## 1. INTRODUCTION

The Canada Pension Plan Disability Beneficiaries Survey was conducted by Statistics Canada in May, 1995. Sponsored by Human Resources Development Canada (HRDC), this survey was conducted in order to develop a profile of persons who are currently in receipt of Canada Pension Plan (CPP) disability benefits.

This manual has been produced to facilitate the use of the survey results. Any questions about the data set should be directed to:

#### Statistics Canada

Paul Labelle Special Surveys Division, Statistics Canada 5th floor, Jean Talon Building Tunney's Pasture Ottawa, Ontario K1A 0T6 (613) 951-6802

IT IS IMPORTANT FOR USERS TO BECOME FAMILIAR WITH THE CONTENTS OF THIS DOCUMENT BEFORE PUBLISHING OR OTHERWISE RELEASING ANY ESTIMATES DERIVED FROM THE MICRODATA FILE OF THE CANADA PENSION PLAN DISABILITY BENEFICIARIES SURVEY.

#### 2. BACKGROUND

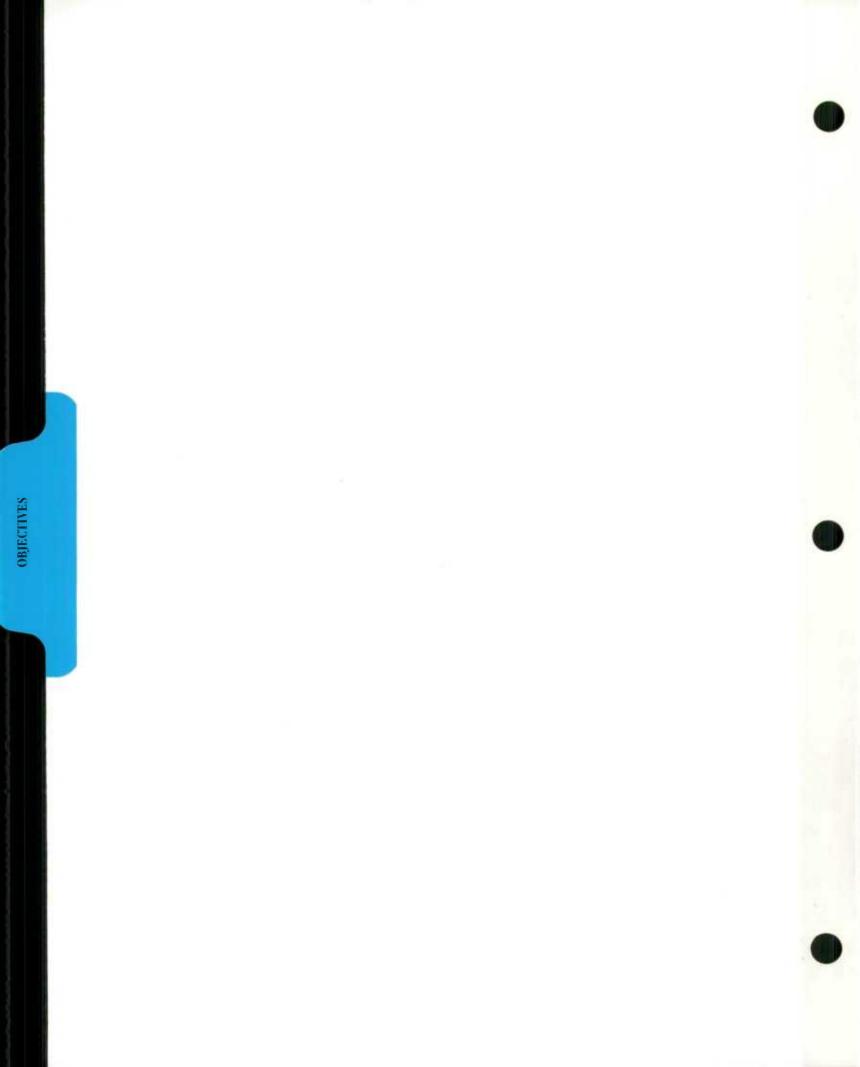

Statistics Canada was approached by the Income Securities Programs Branch at HRDC in January, 1995 to conduct a survey which would address some of the Department's concerns with regards to persons drawing disability benefits from the Canada Pension Plan.

Due to the current and ongoing social policy review by the federal government, this survey was developed and the data collected in a short period of time. This was due to the immediate nature of the initial client's (HRDC) needs for timely data during this review process.

The survey collected information on various topics including demographics, types of disabilities, education, employment history, labour force motivation, disability-related assistance requirements, personal and family income and level of service provided by the plan. This information will be used to evaluate how the disability benefit affects beneficiaries and their families, and how clients may be better served under the program.

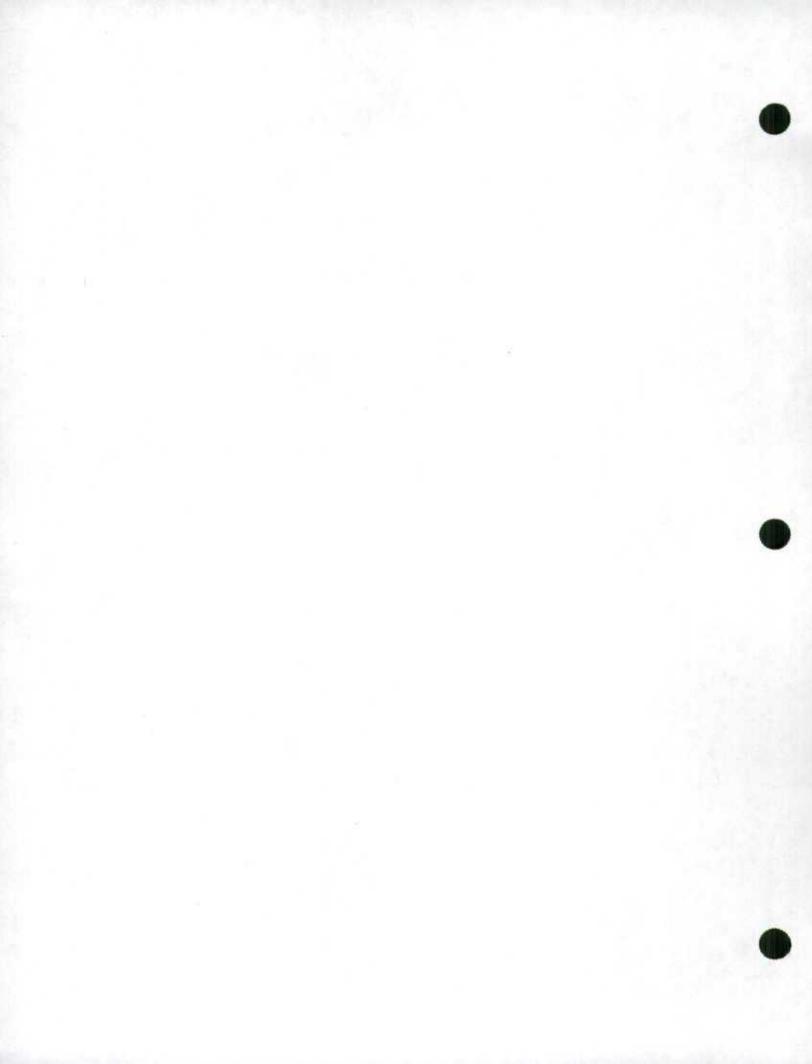

#### 3. OBJECTIVES

There are three main objectives which HRDC has outlined. They are:

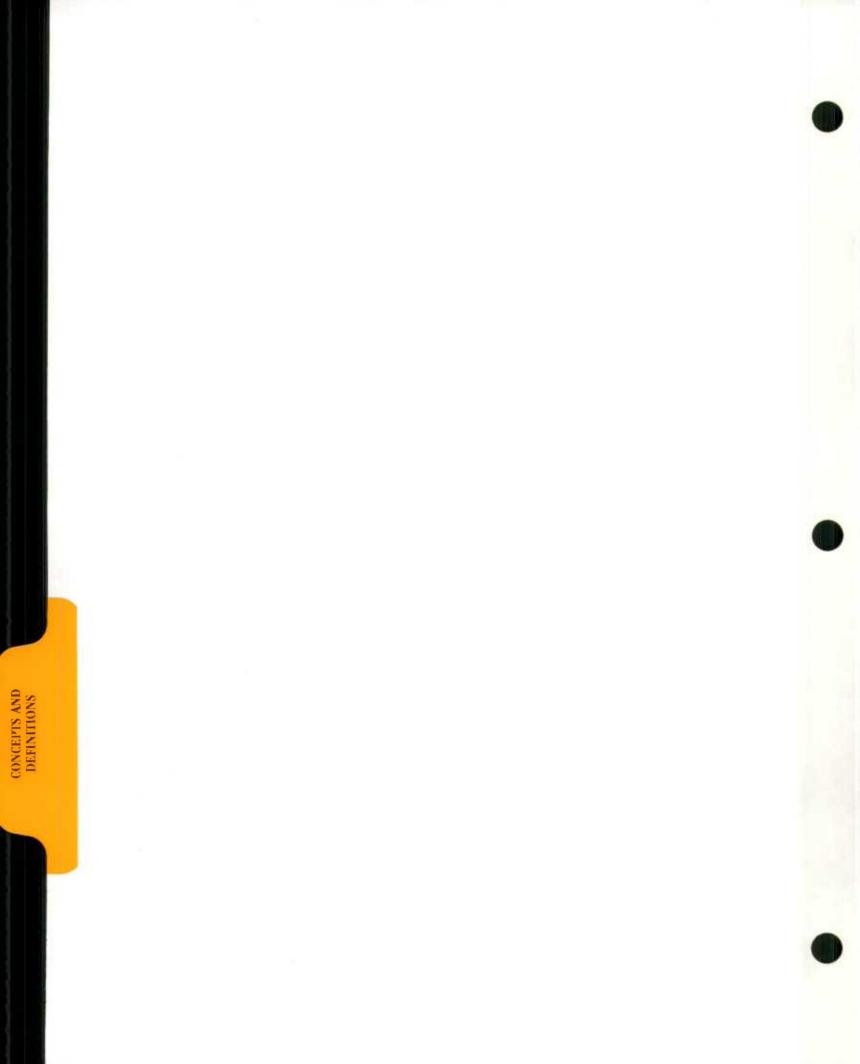

- (i) to develop a socio-demographic profile of CPP Disability beneficiaries;
- (ii) to collect information on the factors influencing the incidence of CPP Disability and;
- (iii) to collect information to evaluate the CPP Disability program

To accommodate these goals, and to ensure that the survey is focused on fulfilling these objectives, HRDC submitted an analysis plan which outlined their variables and data needs. This plan was used to design the questionnaire and to justify the variables requested.

