian goods ret'd, general purp ind machy	970 30 50	-	-
Canadian goods ret'd, material handling machy	970 30 51	-	-
Canadian goods ret'd, metalworking machy	970 30 52	-	-
Canadian goods ret'd, special purpose machy	970 30 53	-	-
Canadian goods ret'd, machy nes exc agr	970 30 59	-	-
Canadian goods ret'd, agr mach incl tractors	970 30 60	-	-
Canadian goods ret'd, trucks and trk tractors	970 30 61	-	-
Canadian goods ret'd, motor vehicles nes	970 30 69	-	-
Canadian goods ret'd, apparel and accessories	970 30 70	-	-
Canadian goods ret'd, nes	970 30 89	-	-

Commodity Code Format

The B-3/B-6 entry form is designed to accommodate a full seven digits in the box allocated for the commodity code. The complete seven-digit number must always be inserted. Each leading zero should always be entered (e.g. 006 40 20 is entered 0064020).

E) How to find a Commodity Code

With experience, manual users will develop a selection procedure which services their particular circumstances most effectively. The two general methods outlined below attempt to illustrate the processes involved and the possible alternatives and pitfalls which may be encountered.

Use of the Alphabetical Index (Part III)

As mentioned earlier, the index uses the keyword principle to structure the product descriptor and to determine the placement of that descriptor in the alphabetical sequence. To illustrate by example, let us assume a shipment in which the goods are described as outboard motors. The identifiable selection steps might be:

- (i) Identify the keyword in the description. In this case the answer to the question "what is it?" would be motors.
- (ii) Referencing the M section of the index we find the descriptor "Motors, outboard" next to the C.I.T.C. code 592 50 10. The quantity requirement is numbers with unit of measure code '10'.

- (iii) Alternatively, if the invoice description had been a marine engine with a jet propulsion unit, we would have used the keyword engine. Referring to the index we encounter what appears to be initially three equal possibilities.

a) Engines, Gas, Marine, Exc. Outboard	592 40 20
b) Engines, Inboard-Outboard, Propulsion units	592 19 10
c) Engines, Jet, Gen. Purp. Exc. Aircraft Type	502 99 89

Since we have a specific end use (marine) indicated in the invoice description we can immediately exclude possibility c). With respect to our description it would appear either a) or b) might apply. To resolve this question it becomes necessary to refer to the numeric schedule. A quick scan of the '592' group reveals that a class exists for "Drives, Jet, marine c/w engine 592 99 20". Jet propulsion units may also be referred to as a jet drive. Since the drive is combined with (c/w) an engine the C.I.T.C. class 592 99 20 would be assigned to this transaction. The correct C.I.T.C. class turns out to be neither of those selected under the alphabetical approach. This particular example serves to illustrate that for all cases where the product description encountered in the alphabetic does not describe the commodity precisely or where an N.E.S. term is encountered in the descriptor, it would be advisable to cross-reference with the group contents presented in the numeric schedule.

Use of the Numeric Schedule (Part II)

Sole use of the numeric schedule requires a knowledge of the classification structure. To illustrate the search steps involved in this method we might use as an example a shipment of goods described as replacement parts for a refrigeration compressor unit.

- (i) A summary of the classification can be found on page 18. Since compressor parts are considered end products we can begin our scan with the '500' group headings. We quickly encounter a group descriptor of "Air conditioning and refrigeration equipment 655".
- (ii) Using the group code of 655, we refer to the numeric schedule to scan the detailed class descriptions. At the five-digit level we find a descriptor of "Refrigeration Compressor Units". All the classes within the five-digit level refer to complete units. A subsequent five-digit header relates to "Air Conditioning and Refrig. Equipment and Parts N.E.S."
- (iii) Since this is the only category mentioning parts, the seven-digit class - 655 99 28 - "Compressor Units, Refrigeration, Parts of" is the correct commodity code for this shipment.
- (iv) For an importer or broker who specializes in a very narrow range of products, it is quite conceivable to dispense with the alphabetic portion of the manual, referencing but a few pages of the numeric index.

