Troisième édition

1981-1986

## Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Population Estimates Section,  
Demography Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-2320)  
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(983-4020)

## Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingué et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des estimations démographiques,  
Division de la démographie,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-2320) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Winnipeg	(983-4020)

## Cover

The stylized representation of Da Vinci's famous symbol for humanity, a man and a woman overlooking Canada and the world, captures the essence of population studies.

This publication was prepared by:

- **Pierre Parent**, responsible for national, provincial and territorial population estimates

With the collaboration of:

- **Robert Riordan** from the Research and Analysis Section and all other members of the Population Estimates Section

Under the direction of:

- **R. Raby**, Chief, Population Estimates Section

## Couverture

Dominant le Canada et le globe, un homme et une femme, stylisés dans la représentation graphique de l'humanité du célèbre De Vinci, nous ramènent à l'essence même de l'étude des populations.

Cette publication a été réalisée par:

- **Pierre Parent**, responsable des estimations démographiques au niveau national, provincial et territorial

Avec la collaboration de:

- **Robert Riordan** de la Section des recherches et d'analyse ainsi que le personnel de la Section des estimations démographiques

Sous la direction de:

- **R. Raby**, Chef de la section des estimations démographiques

## Highlights

- The ageing of Canada's population continues. The process began some 25 years ago, and is evidenced by the fact that the proportion of persons aged 65 years and over reached a new peak in 1986 (10.7 percent compared to 9.7 percent in 1981). Prince Edward Island and Saskatchewan have the highest proportion of their population in the aged category (12.7 percent), while Alberta has the lowest (8.1 percent). The Yukon and Northwest Territories, with much younger populations than those found in the provinces, have only 3.7 percent and 2.8 percent of their populations, respectively, in the 65 and over category.
- For the fifth consecutive 5-year period, the proportion of children (those aged 0-17) in the Canadian population declined. Between 1981 and 1986, their proportionate share declined from 28.1 to 25.9 percent. The province with the largest proportion of children in its population was Newfoundland, at 32.1 percent; and that with the smallest was Quebec, at 24.8 percent. Children once again constituted an important part of the population of the Territories, with the 0-17 age group accounting for 30.2 percent of the 1986 population of the Yukon, and 38.8 percent of that of the Northwest Territories.
- In Canada overall, one person in two was at least 31.6 years old, whereas in 1981, the median age was only 29.6 years. According to the 1986 Census, Newfoundland had the most youthful population - with a median age of 27.9 years - whereas British Columbia had the oldest population - with a median age of 33.1 years. In the Northwest Territories, however, the median age was only 23.7 years - four full years lower than that in Newfoundland.
- In 1986, the sex ratio in Canada as a whole was 97.4 males per 100 females. Alberta and Newfoundland were the only provinces with more males than females, with sex ratios of 101.6 and 100.1, respectively. In total contrast, the only provinces with more females than males in 1971 were Ontario and Quebec, each having had ratios in the area of 98. Here again the Territories stand out. In 1986, both had sex ratios indicating a very high preponderance of males per females - in the area of 110 per 100.

## Faits saillants

- Le vieillissement de la population du Canada, auquel on assiste depuis plus de 25 ans, se poursuit alors que la proportion des personnes âgées de 65 ans et plus a atteint un nouveau sommet en 1986, soit 10.7%, comparativement à 9.7% en 1981. L'Île-du-Prince-Édouard et la Saskatchewan sont les provinces où on compte proportionnellement le plus de personnes âgées, soit 12.7% de la population totale; l'Alberta est la province où leur poids démographique est le plus faible (8.1%). Les territoires, à ce chapitre, présentent une population encore beaucoup plus jeune que les provinces, ne se composant d'aînés qu'à 3.7% (Yukon) et 2.8% (Territoires du Nord-Ouest).
- Le pourcentage d'enfants (0-17 ans) a encore régressé entre 1981 et 1986, pour un cinquième lustre consécutif, passant de 28.1% à 25.9% pour l'ensemble du pays. Terre-Neuve est la province où ce pourcentage est le plus important (32.1%), tandis qu'il est le plus faible au Québec (24.8%). Dans les territoires, les enfants constituent encore une part importante de la population, soit 30.2% au Yukon et 38.8% dans les Territoires du Nord-Ouest.
- Une personne sur deux avait au moins 31.6 ans au Canada en 1986, alors qu'en 1981, l'âge médian n'était que de 29.6 ans. Terre-Neuve était également la province la plus jeune à cet égard au dernier recensement (27.9 ans), la Colombie-Britannique étant la plus vieille (33.1 ans). Dans les Territoires du Nord-Ouest, cependant, cet indice ne vaut que 23.7 ans, soit quatre ans de moins qu'à Terre-Neuve.
- Au Canada, pour l'ensemble de la population en 1986, on comptait 97.4 hommes pour 100 femmes (rapport de masculinité). L'Alberta et Terre-Neuve sont les seules provinces où la population masculine était plus nombreuse que la population féminine (respectivement 101.6 et 100.1 hommes pour 100 femmes). Comparativement, en 1971, seuls le Québec et l'Ontario connaissaient un indice inférieur à 100 (près de 98 hommes pour 100 femmes dans les deux cas). Ici aussi les territoires se distinguent, affichant tous deux un rapport de masculinité d'environ 110.

## Introduction

Since 1982, Statistics Canada publishes, in Catalogue No. 91-210 postcensal annual estimates of population on June 1 by sex and age. These estimates are obtained by the component method: to Census counts adjusted to June 1, we add or subtract demographic events, registered (births, deaths and immigration) or estimated (interprovincial migration and emigration) occurring between the last census and the reference period of the estimate of population. When the results of the next census are published, our postcensal estimates are adjusted to make them compatible with the two adjacent censuses. This is how we obtain our intercensal estimates.

This report includes in its first part:

- 1) An analysis of the demographic evolution between 1981 and 1986 consisting of Highlights and a Summary Analysis.
- 2) A technical section combining a glossary of demographic terms used in this publication, a reference to data sources and methodology as well as an evaluation of the quality of these estimates.