There were three specific variables for which HRDC requested the data be collected. These were age (18-34, 35-44, 45-54, 55-59, 60-64), sex (male, female) and length of benefit (less than two years, 2-5 years, 6-9 years, 10 years and over). The HRDC outline focused on these areas as primary variables for analysis.

#### 4. **CONCEPTS AND DEFINITIONS**

Analysis of the data needs to be informed by concepts and definitions which were used to shape the data collection instrument.

<u>Canada Pension Plan</u>: The Canada Pension Plan is a contributory, earnings-related social insurance program. It ensures a measure of protection to a contributor and his or her family against the loss of income due to retirement, disability and death. It covers nearly all employed and self-employed persons in Canada, except Quebec, which has a similar program called the Quebec Pension Plan (QPP). Benefits from either plan are based on credits accumulated under both, as if only one plan existed.

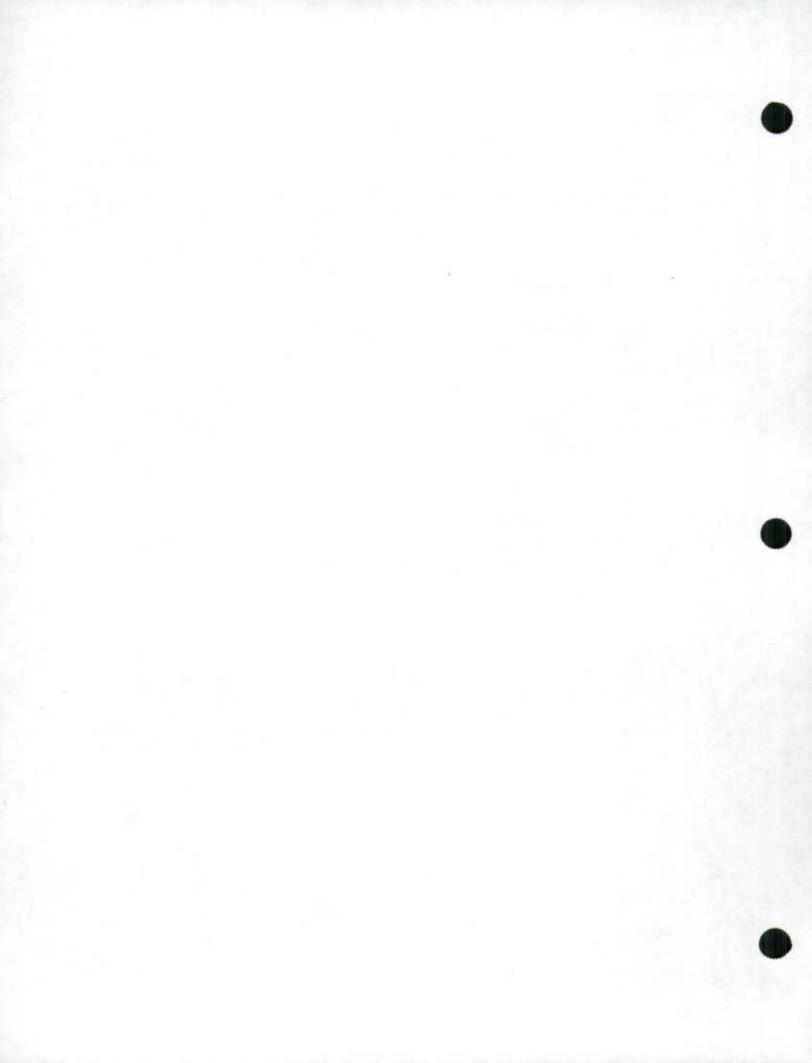

<u>CPP disability pension (or benefit)</u>: The CPP benefit is payable to contributors with a severe and prolonged physical or mental disability, if they are between the ages of 18 and 64, and meet minimum contribution requirements. At age 65 the pension is automatically converted to a regular retirement pension. The disability benefit consists of a flat-rate component (an amount, unrelated to previous earnings, paid to all beneficiaries) and an earnings-related component. The earnings-related component is equal to 75 percent of a retirement pension, calculated as if the contributor became 65 years of age in the month when the disability pension became payable.

<u>Disability</u>: A contributor is considered to be disabled under CPP if he or she has a physical or mental disability which is both severe and prolonged. "Severe" means that the person cannot regularly pursue any substantially gainful occupation. "Prolonged" means that the disability is likely to be long continued and of indefinite duration, or is likely to result in death.

<u>Activity limitations</u>: Persons with activity limitations are individuals who for health-related reasons are limited in the kind or amount of activity they can perform on a day to day basis.

<u>Work related training</u>: Sometimes referred to as vocational training. Under the CPP plan vocational rehabilitation is provided to recipients of disability benefits. A national vocational rehabilitation project is providing services to selected CPP clients across Canada. Once rehabilitation has been successfully completed, clients are entitled to a three-month job search or trial work period. After this time clients who are no longer disabled stop receiving disability benefits.

#### 5. SURVEY METHODOLOGY

The sample design of the Canada Pension Plan Disability Beneficiaries Survey was a stratified random sampling design.

#### 5.1 Population Coverage

The target population was all persons receiving CPP disability benefits at the time of the survey, except residents of the Yukon and the Northwest Territories. The provinces were fully covered, with the exception of Quebec. Since most Quebec residents belong to the Quebec Pension Plan, only the small fraction of the province's population covered by the CPP was included in the target population.

The survey population differed somewhat from the target population. The sample was selected from a list frame that covered the whole target population of beneficiaries. However, the list contained only the addresses of the households, and since the data were collected by telephone, only persons living in households for which a telephone number could be found were included in the survey population. In practice, that means that the following groups were excluded:

- persons living in households with no telephone;
- some persons who received their benefits by direct deposit;
- some persons whose benefits were deposited in trust.

For the last two groups, there was no address and therefore no telephone number could be found.

Although it is difficult to estimate with any precision, the three excluded groups in all likelihood made up less than 1% of the target population.

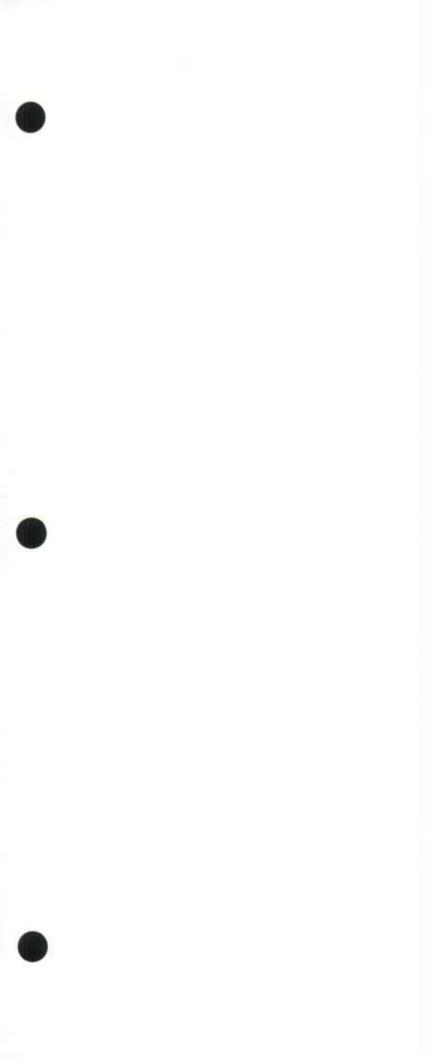

#### 5.2 Sample Stratification and Allocation

Stratification was based on three variables: the beneficiary's age (18-34, 35-44, 45-49, 50-54, 55-59, 60-64), the beneficiary's sex (male, female) and the benefit period (under 2 years, 2-5 years, 6-9 years, 10 years or more). Since every combination of the three variables constituted a stratum, there were 48 strata in all.

The sample was allocated in such a way as to satisfy the minimum precision requirements for the sex-by-age and sex-by-benefit-period marginals. Specifically, the aim was to be able to estimate a proportion of 0.10 with a coefficient of variation of 16.5% for each marginal, given the expected response rate. A special algorithm was used to determine the required sample sizes for each marginal and then to allocate the sizes across the strata while optimizing the overall precision for all strata combined.

# 5.3 Sample selection

Once the sample sizes had been set for all strata, the sample was selected at random in each stratum. To ensure that the sample was geographically representative, the beneficiary population of each stratum was sorted by province of residence, and a systematic sample of beneficiaries was chosen.

#### 6. DATA COLLECTION

Data collection for the Canada Pension Plan Disability Beneficiaries Survey used Computer-Assisted Telephone Interviewing (CATI). The survey questions and response categories are programmed into a CATI application. The interviewer reads the question to the respondent and enters the respondent's answer into the application. Thus, data collection and data capture occur simultaneously. The application is programmed to ensure that only valid answers can be entered, the proper flow between questions is automatic, and discrepancies between answers to related questions are passed through an edit and, if necessary, the respondent is asked to verify or correct the response(s) in error.

#### 6.1 Question Design

The Survey had several components. Respondents were first screened to verify if they were part of the target population. Then basic demographic information on the respondents and the household members was collected. A series of disability related questions followed. Education, training and literacy questions were then asked. Questions on the respondent's past and current employment situations were also asked. The respondents' perception of the CPP services was then ascertained. Finally, questions related to disability related expenses and to the respondent's income were asked. For more detailed information, refer to the questionnaire in section 12.

The questions themselves were mostly taken or modelled from other surveys. Sources from Statistics Canada include the 1991 Health Activity Limitations Survey and the 1987 Canada Pension Plan Survivors and Disability Beneficiaries Surveys. From Human Resources Development, questionnaire content from The Study on Pensioners (1987) and the Social Security Reform Questionnaire (1993) were also used in the development of the questionnaire.

## 6.2 Supervision and Control

All CATI interviewers are under the supervision of senior interviewers who are responsible for ensuring that interviewers are familiar with the concepts and procedures of the survey, and also for periodically monitoring their interviewers. Monitoring of the interviewers consisted of the supervisor listening to the telephone interview and watching the responses being entered into the CATI application. Any errors or problems were noted and immediately brought to the attention of the interviewer.