F) General Comments

Units versus Parts

Complete units are always segregated from parts by the classification. The parts portion of a shipment will always use a commodity code carrying the qualifier "parts of". Parts classes do not have a C.I.T.C. quantity requirement; complete unit classes usually require quantity data. With regard to N.E.S. classes, it is important that all specific C.I.T.C. codes be examined for applicability prior to assigning the residual code for a commodity family.

Commodity Coding Assistance

Should the identification of the appropriate commodity code prove difficult, assistance may be obtained from Statistics Canada representatives located at the following port offices:

Vancouver	544-1653
Calgary	231-4612
Winnipeg	985-3762
Toronto	966-8133
London	679-4489
Hamilton	523-2930
Montreal	283-4001
Mirabel	476-3252
Quebec	694-4909
Ottawa	593-7222

The personnel located at these ports have a general background in applying C.I.T.C. codes to product descriptions. If they are unable to select a satisfactory commodity code the query will be referred to a team of commodity specialists for a decision. If it is not possible to contact Statistics Canada personnel at the above ports, a request for commodity code containing all relevant documentation may be forwarded directly to the commodity specialist group at the following address:

Enquiry Control Unit,
External Trade Division,
Statistics Canada,
Ottawa, Ontario K1A 0T6 or
Telex 053 3585
Telephone (613) 996-4509

Additional Copies

Copies of the Canadian International Trade Classification manual (Cat. No. 65-502E English and 65-502F French) may be obtained by writing:

Publications Distribution,
Statistics Canada,
Ottawa, Ontario K1A 0T6

The charge for each copy will be \$9.75. Please enclose a cheque made out to the Receiver General for the correct amount.

Computer Tape File

A computer tape file of the C.I.T.C. manual is also available on request. The computer file forwarded will be an industry compatible 9 track 1600 bytes per inch (BPI) tape using the Extended Binary Coded Decimal Interchange Code (EBCDIC), odd parity format. Additional record format information will be provided at the time of request. The charge of \$100.00 includes the price of computer tape. Please direct all requests to the address provided above.

Units of Measure

For purposes of the C.I.T.C. certain units of measure are acceptable in both the Imperial and the metric systems. In these cases the same units of measure are used.

Unit of measure	Unit of measure code	Explanation
NO	10	Number (Number of cars; Number of sheets of plywood etc.)
PAIR	11	Number of pairs
DZ PR	12	Number of pairs in dozens
DOZ	13	Number in dozens
GROSS	14	Number in gross
DZ BT	15	Number of bottles in dozens for fermented alcoholic beverages
C	16	Number in hundreds
M	17	Number in thousands
IN	20	Length in linear inches
FT	21	Length in linear feet
YARD	22	Length in linear yards
SQ IN	30	Area in square inches (surface area)
SQ FT	31	Area in square feet (surface area)
BF	35	Volume in board feet
SQ YD	36	Area in square yards (surface area)
M B F	37	Volume in thousand board feet
CU IN	40	Volume in cubic inches
CU FT	41	Volume in cubic feet
CU YD	42	Volume in cubic yards
BBL	43	Volume in barrels
BU	44	Volume in bushels Barley 48 LBS Corn (maize) 56 LBS Rye 56 LBS Buckwheat 48 LBS Oats 34 LBS Wheat 60 LBS
GAL	45	Volume in Imperial gallons (1 U.S. gallon = 0.83 Imperial gallons)
P GAL	46	Volume of alcoholic content in terms of Canadian gallons of the strength of proof (1 U.S. P GAL = 0.74 Can P GAL)
M C F	47	Volume in thousand cubic feet
OZ	50	Weight in ounces
TR OZ	51	Weight in troy ounces
LB	52	Weight in pounds

Units of Measure (cont.)