The second part contains intercensal estimates by sex and age at June 1 for years 1981 to 1986 and some common demographic indices such as dependency ratios and sex ratios. Data for years 1981 and 1986 are in fact June 3rd Census counts adjusted to June 1.

We wish to point out that Statistics Canada has published intercensal estimates by individual years of age since 1971; formerly, they were disseminated only by quinary age groups. However, users requiring estimates by sex and individual years of age for the 1921-1970 period may obtain them, by contacting the Population Estimates Section, Demography Division of Statistics Canada.

Depuis 1982, les estimations postcensitaires annuelles de la population du 1er juin selon le sexe et l'âge, paraissent dans la publication annuelle n° 91-210 au catalogue. Ces estimations sont obtenues par la méthode des composantes: aux effectifs de la population fournis par le recensement et ajustés au 1er juin, on ajoute ou retranche les événements démographiques enregistrés (naissances, décès et immigration) ou estimés (migration interprovinciale et émigration) survenus entre le dernier recensement et la date de référence de l'estimation. Quand paraissent les résultats du recensement suivant, on corrige les estimations postcensitaires afin qu'elles soient compatibles avec les deux recensements qui les encadrent. On obtient ainsi les estimations intercensitaires.

La première partie de ce rapport inclut:

- 1) Une analyse de l'évolution démographique entre 1981 et 1986, comprenant les faits saillants et une analyse sommaire.
- 2) Une partie technique regroupant un court lexique des termes particuliers utilisés dans cette publication, une référence aux sources de données et à la méthodologie, ainsi qu'une évaluation de la qualité des présentes estimations.

La seconde partie de cet ouvrage contient les estimations intercensitaires selon le sexe et l'année d'âge au 1er juin des années 1981 à 1986 et quelques indices démographiques usuels, tel que les rapports de dépendance et de masculinité.

Mentionnons enfin que Statistique Canada publie des estimations intercensitaires selon l'année d'âge depuis 1971. Pour la période de 1921 à 1970, on n'a diffusé que les estimations par groupe quinquennal d'âges; cependant, il est possible d'obtenir ces dernières estimations par année d'âge en s'adressant à la Section des estimations démographiques, Division de la démographie de Statistique Canada.

## A Few Definitions

### **Ageing (of a Population)**

An increase in the number of old persons as a percentage of the total population.

### **Birth Cohort or Generation**

Unless otherwise specified, refers here to a group of persons born within the 12 month period between June 1 of a given year and May 31 of the following year.

### **Census Year**

The census year refers to the period beginning June 1 of a given year and ending May 31 of the following year.

### **Cohort**

Represents a group of persons who have experienced a specific demographic event during a determined year. Thus, the married cohort of 1983 is simply the number of persons who married in 1983. Persons born within a specified year could be referred to as a generation.

### **Component**

Any of the classes of events generating population movement variations. Births, deaths, migration, marriages, divorces and new widowhoods are the components responsible for the change in total population or of the age, sex and marital status distribution of the population.

### **Dependency Ratio**

The total population is customarily divided up into three broad age groups: children (ages 0-17), adults (ages 18-64) and aged persons (ages 65 and over). The following ratios may be defined on the basis of this classification:

- (a) child dependency ratio, i.e., the number of children per adult;
- (b) age dependency ratio, i.e., the number of aged persons per adult;
- (c) total dependency ratio, i.e., the sum of the child and the aged dependency ratios.

A fourth ratio, the aged-to-child ratio, is sometimes used. It represents the number of aged persons per child.

The same ratios are sometimes defined on the basis of the following categories: children (ages 0-19), adults (ages 20-64), and aged persons (ages 65 and over) or 0-14, and 15-64.

### **Error of Closure**

Difference between the population according to a census and the postcensal estimate for the same date.

## Quelques définitions

### **Vieillissement démographique**

Évolution caractérisée par une augmentation de la proportion des personnes âgées au sein d'une population.

### **Génération**

Désigne ici, sauf indication contraire, l'ensemble des personnes nées durant la période de 12 mois comprise entre le 1<sup>er</sup> juin d'une année et le 31 mai de l'année suivante.

### **Année censitaire**

Période qui s'étend du 1<sup>er</sup> juin d'une année au 31 mai de l'année suivante.

### **Cohorte**

Ensemble des personnes touchées par un phénomène démographique particulier, une année donnée. La cohorte des mariés de 1983 désigne donc l'ensemble des personnes qui se sont mariées en 1983. La cohorte, dans le cas des naissances, porte le nom de génération.

### **Composante**

Chacune des classes d'événements générateurs des mouvements ou variations de population. Ainsi les naissances, décès, migrations, mariages, divorces et entrées en veuvage sont des composantes, car elles altèrent soit l'effectif de la population totale, soit sa composition selon l'âge, le sexe et l'état matrimonial.

### **Rapport de dépendance**

On a coutume de répartir la population en trois grands groupes d'âges: 0-17 ans (enfants), 18-64 ans (adultes) et 65 ans et plus (personnes âgées), ce qui permet le calcul des rapports suivants:

- (a) le rapport de dépendance des enfants, égal au nombre d'enfants par adulte;
- (b) le rapport de dépendance des personnes âgées qui représente le nombre de personnes âgées par adulte;
- (c) le rapport global de dépendance qui est la somme des rapports de dépendance des enfants et des personnes âgées.

Une autre mesure, le rapport personnes âgées-enfants, est parfois utilisée; elle renseigne sur le nombre de personnes âgées par enfant.

Les mêmes calculs sont parfois effectués en retenant les catégories suivantes: 0-19 ans (enfants), 20-64 ans (adultes) et 65 ans et plus (personnes âgées) ou 0-14 et 15-64.

### **Erreur en fin de période**

Déférence entre la population donnée par un recensement et l'estimation postcensitaire à la date du recensement.

### **International Migration**

Movement of population between Canada and a foreign country which involves a permanent change in residence. A distinction is made between **immigrants** from other countries who settle in Canada and **emigrants** who leave Canada.

### **Interprovincial Migration**

Movements from one province to another involving a permanent change in residence. A person who takes up residence in another province is an **out-migrant** with reference to his province of origin, and an **in-migrant** with reference to his province of destination.