#### 6.3 Data Collection Methodology

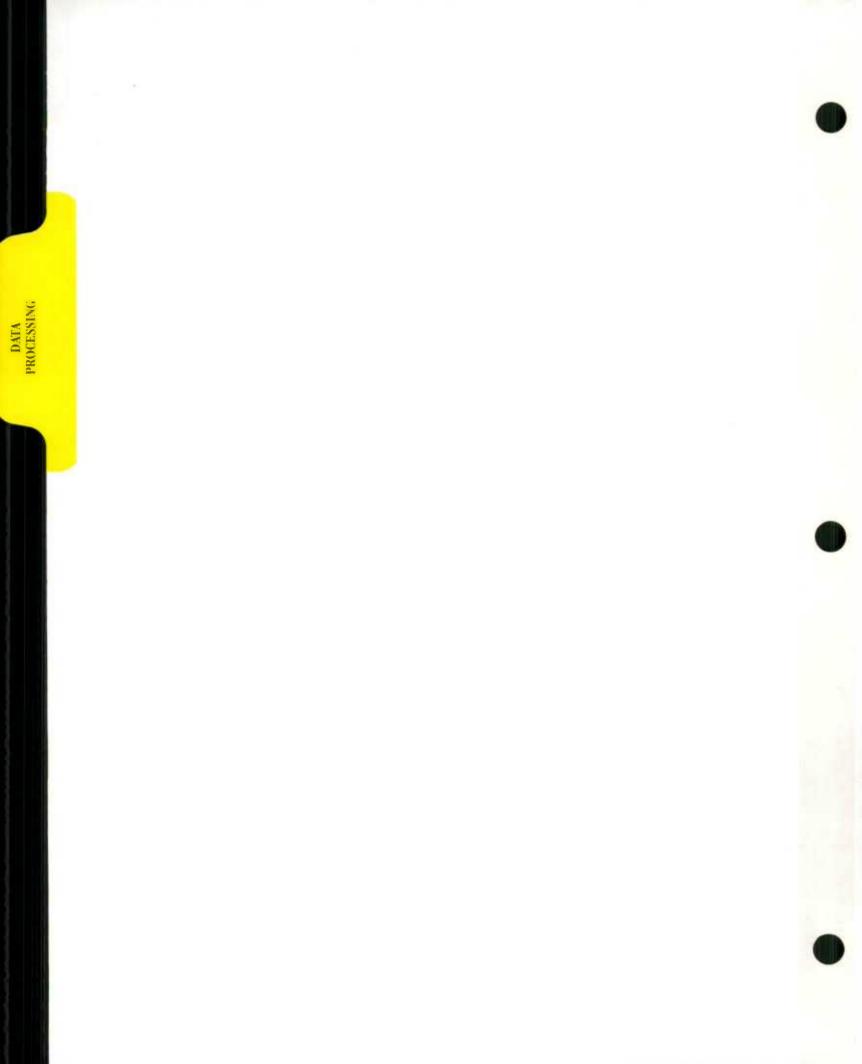

The CPP Disability Beneficiaries Survey was conducted with the individual who initially reported receiving disability benefits. In some instances due to various circumstances, the beneficiary was unable to complete the survey and thus, a suitable proxy was engaged. Such circumstances may have included a physical or psychological limitation, unable to use the telephone because of deafness or an inability to communicate over the telephone. If a respondent did not wish to allow a proxy to complete the survey or they insisted on completing it themselves and the telephone was not an appropriate vehicle to do so, the questionnaire was mailed to the respondent and was subsequently mailed back to head office where it was data captured using the CATI system. Furthermore, if this selected person was not available to be interviewed at that time, an attempt was made to determine a convenient time to phone back to complete the interview.

#### 6.4 Collection Period

Interviews were conducted from Statistics Canada's head office (Operations and Integration Division) during the month of May, 1995. All interviews took place between 7:30 AM and 11:00 PM Eastern Standard Time, Monday to Thursday and between 1:00 PM and 9:00 PM on Sundays.

## 7. DATA PROCESSING

The main output of the Canada Pension Plan Disability Beneficiaries Survey is a "clean" microdata file. This section presents a brief summary of the processing steps involved in producing this file.

#### 7.1 Data Capture

No separate data capture step was needed for this survey. Computer-Assisted interviewing means that the data collection and capture are combined into a single process.

# 7.2 Editing

Raw data was collected for 4153 selected respondents; 58 were dropped because of insufficient data. To accommodate most statistical packages, all blank fields were converted to a numeric value. Questions that were skipped because of a flow pattern in the questionnaire were assigned a code to indicate a "valid skip". Responses of "don't know" or "refused" were also assigned specific codes.

#### 7.3 Creation of Derived Variables

After all numerical verification was completed, derived variables were created to help in subsequent analyses of the data. These include:

(i) **DVLICO** 

Indicates whether the respondent is living above or below the Low Income Cut-Offs as defined by Statistics Canada.

- (ii) DVTENURE Tells if the respondent owns or rents their dwelling and if they are currently carrying a mortgage.
- (iii) DVLIVING To indicate if respondent is living in an institution, alone or with others in a household
- (iv) DVRETWRK Measures the respondent's perception whether they would be able to return to work in the near future.
- (v) DVSEVERE Indicates the severity level of the respondent's disability.

- (vi) DVINCSRC Total of all reported individual sources of income
- (vi) DVTOTINC Total reported income coming into the family from all sources reported

The specifications used to create the derived variables can be found in Appendix 1, Specifications for Derived Variables.

# 7.4 <u>Weighting</u>

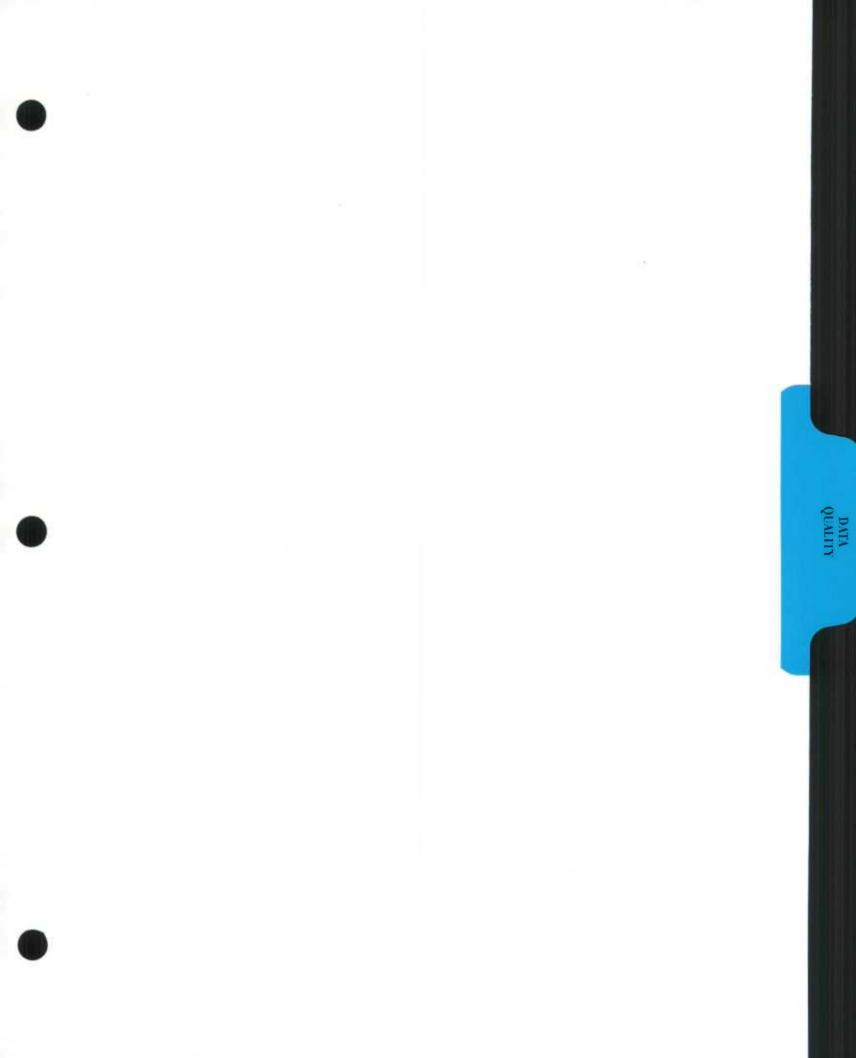

The principle behind estimation in a probability sample such as the CPP Disability Beneficiaries Survey is that each person in the sample "represents", besides himself or herself, several other persons not in the sample. For example, in a simple random 2% sample of the population, each person in the sample represents 50 persons in the population.

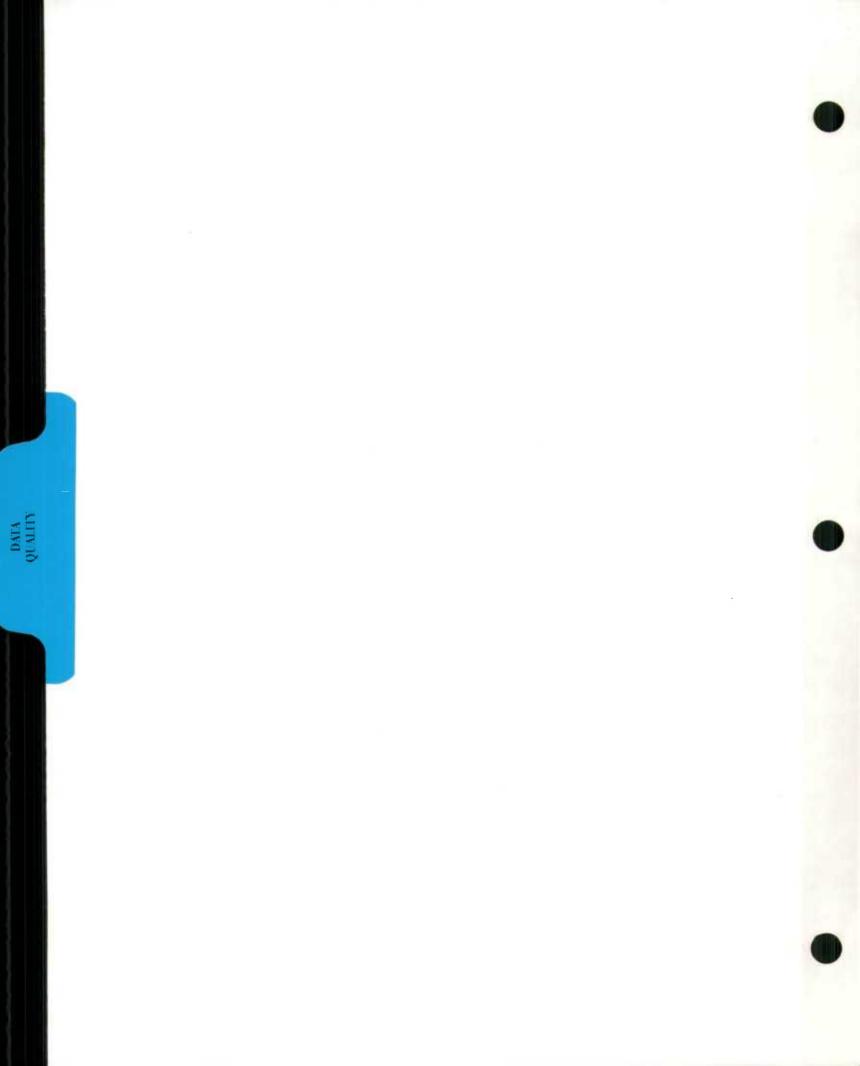

The weighting phase is a step which calculates this number for each record. This weight is used to derive estimates from the microdata file. For example, if the number of disability beneficiaries in Canada who live in an urban area is to be estimated, it is done by selecting the records referring to beneficiaries with that characteristic (Q08=1) and summing the weights (WEIGHT) of those records.

