

Canada's

Agriculture, Food and Beverage INDUSTRY

Canada's Maple Syrup Industry

Canada produces about 85% of the world's maple syrup, selling more than 40,600 tonnes valued at over \$213 million to nearly 45 different countries.

Marketing efforts in the Maple Syrup industry have evolved, and now look beyond traditional markets towards value-added market opportunities for maple syrup infusion into other products (cereals, yogurt, maple butters etc.). This dimension of the industry contributes greatly to Canada's value-added export portfolio. Demand for maple products continues to see a long-term trend of steady growth. The industry is increasingly focusing on markets demanding pre-packed maple syrup and value-added products as opposed to bulk syrup.

There are approximately 10,500 maple syrup producers in Canada, most of which reside in Quebec with the rest in Ontario, New Brunswick and Nova Scotia. Quebec leads the country in maple production, with 91% of

the Canadian market share (Statistics Canada, 2007).

In 2007, Canada produced 5,135,000 gallons of maple syrup, a drop of 800,000 gallons from 2006. This production had an estimated gross value of over \$168 million (Statistics Canada, 2007). Exports have steadily risen from \$163 million in 2005, to \$187 million in 2006 to a high of \$213 million in 2007. Canada's largest export market is the US with approximately 56% of the total, followed by Japan with 8% and Germany with 7%. Exports were greater than annual production in 2006 due to drawing down of stored inventory of maple syrup.

Additional Information

In the early 1970's, science helped to rejuvenate this industry by giving farmers new methods of production. Researchers looked at gathering sap with tubing, using vacuum pumps, reverse osmosis, and various types of evaporators. These new and invigorated methods of production made the industry more efficient.

Today, Canadian production has some of the most innovative systems in maple technology.

The Canadian Food Inspection Agency (CFIA) monitors the safety and quality of maple syrup, and ensures producers meet federal standards. Likewise, the CFIA is responsible for the federal classification of maple syrup within the following categories:

- Canada No. 1 (extra light, light, medium)
- Canada No. 2 (amber)
- Canada No. 3 (dark)

During the growing season, maple trees accumulate starch. With the spring thaw, enzymes change this starch into sugar, which mixes with the water absorbed through the roots, imparting a slightly sweet taste. Maple sap contains water (about 97%), minerals, organic acids and maple taste

precursors. In early March, the sap starts to run for about six to eight weeks and gives energy to the tree to make it grow. All trees produce sap, but maple trees produce greater quantities with a sweeter taste.

The main syrup producing trees are sugar maples, red maples and silver maples. During the maple sugaring season and average tree yields between 35 and 50 litres of sap, this will produce between 1 and 1.5 litres of maple syrup. It takes on average, 40 litres of sap to make 1 litre of syrup.

A 50 ml serving of maple syrup contains 167 calories, 43 grams of sugar, 117 mg of potassium, 7 mg of sodium and no fat.

Producers take great care to ensure long-term survival of their maple sugar bush. While collecting sap does rob a tree of some of its nourishment, no harm is done to a tree as less than one tenth of a tree's sugar is removed during tapping.

Canada's food and agricultural products reflect our dedication to excellence, and our deep commitment to safety, quality, environmental responsibility, innovation and service.

In every facet of our industry, we seek to earn the trust of our customers by answering their needs and exceeding their expectations. Those values along with our belief in building strong relationships, have given Canadian agriculture and food products an international reputation for excellence. Customers around the world know that they can trust the goodness of Canada.