### **Masculinity Ratio**

The ratio of the number of men to the number of women. This is not to be confused with the sex ratio at birth, which is the ratio of the number of live boys born to the number of live girls born. This ratio is usually expressed as an index, with the number of women taken to be a base of 100.

### **Median Age**

An age  $x$ , such that exactly one half of the population is older than  $x$  and the other half is younger than  $x$ .

### **Natural Increase**

Excess of births over deaths.

### **Number of Complete Years Lived**

Age at last birthday.

### **Population**

"Estimated population" and "population according to the census" are both defined as being "the total number of persons whose usual place of residence... was somewhere in Canada, including Canadian government employees stationed abroad and their families, members of Canadian Armed Forces stationed abroad and their families, and crews of Canadian merchant vessels. Not included are government representatives of other countries and their families, attached to the legation, embassy, or other diplomatic body of that country, members of the Armed Forces of other countries stationed in Canada and members of their families who are not citizens of Canada, students attending school in Canada whose usual residence is outside Canada, and residents of another country visiting Canada temporarily. **Dictionary of the 1971 Census Terms**, Catalogue No. 12-540, p. 28.

### **Population Estimate**

(a) Preliminary, Updated and Final Postcensal  
Population estimate produced by using data from the most recent census and estimates of the components of demographic change since that last census.

### **Migration internationale**

Ensemble des déplacements entre le Canada et l'étranger accompagnés d'un changement permanent de résidence. On distingue à cet égard les **immigrants**, qui viennent s'établir au Canada et les **émigrants**, qui quittent le Canada.

### **Migration interprovinciale**

Ensemble des déplacements, d'une province vers une autre, accompagnés d'un changement permanent de résidence. Un individu qui effectue un tel déplacement sera un **soriant** pour sa province d'origine et un **entrant** pour sa province de destination.

### **Rapport de masculinité**

Rapport de l'effectif du sexe masculin à l'effectif du sexe féminin. Le rapport de masculinité à la naissance désigne le rapport des naissances masculines aux naissances féminines. On exprime généralement ce rapport comme un indice, l'effectif du sexe féminin de base étant 100.

### **Âge médian**

Âge  $x$  tel qu'il divise une population en deux groupes d'effectifs égaux, l'un composé uniquement des individus d'âge supérieur à  $x$ , l'autre des individus d'âge inférieur à  $x$ .

### **Accroissement naturel**

Excédent des naissances sur les décès.

### **Âge en années révolues**

Âge au dernier anniversaire.

### **Population**

La population estimée répond à la même définition que celle dénombrée lors du recensement. Il s'agit donc du "nombre total de personnes dont le lieu de résidence habituelle... était quelque part au Canada, y compris les employés du gouvernement canadien postés à l'étranger et leur famille, les membres des Forces armées canadiennes stationnés à l'étranger et leur famille et les équipages des navires marchands canadiens. Ne sont pas compris les représentants officiels des autres pays et leur famille, attachés à la légation, à l'ambassade ou à un autre organisme diplomatique de ces pays, les membres de Forces armées étrangères stationnés au Canada et les membres de leur famille qui ne sont pas citoyens du Canada, les étudiants qui fréquentent l'école au Canada mais dont la résidence habituelle est en dehors du Canada et les résidents d'autres pays en visite temporaire au Canada". **Dictionnaire des termes du recensement de 1971**, no 12-540 au catalogue, p. 22.

### **Estimation de la population**

(a) Postcensitaire provisoire, mise à jour et définitive  
Estimation de l'effectif de la population obtenue en utilisant les résultats du dernier recensement disponible et l'estimation de l'accroissement démographique survenu depuis la date de ce dernier recensement.

**(b) Intercensal**

Population estimate derived by using final postcensal estimates and data from the censuses preceding and following the year in question.

**Population Growth**

Change in population size from one date to another.

**Undercoverage Rate**

The ratio expressed as a percentage of the estimated number of persons not enumerated in the census (who were intended to have been enumerated) to the total number that should have been enumerated in the census.

**Methodology and Data Sources**

Intercensal estimates were produced using the final postcensal estimates from 1982 to 1986 as well as 1981 and 1986 Census counts. For more detailed information regarding sources of data and population estimation methods, see publication "Population Estimation Methods, Canada" catalogue No. 91-528E.

**Summary Analysis**

The age and sex structure of Canada's population changed between the 1981 and 1986 Censuses. In brief, we present the most salient of these changes.

**Age Structure**

The age pyramid in Chart I illustrates the evolution of Canada's age distribution between 1981 and 1986. The ageing of the population, which began more than 25 years ago, continues. At the base of the pyramid, the proportion of the total population accounted for by youths (0-17 years) declined from 28.1% in 1981, to 25.9% in 1986. The vertex of the pyramid - that part corresponding to persons aged 65 years and over - increased to 10.6% in 1986, from 9.7% in 1981. In 1986, adults (those aged 18-64 years) represented 63.4% of the population, slightly more than the 62.2% share they held in 1981.

The trends observed at the national level are maintained at the provincial level. In the Maritimes, young people constituted 28.4% of the total population in 1986, compared with 31.9% in 1981. The aged accounted for 10.9% in 1986, compared with 9.9% in 1981, whereas the adult population went from 58.1% to 60.7% during the course of the 1981-1986 period. This translated into a decrease of 9.1% of the number of youths, whereas for adults and senior citizens, it meant increases of 6.4% and 12.1%, respectively.

**(b) Intercensitaire**

Estimation de l'effectif de la population, obtenue en utilisant les estimations postcensitaires définitives et les résultats des deux recensements encadrant l'année considérée.

**Accroissement démographique**

Variation de l'effectif de la population entre deux dates.

**Taux de sous-dénombrement**

Rapport, exprimé en pourcentage, du nombre estimé de personnes qui n'ont pas été recensées (mais étaient visées par le recensement) à celui de l'ensemble des personnes visées par le recensement.