Unit of measure	Unit of measure code	Explanation
TON	54	Weight in short tons of 2,000 LBS each (1 long ton = 1.12 short tons or 2,240 LBS)
CARAT	56	Weight in carats
CWT	57	Weight in hundredweights of 100 LBS each
CWTAD	59	Air dry weight in CWT of 100 LBS each for wood pulp and similar pulps
M KWH	60	Thousand kilowatt hours
PACK	61	Number of packs (Playing cards)
BOX	62	Number of boxes (Sardines etc.)
PKG	63	Number of packages (Honey bees)
CORD	64	Volume in cords
m	70	Length in metres
cm ²	71	Square centimetres
D m ²	73	One tenth of one square metre (.1 m ²)
m ²	74	Square metres
m ³	76	Cubic metres
K m ³	78	One thousand cubic metres (1000 m ³)
g	80	Grams
kg AD	83	Air dry weight in kilograms for wood pulp and similar pulps
kg	85	Kilograms
tonne	86	Metric tonnes
litre	88	Litres

331 LUMBER

LUMBER IS USUALLY RECTANGULAR-SAWN TO STANDARD SIZES AND USUALLY NOT LESS THAN 6' LONG. THE MOST COMMON DIMENSIONS OF CONSTRUCTION LUMBER ARE 1"x6", 2"x4", 2"x8", 2"x12", 4"x4" IN CROSS-SECTION AND 7', 8', 10', 12' ETC IN LENGTH AND KNOWN BY THE TERM "DIMENSION LUMBER" (DO NOT CONFUSE WITH DIMENSION-SAWN (33340) WHICH ARE SHORT (LESS THAN 6') PIECES OF WOOD, FLAT OR SQUARE, FOR TURNING OR GLUEING) IN NORTH AMERICA. SOFTWOOD LUMBER IS USUALLY TRADED IN DRESSED OR PLANED FORM. HARDWOOD LUMBER IS USUALLY SHIPPED IN ROUNDS FORM.

LUMBER CONVERSION FACTORS:

CUBIC FEET X 0.012 = M³
 CUBIC METERS X 0.424 = M³
 SQ FT X THICKNESS IN INCHES X 0.001 = M²

EXCLUDE SAWMILL PRODUCTS (333) AND OTHER WOOD FABRICATED MATERIALS (339).

CANADIAN INTERNATIONAL TRADE CLASSIFICATION

COMMODITY CODE	DESCRIPTION	IMPERIAL MEASURE UNIT CODE	TARIFF ITEMS COMMONLY APPLIED	METRIC MEASURE UNIT CODE
446	STRUCTURAL SHAPES, STEEL, AND SHEET PILING			
	SEE ALSO NOTE 447 FOR DEFINITION OF ALLOY, CARBON AND STAINLESS STEEL.			
	W SHAPES ARE STRUCTURAL STEEL WIDE FLANGE BEAMS OR COLUMNS, THE INNER FLANGE SURFACES OF WHICH ARE SUBSTANTIALLY PARALLEL TO EACH OTHER.			
	BEAMS/COLUMNS, WIDE FLANGE (WF) ARE ALSO REFERED TO AS WIDE FLANGE STRUCTURAL SHAPES.			
	C SHAPES ARE AMERICAN STANDARD STEEL CHANNELS, S SHAPES ARE AMERICAN STANDARD STEEL BEAMS, BOTH HAVE INNER SURFACE SLOPES OF APPROXIMATELY 16 2/3%.			
	H-BEAMS ARE STRUCTURAL STEEL SHAPES THAT ARE ESSENTIALLY SQUARE IN CROSS-SECTION. THEY MAY OR MAY NOT BE OF THE WIDE FLANGE VARIETY.			
	I-BEAMS ARE STRUCTURAL STEEL SHAPES, OTHER THAN H-BEAMS WHICH MAY OR MAY NOT BE OF THE WIDE FLANGE VARIETY.			
	L SHAPES ARE EQUAL AND UNEQUAL LEG STRUCTURAL STEEL ANGLES.			
	M SHAPES ARE MISCELLANEOUS STRUCTURAL STEEL BEAMS & COLUMN SHAPES OF THE WIDE FLANGE TYPE WHICH HAVE INNER FLANGE SURFACE CHARACTERISTICS & A FLANGE TO WEB THICKNESS THAT EXCLUDES THEM FROM BEING CLASSIFIED WITH S OR H-PILE SHAPES.			
	MC SHAPES ARE MISCELLANEOUS STRUCTURAL STEEL CHANNELS, OTHER THAN AMERICAN STANDARD STEEL CHANNELS.			
	SHAPES, STRUCTURAL STEEL, BAR SIZE, ARE LESS THAN 3" IN MAXIMUM CROSS-SECTIONAL DIMENSION.			
	SHAPES, STRUCTURAL STEEL, INTERMEDIATE SIZES, ARE 3" TO 6" INCLUSIVE IN MAXIMUM CROSS-SECTIONAL DIMENSION.			
	SHAPES, STRUCTURAL STEEL, LARGE SIZES, ARE OVER 6" IN MAXIMUM CROSS-SECTIONAL DIMENSION.