Details of the method used to calculate these weights are presented in Section 11.

#### 7.5 Suppression of Confidential Information

Any table generated from this file for client use will be screened in order to ensure respondents' confidentiality. Answer categories are suppressed or collapsed into larger categories in order to ensure confidentiality.

# 8. DATA QUALITY

## 8.1 Response Rates

Two main levels of non-response were identified in this survey. First, as noted in section 5.1, it was necessary to look for telephone numbers matching the names and addresses of persons selected for inclusion in the sample. A total of 6,693 persons were selected, and telephone numbers were found for 5,959, or 89.0%. The remaining 11.0% constitute the first level of non-response.

The second level of non-response consists of persons with whom a telephone interview was attempted but for whom a sufficiently complete questionnaire could not be obtained. A questionnaire was deemed to be sufficiently complete if it contained valid answers to at least 10 of 25 questions previously identified as essential. Of the 5,959 people with whom a telephone interview was attempted, 4,095, or 68.7%, qualified as respondents by this criterion. Of the 1,864 non-responses, 1,806 were total non-responses and 58 were partial responses that did not have the required minimum number of valid answers to the 25 key questions.

Age group	Sample	Respondents	Response Rate (%)
18-34	995	544	54.7
35-44	1036	587	56.7
45-49	1031	602	58.4
50-54	1042	661	63.4
55-59	1141	739	64.8
60-64	1448	962	66.4
Total	6693	4095	61.2

Table 1: Response Rate by Age

Sex	Sample	Respondents	Response Rate (%)
Men	3387	2113	62.4
Women	3306	1982	60.0
Total	6693	4095	61.2

Table 2: Response Rate by Sex

Table 3: Response Rate by Length of Time for which Benefits were Received

Length	Sample	Respondents	Response Rate (%)
< 2 yrs	1292	827	64.0
2-5 yrs	2970	1801	60.6
6-9 yrs	1363	822	60.3
>10 yrs	1068	645	60.4
Total	6693	4095	61.2

#### 8.2 Survey Errors

The survey produces estimates based on information collected from and about a sample of individuals. Somewhat different estimates might have been obtained if a complete census had been taken using the same questionnaire, interviewers, supervisors, processing methods, etc. as those actually used in the survey. The difference between the estimates obtained from the sample and those resulting from a complete count taken under similar conditions is called the <u>sampling error</u> of the estimate.

Errors which are not related to sampling may occur at almost every phase of a survey operation. Interviewers may misunderstand instructions, respondents may make errors in answering questions, the answers may be incorrectly entered on the computer and errors may be introduced in the processing and tabulation of the data. These are all examples of non-sampling errors.

Over a large number of observations, randomly occurring errors will have little effect on estimates derived from the survey. However, errors occurring systematically will contribute to biases in the survey estimates. Considerable time and effort was made to reduce non-sampling errors in the survey. Quality assurance measures were implemented at each step of the data collection and processing cycle to monitor the quality of the data. These measures included extensive training of interviewers with respect to the survey procedures and CATI application; monitoring of interviewers to detect problems of questionnaire design or misunderstanding of instructions; and testing of the CATI application to ensure that range checks, edits and question flow were all programmed correctly.

# 8.2.1 Total Non-Response

Total non-response can be a major source of non-sampling error in many surveys, depending on the degree to which respondents and non-respondents differ with respect to the characteristics of interest. As explained previously, total non-response occurred when the selected person could not be contacted or refused to participate in the survey. Total non-response was handled by adjusting the weight of individuals who responded to the survey to compensate for those who did not respond.

## 8.2.2 Partial Non-Response

Partial non-response to the survey occurred when the respondent refused to answer a question, or could not recall the requested information. These have specific codes. See the record layout for further information.

#### 8.2.3 Measures of Sampling Error

Since it is an unavoidable fact that estimates from a sample survey are subject to sampling error, sound statistical practice calls for researchers to provide users with some indication of the magnitude of this sampling error. The basis for measuring the potential size of sampling errors is the standard error of the estimates derived from survey results. However, because of the large variety of estimates that can be produced from a survey, the standard error of an estimate is usually expressed relative to the estimate to which it pertains. This resulting measure, known as the coefficient of variation (C.V.) of an estimate, is obtained by dividing the standard error of the estimate by the estimate itself and is expressed as a percentage of the estimate.

For example, suppose that, based upon the survey results, one estimates that 80% of disability beneficiaries live in an urban area, and this estimate is found to have standard error of .0088. Then the coefficient of variation of the estimate is calculated as:

$$\left(\frac{.0088}{.80}\right) \times 100\% = 1.1\%$$

#### 9. GUIDELINES FOR ANALYSIS AND RELEASE

This section of the documentation outlines the guidelines to be adhered to by users analysing, publishing or otherwise releasing any data derived from the survey micro data tapes.

# 9.1 Rounding Guidelines

For publication or other release derived from these micro data tapes, users are urged to adhere to the following guidelines regarding the rounding of such estimates:

- a) Estimates in the main body of a statistical table are to be rounded to the nearest hundred units using the normal rounding technique. In normal rounding, if the first or only digit to be dropped is 0 to 4, the last digit to be retained is not changed. If the first or only digit to be dropped is 5 to 9, the last digit to be retained is raised by one. For example, in normal rounding to the nearest 100, if the last two digits are between 00 and 49, they are changed to 00 and the preceding digit (the hundreds digit) is left unchanged. If the last digits are between 50 and 99 they are changed to 00 and the preceding digit is incremented by 1.
- b) Marginal sub-totals and totals in statistical tables are to be derived from their corresponding unrounded components and then are to be rounded themselves to the nearest 100 units using normal rounding.
- c) Averages, proportions, rates and percentages are to be computed from unrounded components (i.e. numerators and/or denominators) and then are to be rounded themselves to one decimal using normal rounding. In normal rounding to a single digit, if the final or only digit to be dropped is 0 to 4, the last digit to be retained is not changed. If the first or only digit to be dropped is 5 to 9, the last digit to be retained is increased by 1.
- d) Sums and differences of aggregates (or ratios) are to be derived from their corresponding unrounded components and then are to be rounded themselves to the nearest 100 units (or the nearest one decimal) using normal rounding.

U

- e) In instances where, due to technical or other limitations, a rounding technique other than normal rounding is used resulting in estimates to be published or otherwise released which differ from corresponding estimates published by Statistics Canada, users are urged to note the reason for such differences in the publication or release document(s).
- f) Under no circumstances are unrounded estimates to be published or otherwise released by users. Unrounded estimates imply greater precision than actually exists.

# 9.2 <u>Guidelines for Statistical Analysis</u>

The CPP Disability Beneficiaries Survey is based upon a complex design, with stratification and unequal probabilities of selection of respondents. Using data from such complex surveys presents problems to analysts because the survey design and the selection probabilities affect the estimation and variance calculation procedures that should be used.

In order to provide a means of assessing the quality of tabulated estimates, Statistics Canada has produced a set of Approximate Sampling Variability Tables (commonly referred to as "C.V. Tables") for the CPP Disability Beneficiaries Survey. These tables can be used to obtain approximate coefficients of variation for categorical-type estimates and proportions. See Section 10 for more details.

# 9.3 C.V. Release Guidelines

Before releasing and/or publishing any estimate from these micro data tapes, users should first determine the number of respondents who contribute to the calculation of the estimate. If this number is less than 30, the weighted estimate should not be released regardless of the value of the coefficient of variation for this estimate. For weighted estimates based on sample sizes of 30 or more, users should determine the coefficient of variation of the **rounded** estimate and follow the guidelines below.

# Sampling Variability Guidelines

Type of Estimate	C.V. (in %)	Guidelines
1. Unqualified	0.0 - 16.5	Estimates can be considered for general unrestricted release. Requires no special notation.
2. Qualified	16.6 - 25.0	Estimates can be considered for general unrestricted release but should be accompanied by a warning cautioning subsequent users of the high sampling variability associated with the estimates. Such estimates should be identified by the letter Q (or in some other similar fashion).
3. Restricted	25.1 - 33.3	Estimates can be considered for general unrestricted release only when sampling variabilities are obtained using an exact variance calculation procedure. Unless exact variances are obtained, such estimates should be deleted and replaced by dashes () in statistical tables.
4. Not for Release	33.4 or greater	Estimates cannot be released in any form under any release OR circumstances. In statistical tables, such estimates should be deleted and replaced by dashes ().

# 10. APPROXIMATE SAMPLING VARIABILITY TABLES

In order to supply coefficients of variation which would be applicable to a wide variety of categorical estimates produced from this micro data file and which could be readily accessed by the user, a set of Approximate Sampling Variability Tables has been produced. These "look-up" tables allow the user to obtain an approximate coefficient of variation based on the size of the estimate calculated from the survey data.

The coefficients of variation (C.V.) are derived using the variance formula for simple random sampling and incorporating a factor which reflects the stratified nature of the sample design. This factor, known as the design effect, was determined by first calculating design effects for a wide range of characteristics and then choosing from among these a conservative value to be used in the look-up tables which would then apply to the entire set of characteristics.

The following table shows the design effects, sample sizes and population counts by age, sex and length of benefit which were used to produce the Approximate Sampling Variability Tables.

Variable	Value(s)	Design effect	Sample size	Population
Age	18-34	0.99	544	11271
	35-44	1.02	587	38547
	45-49 ·	1.00	602	31883
	50-54	1.00	661	42241
	55-59	• 1.11	739	65756
	60-64	1.38	962	97099
Sex	Male	1.40	1982	165285
	Female	1.32	2113	121512
Length	< 2	1.12	827	44861
	2 - 5	1.61	1801	142940
	6 - 9	1.12	822	61879
	>=10	1.06	645	37117
	All	1.39	4095	286797

Table of Design Effects

All coefficients of variation in the Approximate Sampling Variability Tables are <u>approximate</u> and, therefore, unofficial. Estimates of actual variance for specific variables may be obtained from Statistics Canada on a cost-recovery basis. The use of actual variance estimates would allow users to release otherwise unreleaseable estimates, i.e. estimates with coefficients of variation in the 'confidential' range.