**Méthodologie et sources des données**

Pour établir les estimations intercensitaires, on utilise les estimations postcensitaires définitives de 1982 à 1986 ainsi que les recensements de 1981 et 1986. Pour une information plus détaillée concernant les sources de données et les méthodes d'estimation des populations le lecteur peut consulter la publication "Méthodes d'estimation de la population, Canada", n° 91-528F au catalogue.

**Analyse sommaire**

La structure par âge et par sexe de la population canadienne s'est modifiée entre les recensements de 1981 et 1986. Nous présentons brièvement ci-dessous les principaux changements.

**La structure par âge**

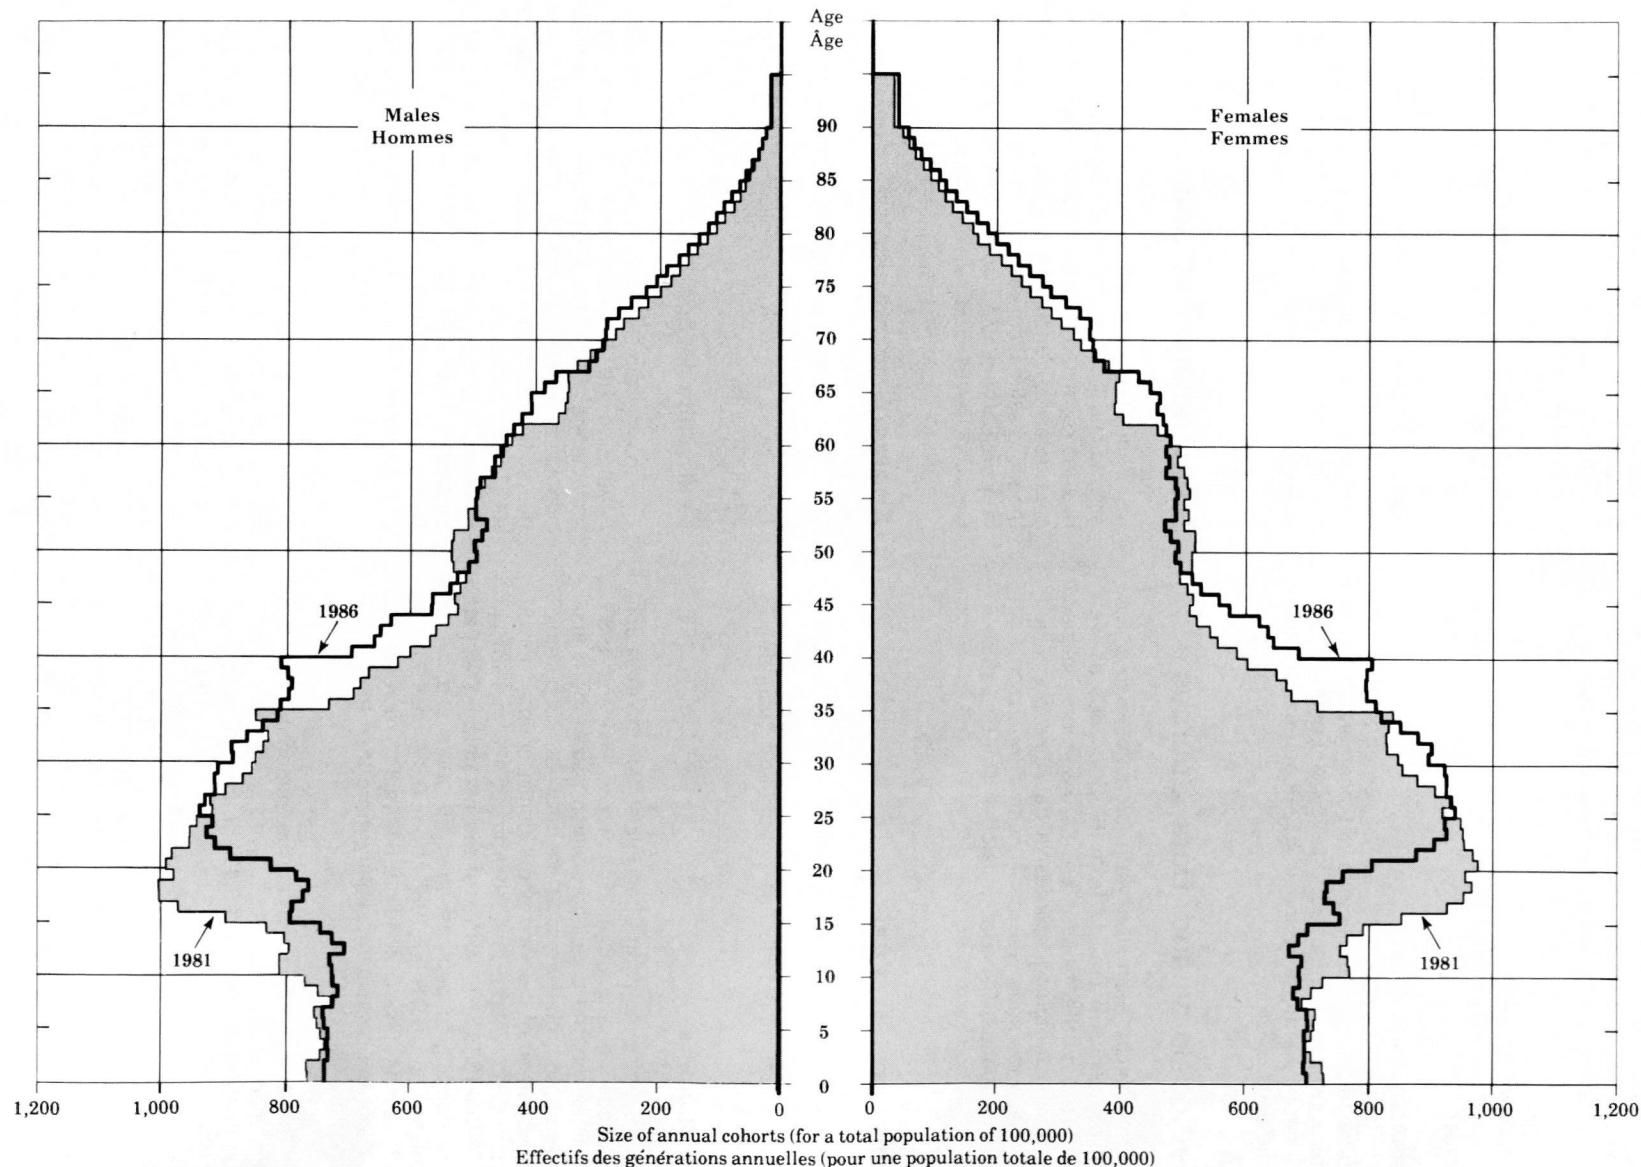

Les pyramides des âges du graphique I illustrent l'évolution de la répartition par âge de la population canadienne entre 1981 et 1986. Le vieillissement de la population auquel on assiste depuis plus de 25 années se poursuit. À la base de la pyramide, la proportion des jeunes (0-17 ans) passe de 28.1% en 1981 à 25.9% en 1986. Au sommet, la part relative des personnes âgées (65 ans et plus) se situe à 10.6% en 1986, comparativement à 9.7% en 1981. Quant aux adultes (18-64 ans), ils représentaient 63.4% de la population en 1986, soit un peu plus qu'en 1981 (62.2%).

Les tendances observées au niveau national se maintiennent à l'échelle provinciale. Dans les maritimes, les jeunes constituent, en 1986, 28.4% de l'ensemble des individus, contre 31.9% en 1981. Par ailleurs, le poids relatif des personnes âgées atteint 10.9% en 1986 comparativement à 9.9% en 1981. Quant à la population adulte, elle passe de 58.1% à 60.7% au cours de cette période. Cela se traduit par une diminution de 9.1% du nombre de jeunes, alors que chez les adultes et les personnes âgées, on observe une augmentation respective de 6.4% et de 12.1%.

**Age Pyramid of the Population of Canada, June 1, 1981 and 1986**  
**Pyramide des âges de la population du Canada, 1<sup>er</sup> juin 1981 et 1986**

Source: Tables 1 and 6 in this publication.

Source: Tableaux 1 et 6 de cette publication.

The fastest declining youth population in the country was that of Newfoundland. From 36.5% in 1981, the proportion of Newfoundland's population accounted for by the 0-17 age group had declined to 32.1% by 1986. In contrast, those aged 65 and over increased their proportionate share of the population from 7.7% in 1981, to 8.8% in 1986. In terms of growth, there was a decline of 12.0% in the number of youths and an increase of 13.9% in the number of elderly in Newfoundland. Even so, Newfoundland, among all provinces, possesses the highest proportion of youths and one of the lowest proportion of seniors.

Considering the four western provinces together, youths constituted 28.4% of the total population in 1981, whereas the elderly accounted for 10.0%. By 1986, the 0-17 group was reduced to a 27.0% proportionate share, while the 65 and over group had grown slightly to 11.0%. This represents a 5-year increase of 15% of the number of elderly, but almost no increase among the youth population. As a result of an increase in real number of 6.2%, the adult population (those aged 18-64), went from a 61.6% proportionate share in 1981, to a 62.1% share in 1986.