CANADIAN INTERNATIONAL TRADE CLASSIFICATION

COMMODITY CODE	DESCRIPTION	IMPERIAL MEASURE UNIT CODE	TARIFF ITEMS COMMONLY APPLIED	METRIC MEASURE UNIT CODE
449	WIRE AND WIRE ROPE, IRON AND STEEL			
	SEE ALSO NOTE 442 FOR DEFINITION OF ALLOY, CARBON, STAINLESS AND TOOL STEEL.			
	WIRE, STEEL (44912 TO 44945) IS "SINGLE" WIRE IN THE FORM OF A THREAD OR SLENDER ROD.			
	WIRE OF IRON OR STEEL IS A DRAWN, NON-TUBULAR PRODUCT			
	A) IF IN COILS OF ANY CROSS-SECTIONAL SHAPE OR DIMENSION,			
	B) IF IN STRAIGHT CUT LENGTHS, WITH A MAXIMUM CROSS-SECTIONAL DIMENSION OF 0.50 INCH OR,			
	C) IF COLD ROLLED FLAT AFTER DRAWING, WITH A MAXIMUM WIDTH OF 0.50 INCH, IN COILS OR IN STRAIGHT CUT LENGTHS.			
	WIRE STRAND IN ITSELF IS NOT WIRE ROPE. IT CONSISTS OF A NUMBER OF WIRES ALL OF THE SAME DIAMETER, TWISTED HELICALLY AROUND A SINGLE WIRE OF THE SAME SIZE. A WIRE STRAND MAY SHOW THE SPECIFICATION "1 X 18", WHICH MEANS THERE ARE 18 OUTER WIRES AROUND ONE WIRE.			
	WIRE ROPE CONSISTS OF A NUMBER OF WIRE STRANDS TWISTED HELICALLY TOGETHER, USUALLY AROUND A FIBRE OR STEEL WIRE CORE, E.G. (FC IS FIBRE CORE, INRC IS INDEPENDENT WIRE ROPE CORE). WIRE ROPE DESCRIBED AS "6 X 18", CONSISTS OF 6 WIRE STRANDS, EACH WIRE STRAND HAVING 18 WIRES.			
	WIRE, PLASTIC COATED OR COVERED IS NOT NECESSARILY INSULATED.			
	BARBED WIRE

METALWORKING MACHINERY

A METALWORKING MACHINE TOOL IS A POWER DRIVEN MACHINE, NOT PORTABLE BY HAND, USED TO SHAPE OR FORM METAL BY CUTTING, IMPACT OR PRESSURE, BY ELECTRONIC, CHEMICAL, SONIC, MAGNETIC OR LIGHT TECHNIQUES OR BY A COMBINATION OF THESE PROCESSES.

EXCLUDE TUNGSTEN CARBIDE AND TUNGSTEN CARBIDE TIPPED TOOLS FOR PURPOSES OTHER THAN METALWORKING (E.G. TUNGSTEN CARBIDE ROCK DRILL BITS, 521).

PULP AND PAPER INDUSTRIES MACHINERY

INCLUDE MACHINERY UNIQUELY DESIGNED FOR AND SOLELY APPLIED TO THE DIRECT AND FURTHER PROCESSING OF PULP AND PAPER.
EXCLUDE MACHINERY THAT PERFORMS AN ANCILLARY OR SUPPORTING FUNCTION E.G. (MACHINERY FOR MATERIAL HANDLING, ELEVATING, CONVEYING ETC.) UNLESS SUCH ITEMS ARE INTEGRATED WITH THE PROCESS MACHINERY TO SUCH AN EXTENT THAT THEY CANNOT BE CONSIDERED AS SEPARATE ITEMS.
FOURDRINIER WIRE CLOT; (METAL-3834410), (MAN MADE FIBRE-3810930) AND PAPERMAKERS' FELT (38176 OR 4742030).