<u>Remember</u>: If the number of observations on which an estimate is based is less than 30, the weighted estimate should not be released regardless of the value of the coefficient of variation for this estimate. This is because the formulas used for estimating the variance do not hold true for small sample sizes.

# 10.1 How to Use the C.V. Tables for Categorical Estimates

The following rules should enable the user to determine the approximate coefficients of variation from the Sampling Variability Tables for estimates of the number, proportion or percentage of the surveyed population possessing a certain characteristic and for ratios and differences between such estimates.

# **Rule 1:** Estimates of Numbers Possessing a Characteristic (Aggregates)

The coefficient of variation depends only on the size of the estimate itself. On the Sampling Variability Table for the appropriate category, locate the estimated number in the left-most column of the table (headed "Numerator of Percentage") and follow the asterisks (if any) across to the first figure encountered. This figure is the approximate coefficient of variation.

# Rule 2: Estimates of Proportions or Percentages Possessing a Characteristic

The coefficient of variation of an estimated proportion or percentage depends on both the size of the proportion or percentage and the size of the numerator of the proportion or percentage. Estimated proportions or percentages are relatively more reliable than the corresponding estimates of the numerator of the proportion or percentage, when the proportion or percentage is based upon a sub-group of the population. For example, the proportion of male beneficiaries living in an urban area is more reliable than the estimated number of male beneficiaries living in an urban area. (Note that in the tables the coefficients of variation decline in value reading from left to right.)

When the proportion or percentage is based upon the total population of the category covered by the table (i.e. if the denominator is equal to the total population), the coefficient of variation of the proportion or percentage is the same as the coefficient of variation of the numerator of the proportion or percentage. In this case, Rule 1 can be used.

When the proportion or percentage is based upon a subset of the total population (e.g. those in a particular province), reference should be made to the proportion or percentage (across the top of the table) and to the numerator of the proportion or percentage (down the left side of the table). The intersection of the appropriate row and column gives the coefficient of variation.

#### **Rule 3:** Estimates of Differences Between Aggregates or Percentages

The standard error of a difference between two estimates is approximately equal to the square root of the sum of squares of each standard error considered separately. That is, the standard error of a difference  $(d = X_1 - X_2)$  is:

$$\sigma_{\hat{d}} = \sqrt{(\hat{X}_1 \alpha_1)^2 + (\hat{X}_2 \alpha_2)^2}$$

where  $X_1$  is estimate 1,  $X_2$  is estimate 2, and  $\alpha_1$  and  $\alpha_2$  are the coefficients of variation of  $X_1$  and  $X_2$  respectively. The coefficient of variation of d is given by  $\sigma_d/d$ . This formula is accurate for the difference between separate and uncorrelated characteristics, but is only approximate otherwise.

#### Rule 4: Estimates of Ratios

A ratio is an estimate taking the form  $R = X_1/X_2$  where  $X_1$  and  $X_2$  are both quantities estimated from the survey. In the case where the numerator  $(X_1)$  is a subset of the denominator  $(X_2)$ , the ratio should be converted to a percentage and Rule 2 applied. This would apply, for example, to the case where the denominator is the number of male beneficiaries and the numerator is the number of male beneficiaries living in an urban area.

The ratio of the number of female beneficiaries living in an urban area as compared to the number of male beneficiaries living in an urban area is an example where the numerator is not a subset of the denominator. In this case, the standard deviation of the ratio of the estimates is approximately equal to the square root of the sum of squares of each coefficient of variation considered separately multiplied by R. That is, the standard error of a ratio ( $\mathbf{R} = X_1/X_2$ ) is:

$$\sigma_{\hat{R}} = \hat{R}\sqrt{\alpha_1^2 + \alpha_2^2}$$

where  $\alpha_1$  and  $\alpha_2$  are the coefficients of variation of  $X_1$  and  $X_2$  respectively.

The coefficient of variation of R is given by  $\sigma_R/R$ . The formula will tend to overstate the error, if  $X_1$  and  $X_2$  are positively correlated and understate the error if X and 2X are negatively correlated.

# **Rule 5:** Estimates of Differences of Ratios

In this case, Rules 3 and 4 are combined. The coefficients of variation for the two ratios are first determined using Rule 4, and then the coefficient of variation of their difference is found using Rule 3.

# 10.2 Examples of Using the C.V. Tables for Categorical Estimates

The following 'real life' examples are included to assist users in applying the foregoing rules.

# Example 1: Estimates of Numbers Possessing a Characteristic (Aggregates)

Suppose that a user estimates that 80,889 male beneficiaries reported having back or joint problems. How does the user determine the coefficient of variation of this estimate?

- (1) Refer to the c.v. table for "Males".
- (2) The estimated aggregate (80,889) does not appear in the left-hand column (the 'Numerator of Percentage' column), so it is necessary to use the figure closest to it, namely 80,000.
- (3) The coefficient of variation for an estimated aggregate is found by referring to the first non-asterisk entry on that row, namely, 2.6%.
- (4) So the approximate coefficient of variation of the estimate is 2.6%.

The finding that 80,889 male beneficiaries have back or joint problems is publishable with no qualifications.

Suppose now that the user is interested in finding the coefficient of variation for the estimate of the number of male beneficiaries aged 60-64 who have back or joint problems. Since there is no c.v. table specific to males aged 60-64, it is suggested to use the table corresponding to the category with the highest design effect. Here the c.v. table for "Males" would be used, since the design effect for "Males" is 1.40 which is higher than the design effect for "People aged 60-64" (1.38). If the estimate is 33,040, then the coefficient of variation is found to be 4.8% according to the rule above. In general, the same strategy should be used when dealing with cross-tabulations, regardless of the type of estimate (aggregates, proportions, etc.).

# **Example 2: Estimates of Proportions or Percentages Possessing a Characteristic**

Suppose that the user estimates that 13,243/154,246 = 8.6% of beneficiaries having back or joint problems are completely unable to do any type of work now, but may be able in the future. How does the user determine the coefficient of variation of this estimate?

- (1) Refer to the c.v. table for All ("All" level tables should be used because the denominator is based on a characteristic that applies to the total population of beneficiaries).
- (2) Because the estimate is a percentage which is based on a subset of the total population (beneficiaries having back or joint problems), it is necessary to use both the percentage (8.6%) and the numerator portion of the percentage (13,243) in determining the coefficient of variation.
- (3) The numerator, 13,243 does not appear in the left-hand column (the 'Numerator of Percentage' column) so it is necessary to use the figure closest to it, namely 13,000. Similarly, the percentage estimate does not appear as any of the column headings, so it is necessary to use the figure closest to it, 10.0%.
- (4) The figure at the intersection of the row and column used, namely 8.2% is the coefficient of variation to be used.
- (5) So the approximate coefficient of variation of the estimate is 8.2%.

The finding that 8.6% of beneficiaries having back or joint problems are completely unable to do any type of work now, but may be able in the future can be published with no qualifications.

## **Example 3: Estimates of Differences Between Aggregates or Percentages**

Suppose that a user estimates that 80,889 male beneficiaries have back or joint problems, as compared to 73,357 female beneficiaries. How does the user determine the coefficient of variation of the difference between these two estimates?

- (1) Using the c.v. table for Females in the same manner as described in Example 1 gives the c.v. of the estimate for females as 1.8% (we already know from Example 1 that the c.v. of the estimate for males is 2.6%).
- (2) Using Rule 3, the standard error of a difference  $(d = X_1 X_2)$  is:

$$\sigma_{\hat{d}} = \sqrt{(\hat{X}_{1}\alpha_{1})^{2} + (\hat{X}_{2}\alpha_{2})^{2}}$$

where  $X_1$  is estimate 1,  $X_2$  is estimate 2, and  $\alpha$  and  $\alpha$  are the coefficients of variation of  $X_1$  and  $X_2$  respectively.

That is, the standard error of the difference d = (80889-73357) = 7532

$$\sigma_{\hat{a}} = \sqrt{[(80889)(.026)]^2 + [(73357)(.018)]^2}$$
$$= \sqrt{(4423088) + (1743525)}$$
$$= 2483.27659.39$$

- (3) The coefficient of variation of  $\hat{d}$  is given by  $\sigma_{\hat{d}}/\hat{d} = 2483.27/7532 = 0.330$ .
- (4) So the approximate coefficient of variation of the difference between the estimates is 33.0%. Unless this coefficient of variation can be confirmed using an exact variance calculation procedure, the estimate should be deleted and replaced by dashes.

#### **Example 4: Estimates of Ratios**

Suppose that the user estimates that there are 112,301 beneficiaries with back or joint problems who say that they are completely unable to do any type of work now or in the future, while 24,963 say that they are able to do some work but may be limited in the kind or amount of work. The user is interested in comparing these two estimates in the form of a ratio. How does the user determine the coefficient of variation of this estimate?

- (1) First of all, this estimate is a ratio estimate, where the numerator of the estimate  $(=X_1)$  is the number of beneficiaries with back or joint problems who say that they are completely unable to do any type of work now or in the future. The denominator of the estimate  $(=X_2)$  is the number of beneficiaries with back or joint problems who say that they are able to do some work but may be limited in the kind or amount of work.
- (2) Refer to the c.v. table for All.
- (3) The numerator of this ratio estimate is 112,301. The figure closest to it is 100,000. The coefficient of variation for this estimate is found by referring to the first nonasterisk entry on that row, namely, 2.5%.

- (4) The denominator of this ratio estimate is 24,963. The figure closest to it is 25,000. The coefficient of variation for this estimate is found by referring to the first nonasterisk entry on that row, namely, 5.9%.
- (5) So the approximate coefficient of variation of the ratio estimate is given by Rule 4, which is,

$$\alpha_{\hat{R}} = \sqrt{\alpha_1^2 + \alpha_2^2}$$

where  $\alpha_1$  and  $\alpha_2$  are the coefficients of variation of  $X_1$  and  $X_2$  respectively.

That is,

$$\alpha_{\hat{R}} = \sqrt{(.025)^2 + (.059)^2} = 0.06469$$

The obtained ratio of beneficiaries with back or joint problems who say that they are completely unable to do any type of work now or in the future, to those who say that they are able to do some work but may be limited in the kind or amount of work, is 112,301/24,963 which is 4.50. The coefficient of variation of this estimate is 6.4%, which is releasable with no qualifications.

## 10.3 How to Use the C.V. Tables to Obtain Confidence Limits

Although coefficients of variation are widely used, a more intuitively meaningful measure of sampling error is the confidence interval of an estimate. A confidence interval constitutes a statement on the level of confidence that the true value for the population lies within a specified range of values. For example a 95% confidence interval can be described as follows:

If sampling of the population is repeated indefinitely, each sample leading to a new confidence interval for an estimate, then in 95% of the samples the interval will cover the true population value.