In Quebec, as in Ontario, the proportion of 0-17 year olds diminished while that of the 65 years and over group increased slightly. In 1986, young Quebecers and Ontarians represented 24.8% and 25.1% of the population, respectively - in 1981, these same percentages were 27.3% and 27.4%. The 65 years and over group made up 8.8% of the population of Quebec in 1981, compared to 10.0% in 1986. In Ontario, the proportionate values were 10.1% in 1981 and 10.9% in 1986. Adults had a slightly higher proportionate share of the population in Quebec in both 1981 and 1986. In 1981, 63.8% of the total population was between the ages of 18 and 64, whereas only 62.5% of Ontario's population fell into this group. In 1986, the figures were 65.2 and 64.0%, respectively.

Generally, the Territories had a younger age structure in 1986 than did the provinces. The proportion of youths in the Yukon and Northwest Territories was 30.2% and 38.8%, respectively, while that of seniors represented only 3.7% and 2.8% of the total population. These values for the elderly population are two to three times less than those in any of the provinces.

Over the past several years, variation in the median age of the population provided a glimpse of the ageing process. In 1986, the median age of Canada's population was 31.6 years - two years older than the value of 29.6 years observed in 1981. At the provincial level, Newfoundland provided the lowest median age (27.9 years), and British Columbia, the highest (33.1 years) producing a range between the two extremes of 5.2 years. In the Territories, the median age was very low - 28.9 years in the Yukon and only 23.7 years in the Northwest Territories. In 1981, Newfoundland again had the lowest median age (25.2 years), and British Columbia, the highest (30.9 years). The range in this case was 5.7 years between the extremes.

C'est à Terre-Neuve que la part des jeunes a le plus diminué. De 36.5% en 1981, les 0-17 ans ne représentent plus que 32.1% de la population en 1986. Quant aux 65 ans et plus, leur poids relatif était de 8.8% en 1986, légèrement plus élevé qu'en 1981 (7.7%). En termes d'effectifs, on enregistre une diminution de 12.0% du nombre de jeunes et une hausse de 13.9% des personnes âgées. En dépit de ces changements, c'est toujours dans cette province que la part des jeunes est la plus importante et celle des personnes âgées parmi les plus faibles au Canada.

Dans les provinces à l'ouest de l'Ontario, en 1981, la proportion de jeunes était de 28.4%, tandis que celle des personnes âgées se situait à 10.0%. En 1986, la part des 0-17 ans s'amenuise (27.0%), alors que celle des 65 ans et plus s'accroît (11.0%). Cela représente une hausse de 15% de l'effectif des personnes âgées au cours de cette période quinquennale, mais une croissance presque nulle chez les jeunes. En ce qui a trait aux adultes, ils ont accru leur part relative de 61.6% (1981) à 62.1% (1986), résultat d'une augmentation de 6.2% du nombre d'individus.