Using the standard error of an estimate, confidence intervals for estimates may be obtained under the assumption that under repeated sampling of the population, the various estimates obtained for a population characteristic are normally distributed about the true population value. Under this assumption, the chances are about 68 out of 100 that the difference between a sample estimate and the true population value would be less than one standard

error, about 95 out of 100 that the difference would be less than two standard errors, and about 99 out 100 that the differences would be less than three standard errors. These different degrees of confidence are referred to as the confidence levels.

Confidence intervals for an estimate, X, are generally expressed as two numbers, one below the estimate and one above the estimate, as (X-k, X+k) where k is determined depending upon the level of confidence desired and the sampling error of the estimate.

Confidence intervals for an estimate can be calculated directly from the Approximate Sampling Variability Tables by first determining from the appropriate table the coefficient of variation of the estimate  $\hat{X}$ , and then using the following formula to convert to a confidence interval CI:

$$CI_{\chi} = [\hat{X} - t\hat{X}\alpha_{\hat{\chi}}, \hat{X} + t\hat{X}\alpha_{\hat{\chi}}]$$

where	α <sub>X</sub>	is the determined coefficient of variation of X, and
	t = 1	if a 68% confidence interval is desired
	t = 1.6	if a 90% confidence interval is desired
	t = 2	if a 95% confidence interval is desired
	t = 3	if a 99% confidence interval is desired.

<u>Note</u>: Release guidelines which apply to the estimate also apply to the confidence interval. For example, if the estimate is not releasable, then the confidence interval is not releasable either.

## 10.4 Example of Using the C.V. Tables to Obtain Confidence Limits

A 95% confidence interval for the estimated proportion of beneficiaries having back or joint problems who are completely unable to do any type of work now, but may be able in the future (from Example 2) would be calculated as follows.

 $\hat{X} = 8.6\%$  (or expressed as a proportion = .086)

t = 2

 $\alpha_{\overline{X}} = 8.2\%$  (.082 expressed as a proportion) is the coefficient of variation of this estimate as determined from the tables.

 $CI_x = \{.086 - (2) (.086) (.082), .086 + (2) (.086) (.082)\}$ 

 $CI_x = \{.086 - .014, .086 + .014\}$ 

 $CI_{X} = \{.072, .100\}$ 

With 95% confidence it can be said that between 7.2% and 10.0% of beneficiaries having back or joint problems are completely unable to do any type of work now, but may be able in the future.

# 10.5 How to Use the C.V. Tables to do a T-Test

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The sample estimates can be numbers, averages, percentages, ratios, etc. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the characteristics are different when, in fact, they are identical.

Let  $X_1$  and  $X_2$  be sample estimates for two characteristics of interest. Let the standard error on the difference  $X_1$ - $X_2$  be  $\sigma_d$ .

If  $t = \frac{\hat{X}_1 - \hat{X}_2}{\sigma_d}$  is between -2 and 2, then no conclusion about the difference between

the characteristics is justified at the 5% level of significance. If however, this ratio is smaller than -2 or larger than +2, the observed difference is significant at the 0.05 level. That is to say that the characteristics are significant.

# 10.6 Example of Using the C.V. Tables to do a T-Test

Let us suppose we wish to test, at 5% level of significance, the hypothesis that there is a difference between the number of male beneficiaries having back or joint problems and the number of female beneficiaries having back or joint problems. From Example 3, the standard error of the difference between these two estimates was found to be 2483.27. Hence,

 $t = \frac{\hat{X}_1 - \hat{X}_2}{\sigma_{\hat{d}}} = \frac{80889 - 73357}{2483.27} = \frac{7532}{2483.27} = 3.032.83$ 

Since t = 3.03 is greater than 2, it must be concluded that there is a significant difference between the two estimates at the 0.05 level of significance.

#### 10.7 Coefficients of Variation for Quantitative Estimates

For quantitative estimates, special tables would have to be produced to determine their sampling error. Since most of the variables for the Survey of CPP Disability Beneficiaries are primarily categorical in nature, this has not been done.

As a general rule, however, the coefficient of variation of a quantitative total will be larger than the coefficient of variation of the corresponding category estimate (i.e., the estimate of the number of persons contributing to the quantitative estimate). If the corresponding category estimate is not releasable, the quantitative estimate will not be either. Users wishing to derive coefficients of variation for quantitative estimates may contact Statistics Canada and request ad-hoc tables.

# 10.8 Release Cut-Offs for the C.P.P. Disability Beneficiaries Survey

The minimum size of the estimate for various categories of estimates are specified in the table below. Estimates smaller than the minimum size given in the "Restricted" column may <u>not</u> be released under any circumstances.

Variable	Value(s)	Unqualified	Qualified	Restricted
Age	18-34	500	500	0
	35-44	2500	1000	500
	45-49	2000	1000	500
	50-54	2000	1000	500
	55-59	3500	1500	1000
	60-64	5000	2000	1000
Sex	Male	4000	1500	1000
	Female	3000	1500	500
Length	< 2	2000	1000	500
	2 - 5	4500	2000	1000
	6 - 9	3000	1500	1000
	>=10	2000	1000	500
1	A11	3500	1500	1000

**Table of Release Cut-Offs** 

# 10.9 <u>C.V. Tables</u>

The C.V. tables to be used for the analysis of data from the Survey of CPP Disability Beneficiaries are given on the following pages.

NOTE: FOR CORRECT USAGE OF THESE TABLES PLEASE REFER TO MICRODATA DOCUMENTATION

WEIGHTING

## 11. WEIGHTING

Determining the weights assigned to each record was a two-step process. -

## 11.1 Basic Weight

The basic weight was equal to the inverse of a person's probability of being selected. All persons in the same stratum had the same basic weight. For example, if there were 1,000 people in a stratum and 100 of them were selected, the probability of selection was 100/1000 = 0.1, and the basic weight of each person selected was 1/0.1 = 10.

## 11.2 Non-response adjustment

It was necessary to compensate for the fact that some of the people selected did not respond to the survey for one reason or another. This adjustment was made by multiplying the weight of the respondents by the ratio

## number of persons selected number of respondents

The adjustment was performed separately in each stratum. Following this stage, all persons belonging to the same stratum had the same weight. This is the final weight used in the microdata file.

## 12. QUESTIONNAIRE

Since the survey was conducted using Computer-Assisted interviewing, there is no actual questionnaire form. However, the survey questions and the flow patterns are reproduced below. Numeric values beside the various answers to the questions do not necessarily reflect the final value given to the answers themselves or to the respondents. See the record layout for proper coding scheme for each question.

Note: the letter Q indicates a question whereas the letter C indicates a condition that responses are compared to.

## **Canada Pension Plan Disability Beneficiaries Survey**

## **CPP-START**

CON Hello, could I speak with % respondent %?

<yes></yes>	(Go to I01)
<no, at="" this="" time="" unable=""></no,>	(Make appointment)
< No longer lives here, but can contact >	(Obtain new information to contact)
< Unable to communicate on phone >	Why? - Incapacitated - proxy interview
	- Language barrier - proxy interview
	- TDD - make arrangements
<no contact="" here,="" lives="" longer="" to="" unable=""></no>	(Non-response - end interview)
< Deceased >	(Non-response - end interview)

101 My name is % interviewer name% and I am calling you from Statistics Canada. We are conducting a survey, on behalf of Human Resources Development, of persons who receive disability benefits from the Canada Pension Plan. A letter was sent to you in April concerning this survey. The information that you provide will be kept strictly confidential and will be used for research purposes only. This information is being collected to assess how well the Canada Pension Plan disability benefit serves the needs of those who receive it, and whether it could be improved. This information will not be used in any way to change your personal benefits. During the survey, my supervisor may listen in to assess the survey. Would you prefer to be interviewed in English or French?

(Go to Q01)

#### Q01 Are you currently receiving Canada Pension Plan disability benefits?

<2> No         (Go to C02)           <8> Refused         (Go to C02)	<1> Yes	(Go to C02)
	<2> No	(Go to C02)
	<8> Refused	(Go to C02)
$\langle 9 \rangle$ Don't know (Go to C02)	<9> Don't know	(Go to C02)

- C02 If <2> or <8> or <9> is chosen in Q01 go to Q02, else go to Q03.
- Q02 Why are you no longer receiving Canada Pension Plan disability benefits?

<1>	Never received disability benefit	(Go to Q74)
<2>	Retired - receive Canada Pension Plan retirement benefits	(Go to Q74)
<3>	Returned to work	(Go to Q74)
<4>	Recovered from disability	(Go to Q74)
<5>	Benefits were stopped	(Go to Q74)
<6>	Other	(Go to Q74)
<8>	Refused	(Go to Q74)
<9>	Don't know	(Go to Q74)

Q03 How long have you been receiving Canada Pension Plan disability benefits?

	< YY > < MM >	(Go to Q04)
	<8> Refused	(Go to Q04)
	<9> Don't know	(Go to Q04)
Q04	How old are you?	
	<number of="" years=""></number>	(Go to Q05)
	<8> Refused	(Go to Q05)
	<9> Don't know	(Go to Q05)
Q05	What is your current marital status?	
	<1> Now married	(Go to Q06)
	<2> Living with a partner/Common law	(Go to Q06)
	<3> Single (never married)	(Go to Q06)
	<4> Separated	(Go to Q06)
	<5> Divorced	(Go to Q06)
	<6> Widowed	(Go to Q06)
	<8> Refused	(Go to Q06)
	<9> Don't know	(Go to Q06)
Q06	Were you born in Canada?	
	<1> Yes	(Go to C07)
	<2> No	(Go to C07)
	<8> Refused	(Go to C07)
	<9> Don't know	(Go to C07)
C07	If $<2>$ is chosen in Q06 go to Q07, else go to Q08.	
Q07	How long have you lived in Canada?	
	<number of="" years=""></number>	(Go to Q08)
	<8> Refused	(Go to Q08)
	<9> Don't know	(Go to Q08)
Q08	Do you live in an urban area, that is a town or city with a popularea?	alation of at least 1,000, or in a rural
	<1> An urban area	$(G_{0} + c_{0} G_{0})$
	<1> An urban area $<2>$ A rural area	(Go to C09) (Go to C09)
	<8> Refused	(Go to C09)

C09 If <1> is chosen in Q08 go to Q09, else go to Q10.

<9> Don't know

(Go to C09)

Q09 What is the approximate population of the town or city where you live? Is it.... (Read list. Mark one only)

<1>	500,000 and over	(Go to Q10)
<2>	100,000 to 499,999	(Go to Q10)
<3>	30,000 to 99,999	(Go to Q10)
<4>	Less than 30,000	(Go to Q10)
<8>	Refused	(Go to Q10)
<9>	Don't know	(Go to Q10)
<8>	Refused	(Go to Q10)

Q10 Do you currently live in a nursing home, chronic care hospital or other health care institution.

<1>	Yes	(Go to Q17)
<2>	No	(Go to Q11)
<8>	Refused	(Go to Q11)
<9>	Don't know	(Go to Q11)

Q11 Do you own or rent your dwelling?

(Go to C12)
(Go to C12)

- C12 If <1> is chosen in Q11 go to Q12 else go to Q13A.
- Q12 Are you currently paying a mortgage on this home?

<1>	Yes	(Go to Q13A)
<2>	No	(Go to Q13A)
<8>	Refused	(Go to Q13A)
<9>	Don't know	(Go to Q13A)

Q13 I am now going to ask you some questions about those persons living in your household. How many people other than yourself are now living or staying in your household who have no usual place of residence elsewhere?

<number of="" persons=""></number>		(Go to C14)
<0>	No one living with respondent	(Go to Q17)
<8>	Refused	(Go to Q17)
<9>	Don't know	(Go to Q17)

C13 If number of persons is greater than zero, continue to complete household composition roster. This is specified in tabular form on the CATI system.

Q13A	What are the fist names, age, sex and relationship to you of all persons now living of who have no usual place of residence elsewhere?	or staying with you (Go to Q14)
NOTE	: Q14 to Q16 are asked in a roster table.	
Q14	How old is %name%'s?	
	<number of="" years=""> &lt;8&gt; Refused</number>	(Go to Q15)
	<9> Don't know	(Go to Q15) (Go to Q15)
Q15	What is %name%'s sex?	
	<1> Male	(Go to Q16)
	<2> Female	(Go to Q16)
	<8> Refused	(Go to Q16)
	<9> Don't know	(Go to Q16)
Q16.	What is %name%'s relationship to you?	
	<01> Spouse/Partner	(Go to C17)
	<02> Son or daughter natural, adopted or step	(Go to C17)
	<03> Grandchild	(Go to C17)
	<04 > Son-in-law or daughter-in-law	(Go to C17)
	<05> Foster child (if less than 18 years old)	(Go to C17)
	<06> Parent	(Go to C17)
	<07> Parent-in-law	(Go to C17)
	<08> Brother or Sister	(Go to C17)
	<09> Other relative	(Go to C17)
	<10> Unrelated	(Go to C17)
	<98> Refused	(Go to C17)
	<99> Don't know	(Go to C17)

C17 Check for next %name% - Go to C14, else go to Q17.

I would now like to ask you a few general questions about your disability. What is the main health Q17 condition you have for which you receive Canada Pension Plan disability benefits? (Read list. Mark all that apply)

<01>	Back/Joint problems (eg. Arthritis/rheumatism)	(Go to Q18)
<02>	Heart/Stroke/High blood pressure	(Go to Q18)
<03>	Diabetes	(Go to Q18)
<04>	Psychiatric illness/Depression	(Go to Q18)
<05>	Deafness/Blindness	(Go to Q18)
<06>	Nervous system (eg. Multiple sclerosis)	(Go to Q18)
<07>	Cancer	(Go to Q18)
<08>	Infections/immunity disorders (eg. AIDS, tuberculosis)	(Go to Q18)
<09>	Allergies (eg. Asthma, environmental hypersensitivity)	(Go to Q18)
<10>	Lung disease	(Go to Q18)
<11>	Spinal cord injuries (eg. Paralysis)	(Go to Q18)
<12>	Substance addiction	(Go to Q18)
<13>	Other	(Go to Q18)
< 98 >	Refused	(Go to Q18)
<99>	Don't know	(Go to Q18)

I am now going to ask you some questions about activity limitations that you may have. Do you have Q18 any difficulty hearing what is said in a group conversation with at least three other people with a hearing aid if normally used?

<1>	Yes	(Go to Q18a)	Q18a -> Are you completely	unable to do this?
<2>	No	(Go to Q19)	<1> Yes	(Go to Q19)
<8>	Refused	(Go to Q19)	<2> No	(Go to Q19)
<9>	Don't know	(Go to Q19)	<8> Refused	(Go to Q19)
			<9> Don't know	(Go to Q19)

Q19 Do you have any difficulty seeing ordinary newsprint with glasses if normally worn?

<1>	Yes	(Go to Q19a)	Q19a -> Are you completely	unable to do this?
<2>	No	(Go to Q20)	<1> Yes	(Go to Q20)
<8>	Refused	(Go to Q20)	<2> No	(Go to Q20)
<9>	Don't know	(Go to Q20)	<8> Refused	(Go to Q20)
			<9> Don't know	(Go to Q20)

Q20

Do you have any difficulty speaking or being understood?

<1>	Yes	(Go to Q20a)	Q20a -> Are you completely unable to do this?
<2>	No	(Go to Q21)	<1> Yes (Go to Q21)
<8>	Refused	(Go to Q21)	<2> No (Go to Q21)
<9>	Don't know	(Go to Q21)	<8> Refused (Go to Q21)
			$\langle 9 \rangle$ Don't know (Go to Q21)

Q21 Do you have any difficulty walking 400 yards/400 metres without resting, about three city blocks?

<1>	Yes	(Go to Q21a)	Q21a -> Are you completely unable to do this?
<2>	No	(Go to Q22)	<1> Yes (Go to Q22)
< 8 >	Refused	(Go to Q22)	<2> No (Go to Q22)
<9>	Don't know	(Go to Q22)	<8> Refused (Go to Q22)
			<9> Don't know (Go to Q22)

Q22 Do you have any difficulty walking up and down a flight of stairs, about 12 steps?

<1>	Yes	(Go to Q22a)	Q22a -> Are you completely	unable to do this?
<2>	No	(Go to Q23)	<1> Yes	(Go to Q23)
< 8 >	Refused	(Go to Q23)	<2> No	(Go to Q23)
<9>	Don't know	(Go to Q23)	<8> Refused	(Go to Q23)
			<9> Don't know	(Go to Q23)

Q23 When standing, do you have any difficulty bending down and picking up an object from the floor, for example, a shoe?

<1>	Yes	(Go to Q23a)	Q23a -> Are you completely t	unable to do this?
<2>	No	(Go to Q24)	<1> Yes	(Go to Q24)
<8>	Refused	(Go to Q24)	<2> No	(Go to Q24)
<9>	Don't know	(Go to Q24)	<8> Refused	(Go to Q24)
			<9> Don't know	(Go to Q24)

Q24 Because of a long term physical condition or health problem, that is, one that is expected to last six months or more, are you limited in the kind or amount of activity you can do...

At home?	<1>	Yes	(Go to Q24b)
	<2>	No	(Go to Q24b)
	<8>	Refused	(Go to Q24b)
	<9>	Don't know	(Go to Q24b)

In other activities such as travel, sports or leisure? Q24b

<1>	Yes	(Go to Q25)
<2>	No	(Go to Q25)
<8>	Refused	(Go to Q25)
<9>	Don't know	(Go to Q25)

Q25 Because of a long term emotional, psychological, nervous or mental health condition, are you limited in the kind or amount of activity you can do...

Q25a At home?	<1>	Yes	(Go to Q25b)	
		<2>	No	(Go to Q25b)
		< 8 >	Refused	(Go to Q25b)
		<9>	Don't know	(Go to Q25b)

Q24a

Q25b In other activities such as travel, sports or leisure?

<1>	Yes	(Go to C26)
<2>	No	(Go to C26)
<8>	Refused	(Go to C26)
<9>	Don't know	(Go to C26)

Note: Questions Q26 through to Q28 will be asked after each Q26 response is marked. These questions will be asked in a matrix format.

- C26 If <1> is chosen in Q10, go to Q30, else go to Q26
- Q26 The next set of questions relates to how you deal with everyday activities. Do you require any assistance from others to do any of the following daily activities? (Read list. Mark all that apply)

<01>	Prepare your meals	(Go to C27)

Q55

67

Q57 In the next few questions we are interested in knowing about the service you receive from the Canada Pension Plan. From which sources did you first learn that you might be eligible for Canada Pension Plan disability benefits? (Do not read list. Mark all that apply)

<01> Federal or provincial government department	(Go to Q58)
<02> Family or friend	(Go to Q58)
<03> Doctor or nurse	(Go to Q58)
<04> Social worker	(Go to Q58)
<05> Lawyer/accountant	(Go to Q58)
<06> Insurance company	(Go to Q58)
<07> Employment	(Go to Q58)
<08> Other (specify)	(Go to Q58)
<98> Refused	(Go to Q58)
<99> Don't know	(Go to Q58)

Q58 Did you receive your Canada Pension Plan disability benefits as a result of your initial application or an appeal?

<1>	Initial application	(Go to Q59)
<2>	Appeal	(Go to Q59)
<8>	Refused	(Go to Q59)
<9>	Don't know	(Go to Q59)

Q59 Did you request information from Health & Welfare Canada or Human Resources Development when you first applied for Canada Pension Plan disability benefits?

•	<1>	Yes	(Go to Q60)
	<2>	No	(Go to Q62)
•	<8>	Refused	(Go to Q62)
	<9>	Don't know	(Go to Q62)

Q60 Did you receive the information from them?

<1>	Yes	(Go to Q61)
<2>	No	(Go to Q62)
<8>	Refused	(Go to Q62)
<9>	Don't know	(Go to Q62)

Q61 How useful was the information from them?

<1>	Very useful	(Go to Q62)
<2>	Useful	(Go to Q62)
<3>	Not very useful	(Go to Q62)
<8>	Refused	(Go to Q62)
<9>	Don't know	(Go to Q62)

Q62 Do you think that the Canada Pension Plan disability benefits should be changed in any way to better serve the needs of those who receive them?

<1>	Yes	(Go to Q63)
<2>	No	(Go to Q64)
<8>	Refused	(Go to Q64)
<9>	Don't know	(Go to Q64)

Q63 What changes would you suggest to improve Canada Pension Plan disability benefits? (Do not read list. Mark all that apply)

Raise level of payments	(Go to Q64)
Lower level of payments	(Go to Q64)
Cover costs of disability related supports and services	(Go to Q64)
Faster processing of applications	(Go to Q64)
Expand program to provide services	(Go to Q64)
More flexibility to re-enter work force gradually	(Go to Q64)
Other	(Go to Q64)
Refused	(Go to Q64)
Don't know	(Go to Q64)
	Lower level of payments Cover costs of disability related supports and services Faster processing of applications Expand program to provide services More flexibility to re-enter work force gradually Other Refused

Q64 The last few questions will try to get a sense of the different types of expenses that you face and the different sources of income that you have. Because of your disability or health condition, do you have any of the following expenses that are directly related to your disability? These should only include those expenses which you or your family pay directly. (Read list. Mark all that apply)

<01>	Attendant care or other personal services	(Go to C65)
< 02 >	Special transportation costs	(Go to C65)
<03>	Medication	(Go to C65)
<04>	Medical expenses such as orthotics	(Go to C65)
<05>	Higher rent, mortgage or other shelter costs	(Go to C65)
	Major debt for disability-related expenses, not including rent or mortgage	(Go to C65)
<07>	Special food or clothing costs	(Go to C65)
< 08 >	Other	(Go to C65)
<98>	Refused	(Go to C65)
<99>	Don't know	(Go to C65)

C65 If <1> is chosen in Q10 or <0> is chosen in Q13 go to Q68, else go to Q65.