Au Québec, tout comme en Ontario, la proportion des 0-17 ans a sensiblement diminué et celle des 65 ans et plus, légèrement augmenté. En 1986, les jeunes Québécois et Ontariens représentaient 24.8% et 25.1% de leur population respective, alors que ces mêmes pourcentages étaient de 27.3% et 27.4% en 1981. Les 65 ans et plus formaient 8.8% de la population québécoise en 1981, comparativement à 10.0% en 1986. En Ontario, ces mêmes rapports étaient de 10.1% (1981) et de 10.9% (1986). Quant aux adultes, ils étaient proportionnellement plus nombreux au Québec (1981; 63.8%, 1986; 65.2%) qu'en Ontario (1981; 62.5%, 1986; 64.0%).

De façon générale, les territoires présentent une structure par âge plus jeune que les provinces. Au Yukon et dans les Territoires du Nord-Ouest, les proportions de jeunes sont de 30.2% et 38.8% respectivement, tandis que les personnes âgées ne représentent que 3.7% et 2.8% de la population totale, une part de deux à trois fois moindre que n'importe laquelle des provinces.

La variation de l'âge médian au fil des années donne également un aperçu du vieillissement d'une population. En 1986, l'âge médian de la population canadienne était de 31.6 ans, soit deux années de plus qu'en 1981 (29.6 ans). À l'échelle des provinces, Terre-Neuve a l'indice le plus faible (27.9 ans), la Colombie-Britannique le plus élevé (33.1 ans). L'écart entre les deux provinces extrêmes est de 5.2 années. Dans les territoires, l'âge médian est très faible, soit 28.9 ans au Yukon et seulement 23.7 ans aux Territoires du Nord-Ouest. En 1981, Terre-Neuve était toujours la province dont l'âge médian était le plus bas (25.2 ans), alors que la Colombie-Britannique se situait également au dernier rang (30.9 ans). Cela représente une différence de 5.7 ans entre ces deux indices.

## Sex Ratio by Age

The disparity between males and females at various ages is evident in Chart II, where the sex ratios by age from the 1981 and 1986 Censuses are provided.

In 1986, there were, overall, 97.4 males per 100 females. This is compared with 98.3 in 1981, and 102.2 in 1961. The sex ratio for 0-4 year olds was 105.1 in 1986. For those aged 65-74 years, it was 81.1, whereas it was 60.4 for the 75 years and over group. In 1981, the comparable figures were 105.2 at 0-4 years, 83.4 among those aged 65-74 years, and 62.3 for those 75 years and over.

At the provincial level, in 1986, the sex ratio for all ages in Alberta was 101.6, whereas in Newfoundland, it was 100.1. In 1981, in addition to these two provinces, Saskatchewan also had a sex ratio above 100. In comparison, with the exception of Quebec and Ontario, all 1971 provincial sex ratios exceeded 100.

## Quality of Estimates

The population figures published here for years other than census years are estimates and, as such, are subject to certain errors.

The intercensal estimates which are based on the results of the 1981 and 1986 Censuses are subject to the error of closure. Text Table I gives some indication of the magnitude of this error at the national level. The error of closure is mainly attributable to two sources:

- (a) Differences in the amount of undercoverage from one census to the next and by age: for a given cohort group, the number of persons not enumerated in the 1981 and 1986 Censuses generally differs. Thus, even assuming that the components of population change could be exactly estimated, an error of closure would still be present.<sup>1</sup> Text Table II shows estimates of undercoverage for Canada (excluding the Yukon and the Northwest Territories) by sex and selected age groups in the 1981 and 1986 Censuses.

<sup>1</sup> Consider the following example for Canada, excluding the Yukon and Northwest Territories: on June 3, 1981, 3.12% of the men aged 15-19, or approximately 32,000 individuals, were not enumerated. On June 3, 1986, 10.71% of the men from the same group of cohorts (who were, therefore, in the age group 20-24 at the time) and present in Canada, or approximately 136,000 individuals, were not enumerated. Therefore, even if the estimates of the components of population change were exactly correct, there would still be a difference of  $104,000 \pm 19,000$  at the 95% confidence interval between the postcensal estimate and the actual census count. In point of fact, an error of closure of this very size was observed in the case of men aged 20-24 on June 1, 1986. This is an example of a case in which the differences in the amount of undercoverage from one census to the next was responsible for a good part of the error of closure.

## La masculinité selon l'âge

L'inégalité des effectifs masculins et féminins aux divers âges apparaît au graphique II. On y reproduit le rapport de masculinité selon l'âge des individus aux recensements de 1981 et 1986.

Il y avait, en 1986, 97.4 hommes pour 100 femmes tous âges, comparativement à 98.3 en 1981 et 102.2 en 1961. En 1986, de 105.1 qu'il est chez les 0-4 ans, le rapport de masculinité n'est plus que de 81.1 chez les 65-74 ans et de 60.4 chez les 75 ans et plus. Ces mêmes rapports se situaient, en 1981, à 105.2 (0-4 ans), 83.4 (65-74 ans) et 62.3 (75 ans et plus).

Au niveau des provinces, on note qu'en 1986, le rapport de masculinité tous âges en Alberta était de 101.6, alors qu'à Terre-Neuve, cet indice valait 100.1. En 1981, en plus de ces deux provinces, la Saskatchewan avait également un rapport de masculinité supérieur à 100. À titre de comparaison, en 1971, tous les rapports de masculinité provinciaux étaient supérieurs à 100, sauf au Québec et en Ontario.

## Qualité des estimations

Pour les années où l'on ne dispose pas d'un recensement, les effectifs de population publiés ici sont des estimations et comportent une certaine marge d'erreur.

Ainsi, dans le cas des estimations intercensitaires, qui tiennent compte des résultats des recensements de 1981 et de 1986, se pose le problème de l'erreur en fin de période; le tableau explicatif I donne une idée de son importance au niveau du Canada. Cette erreur est surtout attribuable à deux sources:

- a) Le sous-dénombrement différentiel, d'un recensement à l'autre et selon l'âge: en effet, pour un même groupe de générations, le nombre de personnes non recensées n'est en général pas le même le 1<sup>er</sup> juin 1981 et le 1<sup>er</sup> juin 1986. Donc, à supposer que l'on puisse estimer parfaitement les composantes de l'accroissement démographique, il subsisterait tout de même une erreur en fin de période intercensitaire<sup>1</sup>. Le tableau explicatif II fournit l'estimation du sous-dénombrement selon le sexe et certains groupes d'âges lors des recensements de 1981 et de 1986, au niveau du Canada (excluant le Yukon et les Territoires du Nord-Ouest).