Q65 For the year ending December 31, 1994, what would you estimate to be your total FAMILY income?

<\$000	),000>	(Go to Q66)
<8>	Refused	(Go to Q66)
<9>	Don't know	(Go to Q66)

69

Q66 How would you rate your current level of family income to meet the needs of you and your family? Would you say that your family income is...

<1>	More than adequate	(Go to Q67
<2>	Adequate enough	(Go to Q67
<3>	Less than adequate	(Go to Q67
< 8 >	Refused	(Go to Q67)
<9>	Don't know	(Go to Q67)

Q67 Thinking of your family income before you became disabled, how would you rate that level of income to meet the needs of you and your family? Would you say that your income was...

<1>	More than adequate	(Go to Q68)
<2>	Adequate enough	(Go to Q68)
<3>	Less than adequate	(Go to Q68)
<8>	Refused	(Go to Q68)
<9>	Don't know	(Go to Q68)

Q68 For the year ending December 31, 1994, what would you estimate to be your total PERSONAL income from all sources, including money from jobs, and Canada Pension Plan benefits?

<\$000	0,000>	(Go to Q69)
<8>	Refused	(Go to Q69)
<9>	Don't know	(Go to Q69)

Q69 Did you receive any lump sum payments during 1994, such as an insurance settlement, RRSP withdrawal, saving withdrawal, inheritance or family support?

<1>	Yes	(Go to Q70)
<2>	No	(Go to Q70)
< 8 >	Refused	(Go to Q70)
<9>	Don't know	(Go to Q70)

Q70 How would you rate your current level of personal income to meet your daily needs? Would you say that your income is...

More than adequate	(Go to Q71)
Adequate enough	(Go to Q71)
Less than adequate	(Go to Q71)
Refused	(Go to Q71)
Don't know	(Go to Q71)
	More than adequate Adequate enough Less than adequate Refused Don't know

Thinking of your personal income before you became disabled, how would you rate that level of income to meet your daily needs then? Would you say that your income was...

<1>	More than adequate	(Go to Q72)
<2>	Adequate enough	(Go to Q72)
<3>	Less than adequate	(Go to Q72)
<8>	Refused	(Go to Q72)
<9>	Don't know	(Go to Q72)

I am now going to read you a list. During the twelve months ending December 31, 1994, did you Q72 receive any income from the following sources excluding any lump sum payments? Please give your annual income from each source.

<01>	Canada Pension Plan disability benefit of	or combin	ned		
	combined disability/survivor benefit	<02>	Yes	How Much?	<\$000,000>
		<03>	No

Q73 Thinking of the period after you became disabled and before you began receiving Canada Pension Plan disability benefits, did you use any of the following sources of personal income to support you or your family? (Read list. Mark all that apply)

<1>	Social assistance/welfare	(Go to Q74)
<2>	Unemployment insurance	(Go to Q74)
<3>	Long term disability benefits (not Canada Pension Plan)	(Go to Q74)
<4>	Workers compensation	(Go to Q74)
<5>	Money from RRSP's	(Go to Q74)
<6>	Spousal income	(Go to Q74)
<7>	Other sources	(Go to Q74)
<8>	Refused	(Go to Q74)
<9>	Don't know	(Go to Q74)

Q74 Statistics Canada has signed an agreement with Human Resources Development Canada and is proposing to share the information which you provided in this survey with them. Human Resources Development plans to add the data from this survey to other files that they have, in order to assess the effectiveness of the CPP disability benefits plan. All information will be kept strictly confidential and will be used for research purposes only. Do you agree to share your information with Human Resources Development?

<1> Yes <2> No

END Thank the respondent

# **APPENDIX 1 - Specification of Derived Variables**

DVLICO	An indication whether the respondent lives above or below the Low Income Cut Off (Poverty Line) Questions used - Q08, Q09, Q13A, Q16, Q65, Q68	see below for explanation of derivation	
DVTENURE	To tell if the respondent owns or rents their dwelling. Questions used - Q11, Q12	1         Owner with mortgage           Q11=1 & Q12=1           2         Owner without mortgage           Q11=1 & Q12=2           3         Renter           Q11=2           9         Not specified           Q11=3,6,7,8,9 or Q11=1 &           Q12=6,7,8,9	
DVLIVING	To indicate if respondent is living in an institution, alone or with others in a household Questions used - Q10, Q13A	<ol> <li>Living in a institution Q10=1</li> <li>Living alone in household Q10=2 &amp; Q13=0</li> <li>Not living alone in a household Q10=2 and 1 ≤ Q13 ≤ 13</li> <li>Not specified 6 ≤ Q10 ≤ 9 or Q10=2 and 96 ≤ Q13 ≤ 99</li> </ol>	
DVRETWRK	Measures respondents' perception whether they would be able to return to work in the near future	1 Yes Q47=2  or  Q47=3 2 No Q47=1 9 Not specified $6 \le Q47 \le 9$	
DVSEVERE	Survey specific definition of severity of disability Questions used - Q18, Q18A, Q19, Q19A, Q20, Q20A, Q21, Q21A, Q22, Q22A, Q23, Q23A, Q24A, Q24B, Q25A, Q25B	1Mild2Moderate3Severe9Not specifiedSee below for derivation of variable	
DVINCSRC	Total of all individual sources of income reported Questions used - Q72 (all sub-questions)	Total income from all sources reported DVINCSRC = Q72b1 + Q72b2 + Q72b3 + Q72b4 + Q72b5 + Q72b6 + Q72b7 + Q72b8 + Q72b9 + Q72b10 Note: exclude all values between 999,996 and 999,999 inclusively	
DVTOTINC	Total reported income coming into the family	If Q65≠999,996 then DVTOTINC=Q65 If Q65=999,996 and Q68 < 999,996 then DVTOTINC=Q68 If Q65=999,996 and Q68 > 999,996 then DVTOTINC=DVINCSRC Else DVTOTINC=999,999 (Not Specified)	

### **Definition of Severity Scale**

To classify, we must first score the questions that relate to measuring severity.

### DVSEVERE

initialize score = 0

if Q18 = 1 then score = score + 1 if Q19 = 1 then score = score + 1 if Q20 = 1 then score = score + 1 if Q21 = 1 then score = score + 1 if Q22 = 1 then score = score + 1 if Q23 = 1 then score = score + 1 if Q18a = 1 then score = score + 1 if Q19a = 1 then score = score + 1 if Q20a = 1 then score = score + 1 if Q21a = 1 then score = score + 1 if Q22a = 1 then score = score + 1 if Q23a = 1 then score = score + 1 if Q24a = 1 then score = score + 1 if Q24b = 1 then score = score + 1 if Q25a = 1 then score = score + 1 if Q25b = 1 then score = score + 1

Total Maximum Score 16

DVSEVERE = 0 when score=0 DVSEVERE = 1 when 1 ≤ score ≤ 2 DVSEVERE = 2 when 3 ≤ score ≤ 5 DVSEVERE = 3 when score ≥ 6 DVSEVERE = 9 (not specified, conditions are shown below)

This derived variable must go through another check to identify cases that cannot be ascertained as to where they fit on the scale

Where score = 1	if one scored question $=$ 6,7,8 or 9 then leave DVSEVERE as is if two or more scored questions $=$ 6,7,8 or 9 then DVSEVERE $=$ 9
Where score $= 2$	if one or more scored questions = $6,7,8$ or 9 then DVSEVERE = $9$
Where score=3	if two or less scored questions = $6,7,8$ or 9 then leave DVSEVERE as is if three or more scored questions = $6,7,8$ or 9 then DVSEVERE = $9$
Where score=4	if one scored question= $6,7,8$ or 9 then leave DVSEVERE as is if 2 or more scored questions= $6,7,8$ or 9 then DVSEVERE=9
Where score $= 5$	if one or more scored questions = $6,7,8$ or 9 then DVSEVERE = $9$
Where score=6	if one or more scored question=6,7,8 or 9 then leave DVSEVERE as is

#### **Definition of DVLICO classification**

There are a couple steps to this derived variable. First, we must define sub-variables as follows:

 (I) Size of Family Respondent counts as member number 1 If Q13=0 famsize = 1 Each Q16 which equals any of 01 through 09 inclusively counts as an additional member
 Add total for number of family persons in household

Add total for number of family persons in household

- FAMSIZE 1 One member 2 Two members 3 Three members
  - 4 Four members
  - 5 Five members
  - 6 Six members
  - 7 Seven or more members
- (ii) Urban/Rural Rural when Q08 = 2 Urban when Q08 = 1 Not specified when Q08 = 7, 8 or 9
  - UR 1 Urban 2 Rural 9 Not specified

(iii) Urban Population Use Q09 & Q08 to define

USIZE 1	Q09 =	1 & Q08 = 1
	2	Q09 = 2 & Q08 = 1
	3	Q09 = 3 & Q08 = 1
	4	Q09 = 4 & Q08 = 1
	5	Q09 = 6 & Q08 = 2
	9	Q09 = 6, 7, 8  or  9 & Q08 = 7, 8,  or  9

(iv) Family Income If Q13 = 0, use Q68 to define family income If  $1 \le Q13 \le 13$  use Q65 to define family income

> FAMY Q13 = 0 then FAMY = Q68 If  $1 \le Q13 \le 13$  then FAMY = Q65

#### **Derived Variable Definition**

DVLICO	1	Respondent lives in a low income family
	2	Respondent does not live in a low income family
	9	Not enough information provided to calculate (Not specified)

Note: family is defined as an economic family, where a group of individuals related by blood, marriage or adoption share a common dwelling unit at the time of the survey.

# **Derived Variable Calculation**

9 = FOR ANY SUB VARIABLES THAT HAVE LAST DIGIT VALUES OF 6 TO 9 (ie. 6, 96, 996...9, 99, 999)

$1 = FAMSIZE(1) \times UR(1) \times USIZE(1) \times FAMY < 16511$