<sup>1</sup> Illustrons cela par un exemple concernant le Canada (sans le Yukon et les Territoires du Nord-Ouest): le 3 juin 1981, 3.12% des hommes de 15-19 ans, soit environ 32,000 individus, n'ont pas été recensés. Le 3 juin 1986, 10.71% des hommes issus du même groupe de générations (donc âgés de 20-24 ans à cette date) et présents au Canada n'ont pas été dénombrés, soit environ 136,000 individus. Donc, même si l'estimation des composantes ne comportait aucune erreur, il subsisterait une différence de  $104,000 \pm 19,000$  selon l'intervalle de confiance à 95% entre l'estimation postcensitaire et le recensement. Or, c'est justement une erreur en fin de période approchant cette valeur que l'on a observée chez les hommes de 20-24 ans le 1<sup>er</sup> juin 1986. Dans ce cas-ci, le sous-dénombrement différentiel est responsable d'une importante partie de l'erreur en fin de période intercensitaire.

Chart - II

**Sex Ratio by Age, Canada, June 1, 1981 and 1986****Rapport de masculinité selon l'âge, Canada, 1<sup>er</sup> juin, 1981 et 1986**Number of males per 100 females  
Nombre d'hommes pour 100 femmesYear of birth (June 1 - May 31)  
Année de naissance (1<sup>er</sup> juin - 31 mai)

Source : Statistics Canada, June 3, 1981 and 1986 adjusted to June 1 Censuses of Canada.  
Source : Statistique Canada, recensements du Canada du 3 juin 1981 et 1986, ajustés au 1<sup>er</sup> juin.

(b) Errors in the estimates of the components of population change; these errors may vary in magnitude according to the age, sex and province concerned. It should be pointed out that the errors in the estimates of certain components such as births or emigration may affect some age groups more than others.

Finally, it should be noted that the disparity between the actual census count and the postcensal estimate for the same date (see Text Table I) is a reflection neither of the quality of the census nor that of the estimates and the reader must bear in mind that these errors are cumulated over a five-year period.

b) L'erreur provenant de l'estimation des composantes et dont l'importance peut varier suivant le sexe, l'âge ou la province. Mentionnons notamment que des erreurs portant sur certaines composantes (naissances ou émigration, par exemple) peuvent affecter davantage certains groupes d'âges.

Soulignons enfin que l'écart constaté entre l'effectif recensé et l'estimation postcensitaire à la même date (tableau explicatif I) ne constitue pas plus une mesure de la qualité du recensement que de celle des estimations et il faut se souvenir qu'il s'agit d'une erreur cumulée sur une période de cinq ans.

**TEXT TABLE I. Error of Closure of the Estimates of Population by Sex and Age Group, Canada, June 1, 1986**

**TABLEAU EXPLICATIF I. Erreur en fin de période des estimations de la population selon le sexe et le groupe d'âges, Canada, 1<sup>er</sup> juin 1986**

# BIRTH, DEATH, MARRIAGE, DIVORCE

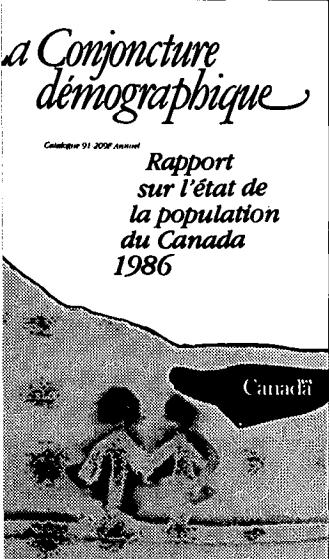

Factors like these are explored in the **Report on the Demographic Situation In Canada, 1986**.

Using the latest demographic data, this report updates its well received predecessor. It is a dynamic portrait of Canada and her people, and provides special analytical sections on subjects like:

- language
- fertility and childbearing
- causes of mortality
- interprovincial migration

For the best insight into Canada's demographic scene, choose the **Report on the Demographic Situation In Canada, 1986**.

Catalogue 91-209E  
\$15.00 in Canada,  
\$16.50 other countries,  
138 pages.

# NAISSANCES, DÉCÈS, MARIAGES, DIVORCES...

Des événements tels que ceux-ci font l'objet du **Rapport sur la situation démographique au Canada, 1986**.

Réalisé à partir des plus récentes données démographiques disponibles, ce rapport constitue une version à jour de la publication originale, qui avait été très bien accueillie. Il présente un portrait dynamique du Canada et de sa population et contient des analyses sur des sujets comme:

- la langue;
- la fécondité et la maternité;
- les causes de mortalité;
- la migration interprovinciale.

Afin de mieux saisir la réalité démographique canadienne, procurez-vous le **Rapport sur la situation démographique au Canada, 1986**

# BABY-BOOM TO BABY-BUST

# CROISSANCE ET DÉCLIN DE LA FÉCONDITÉ

## A GENERAL IN JEOPA-

DATE DUE

With an all-time low average of 1.7 births per woman, there is no assurance we can replace the present population. Many Canadians are foregoing parenthood.

Covering a number of issues on the subject, **Fertility in Canada: From Baby-boom to Baby-bust** examines the implications of shrinking populations.

### TOPICS OF INTEREST

The prevailing baby-bust is examined including such subjects as:

- late parenting, childlessness
- widespread sterilization, contraceptive methods
- population policies in an international context
- change in the age structure and the associated activities (education, consumption, spending, social security and the like)
- working mothers - can the demand

SEP 8 1992

APR 3 1993

## UNE GÉRATION DANGER

ts par femme ayant chuté au plus bas niveau jamais atteint dans l'histoire du Canada. Le placement de la génération actuelle n'est guère assuré. Beaucoup d'hommes et de femmes Canadiens renoncent à avoir des enfants.

**La fécondité au Canada: Croissance et déclin de la population** examine les implications du ralentissement de la croissance de la population.

### THÈMES

La natalité fait l'objet de sept chapitres traitant de

l'augmentation et la diminution de la population, l'accès et l'infécondité; l'effacement de la fécondité dans la structure par âge et leurs répercussions sur l'assimilation, les dépenses des consommateurs, la sécurité sociale et la participation active; les changements démographiques selon une perspective internationale; et pour les mères actives d'occuper deux emplois à la fois.

# Population

# Estimation Methods

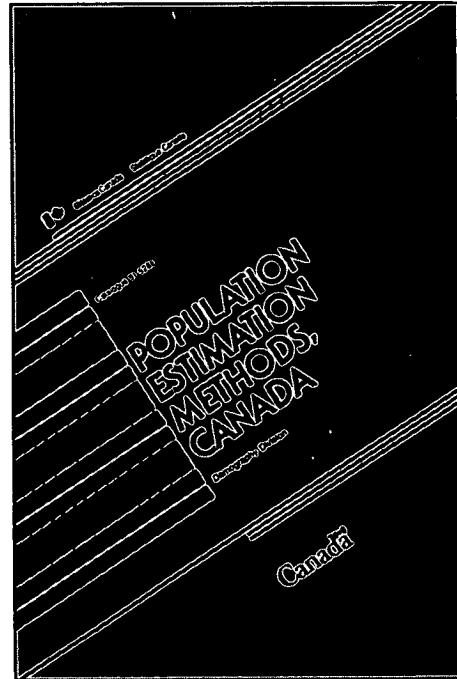

DATE DUE

**Population Estimation Methods, Canada** provides a detailed yet lucid coverage of the procedures formulae and data used to generate the entire range of Statistics Canada's population estimates.

Major topics covered in its seven chapters are: emigration, internal migration, intercensal estimates, postcensal estimates of the total population, post-censal estimates by sex, age and marital status, local area estimates and family estimates.

Graphs, charts and tables, along with a glossary of principal terms and symbols make, **Population Estimation Methods, Canada** an easy-to-use reference for anyone using population data or an excellent text for students and professors in the social sciences.

# Méthodes

# d'estimation

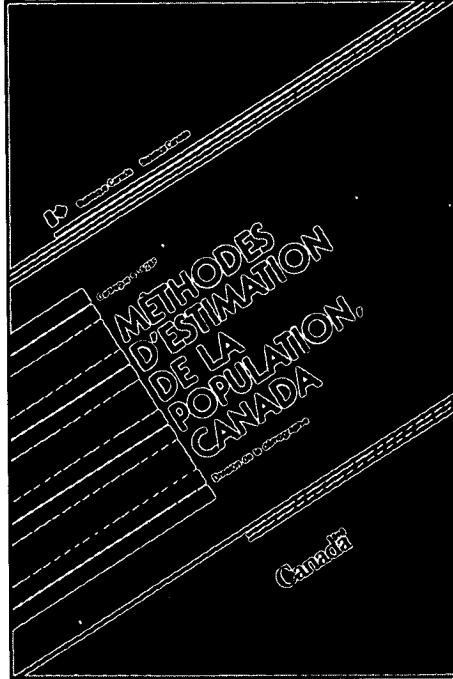

# de la population

**Méthodes d'estimation de la population, Canada** fournit une description claire et détaillée des formules et des sources de données utilisées pour produire les estimations de population à Statistique Canada.

Les sujets discutés dans les sept chapitres sont: émigration, migration interne, estimations intercensitaires, estimations postcensitaires de la population totale, estimations postcensitaires selon le sexe, l'âge et l'état matrimonial, estimations de la population infraprovinciale et des familles.

Des graphiques, tableaux et un glossaire des principaux termes et symboles rendent **Méthodes d'estimation de la population, Canada** facile d'emploi pour tous les utilisateurs des données de population et en font un excellent ouvrage de consultation pour les étudiants et les professeurs en sciences sociales.

# INTERESTED IN ACQUIRING A CANADIAN ORIGINAL?

Then *Canadian Social Trends* is the acquisition for you. A first on the Canadian scene, this journal is claiming international attention from the people who need to know more about the social issues and trends of this country.

Drawing on a wealth of statistics culled from hundreds of documents, *Canadian Social Trends* looks at Canadian population dynamics, crime, education, social security, health, housing, and more.

For social policy analysts, for trendwatchers on the government or business scene, for educators and students, *Canadian Social Trends* provides the information for an improved discussion and analysis of Canadian social issues.

Published four times a year, *Canadian Social Trends* also features the latest social indicators, as well as information about new products and services available from Statistics Canada.

# VOUS DÉSIREZ FAIRE L'ACQUISITION D'UNE ŒUVRE ORIGINALE?

Alors *Tendances sociales canadiennes* est la publication qu'il vous faut. Première en son genre sur la scène canadienne, cette revue retient l'attention des gens d'ici et d'ailleurs qui désirent en savoir plus sur les questions sociales de l'heure au pays.

À l'aide d'abondantes statistiques extraites de nombreux documents, *Tendances sociales canadiennes* brosse le tableau de la dynamique de la population canadienne, de la criminalité, de l'éducation, de la sécurité sociale, de la santé, de l'habitation et de plusieurs autres sujets.

Que ce soit pour les analystes de la politique sociale, les analystes des tendances oeuvrant au sein des administrations publiques et du monde des affaires, les enseignants ou encore les étudiants, *Tendances sociales canadiennes* dégage l'information nécessaire à des discussions et des analyses approfondies relativement aux questions sociales.

*Tendances sociales canadiennes* présente également les plus récents indicateurs sociaux de même que des renseignements relatifs aux produits et services qu'offre Statistique Canada.

## CANADIAN SOCIAL TRENDS

Catalogue No. 11-008E is available for \$8.00 per copy/\$32.00 annually (in Canada); \$9.00 per copy/\$36.00 annually (elsewhere); students 30% discount from:
