ACKNOWLEDGEMENTS

This project, undertaken by Statistics Canada (STC) was initiated and sponsored by Quantitative Analysis and Socio-demographic Research (QASR) and Band Support and Capital Management (BSCM) of Indian and Northern Affairs Canada (INAC) in response to departmental needs for up-to-date household and family projections. It was carried out by the population projection staff of the Demography Division (STC), in consultation with Quantitative Analysis and Socio-demographic Research and Band Support and Capital Management, INAC. The on-going project management was provided by G. Larocque and M. Sinclair of INAC and J. Perreault of STC.

The author wishes to acknowledge, with thanks, the help she has received in preparing this study. Appreciation is expressed to G. Ouellette and M. Whalen who were responsible for census data retrieval and V. Kawka for programming assistance. Research assistance received from S. Paulin and S. Rémillard is gratefully acknowledged. The author is indebted to the support and generous cooperation of QASR and BSCM, INAC.

Appreciation is also expressed to G. Larocque and P. Gauvin of Quantitative Analysis and Socio-demographic Research, INAC for their comments on earlier drafts of this report.

HIGHLIGHTS

- * By 2011, the number of registered Indian households in Canada is projected to range between 210,000 and 221,000 up from 94,000 in 1986.
- * The projected increase in the total number of households corresponds to some 5,000 households each year, on average.
- * Of the maximum total increase of 127,000 Indian households expected over the 25 year period, from 1986 to 2011, 36,000 households (28%) are due to the registration and growth of the Bill C-31 population since 1986.
- * In 1986, the Bill C-31 households comprised around 5% of the total Indian households; by 1990, this proportion would increase to roughly 20%. After 1990, the proportion is expected to decline gradually to reach 18% in 2011.
- * Of the 221,000 households expected by 2011, using the high growth scenario, some 132,000 could be on reserve, and 89,000 off reserve, assuming 18% of the Bill C-31 population live on reserve by 1996.
- * Among the regions, the Prairies show the fastest rate of household growth, Alberta leading with about 8%, and the national average at about 5%.
- * Ontario would continue to have the largest number of households, 53,000 in 2011 (compared to 25,000 in 1986). British Columbia could rank second with 38,000, followed by Saskatchewan with 34,000 households.
- * By 2011, the number of Indian families would reach approximately 188,000 according to Series A and 178,000 according to Series B, up from some 82,000 for both series in 1986.
- * The projected increase in the total number of families corresponds to approximately 4,000 families each year.
- * Of the total increase of 106,000 families expected between 1986 and 2011, some 29,000 families or 27% can be attributed to the registration and growth of the Bill C-31 population.
- * Of the projected 188,000 Indian families in 2011, some 113,000 could be living on reserve and about 75,000 off reserve, assuming the present distribution on/off reserve of the regular Indians remains essentially unchanged and assuming 18% of the Bill C-31 population will be living on reserve by 1996.

- * The largest number of families would be residing in Ontario in 2011, some 42,000 families compared to 21,000 in 1986, followed by British Columbia, with 32,000 families.

DEFINITION OF TERMS

Census Family refers to a husband and a wife (with or without children who have never married, regardless of age), or a lone parent of any marital status, with one or more children who have never married, regardless of age, living in the same dwelling. For census purposes, persons living in a common-law type of arrangement are considered as currently married, regardless of their legal marital status.

Collective Household refers to a person or group of persons who occupy a collective dwelling and do not have a usual place of residence elsewhere in Canada. **Collective Dwelling** refers to a dwelling of a commercial, institutional or communal nature.

Family Reference Person (formerly head of family) refers to a person in the family (who is either the husband or the wife of a married couple, either partner in a common-law relationship or the parent in a lone-parent family) to whom the relationship of all other family members is recorded. Note that the family reference person is not necessarily the household maintainer.

Household Maintainer refers to the person or one of the persons in the household who pays the rent, or the mortgage, or the taxes, or the electricity, etc. for the dwelling.

Maintainer Proportion refers to the number of household maintainers per 100 persons in a given population.

Private Household refers to a person or group of persons (one person living alone, one family, two or more families or a group of unrelated persons) who occupy a private dwelling and do not have a usual place of residence elsewhere in Canada. The number of private households equals the number of occupied dwellings.

Status or Registered Indian Census Family (based on census data) refers to a family in which one spouse or both spouses are status Indians.

Status or Registered Indian Household (based on census data) refers to one in which a status Indian census family exists or 50% or more of the individuals in the household are defined as being status Indians.

INTRODUCTION

This report presents projections of the number of registered Indian private households and census families (hereinafter referred to as households and families) for Canada and Indian and Northern Affairs Canada (INAC) regions by place of residence. A registered or status Indian (hereinafter referred to as Indian) is defined as any person who is considered an Indian under the 1951 Indian Act and whose name is recorded in the Indian Register maintained by INAC. In June 1985, amendments to the Indian Act (or Bill C-31) were passed by Parliament. The amendments restored Indian status and band membership rights to individuals (and their children) who lost them because of discriminatory clauses in the Indian Act. Individuals who have their Indian status restored under Bill C-31 are referred to as Bill C-31 Indians in this report. The children of these registrants are also referred to as Bill C-31 Indians. On the other hand, the non-Bill C-31 Indians or those individuals (and their children) whose names are in the Indian Register not pursuant to Bill C-31 are referred to as regular Indians in this report.

As defined by Indian and Northern Affairs Canada, "regions" coincide with provinces in all but two cases: i) in 1986, the base year for these projections, the Ontario Region included some 1,900 Indians living in the Quebec portion of the Akwesasne reserve near Cornwall; ii) the Yukon Region included about 400 Indians from the Takuriver Tlingit and Liard River Bands located in British Columbia. The Atlantic Region comprises the Indian population of New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland.

The projections of registered Indian households and families are based on the 1986 Census data on Indian households and families, and the latest population projections of registered Indians, 1986 to 2011 prepared by STC for INAC. The universe refers to private households only, that is, it excludes collective households. The projections cover a 25-year period, from 1986 to 2011.

Two projection series, labelled A and B, are presented. These projections should not be taken as predictions. The assumptions are based on past trends, and major changes in socio-economic and/or political conditions could result in patterns quite different from those projected. These projections should, therefore, be considered as illustrative. They are developed to indicate the number of households and families to be obtained as a result of certain assumptions about future rates of household and family formation and population change.

This report is divided into two parts. The first part provides selected highlights of the projection results, definition of terms used, a brief description of the methodology and assumptions, and an analysis of the projection results. In general, the focus of the analysis is on the national results, but the most significant regional disparities are mentioned. The second part of the report provides detailed tables of each of the projection series of households and families, for Canada and regions, from 1986 to 2011.

PART I. PROJECTION METHODOLOGY AND RESULTS

1. METHODOLOGY, SOURCES AND ASSUMPTIONS

1.1 Households and Families Projection Model

The methodology used to project the number of households and families is based on the "headship rate" method.¹ A headship rate, or maintainer rate, is defined as the number of household maintainers (family reference persons in the case of families) per 100 persons in a given population. It is calculated for various subgroups of a population such as age, sex, and residence (i.e., on and off reserve). In the model, two sets of rates are required for households and for families, respectively.

The projection model basically involves applying maintainer rates to the corresponding projected adult population by various subgroups. This approach has the distinct advantage of making direct use of the latest population projections of registered Indian adults by age, sex, residence and region as its base.

This model is used to project the number of households and families by age and sex of the maintainer (in the case of households) or of the reference person (in the case of families) and by residence and regions. In addition, the number of households and families is projected separately for the regular Indian and Bill C-31 populations. The projection figures for the total registered Indians are obtained by summing the respective regular Indian and Bill C-31 populations. Three age groups are considered: 15-29, 30-64 and 65 and over.

As in the case of projecting the Indian population, a regional approach is adopted for household and family projections. Essentially, this approach involves first the development of

1 For a general description of the method, see United Nations, 1973, pp. 30-40.

projections of households and families for each region, then the aggregate of these regional figures to obtain the national projections.

1.2 Population Projections Used

In the latest population projections of registered Indians, the two base populations used are: 1) the regular Indian population, by single years of age and sex, for the regions, as of December 31, 1986; and 2) the Bill C-31 population by single years of age and sex, for the regions, as of December 31, 1986. The regular Indian population is obtained from the Indian Register, adjusted for the late reporting of events. The Bill C-31 population is obtained from the reinstatement file and is adjusted to include the births believed to have occurred to the women since their reinstatement.²

Six main sets of population projections were generated based on a combination of two mortality, three fertility and one interregional migration assumptions. These population projections also include some 86,000 persons assumed to gain status pursuant to Bill C-31 between 1985 and 1990.

The projected population is broken down by residence, namely, on and off reserve. One assumption is adopted for the regular Indians: it is assumed that the regional percentage distribution of Indians by place of residence (the three-year average 1984 to 1986) would remain virtually unchanged throughout the projection period. On the other hand, because of the uncertainty surrounding

2 For a general description of the projection method, assumptions and results, see S. Loh, Population Projections of Registered Indians, 1986-2011, Indian and Northern Affairs Canada, 1990.

the Bill C-31 population, three assumptions on/off reserve are formulated: 10%, 18% and 25% of the Bill C-31 Indians might live on reserve by 1996. These percentages are kept constant thereafter.

Two population projections were selected as a base for the household and family projections. The underlying assumptions of the selected population projection series are indicated in Table 1.1.

Table 1.1 Summary of Fertility, Mortality and On-reserve Proportions Assumptions Underlying the Selected Population Projections, Canada, 1986-2011

Growth Scenario	Fertility Assumption	Mortality Assumption	Bill C-31 On-reserve Proportion
Medium	Slow decline	Declining	18%
Slow	Rapid decline	Constant	10%

Note: The interregional migration assumption (net zero) is the same for all projections.

Source: S. Loh, Population Projections of Registered Indians, 1986 to 2011, Indian and Northern Affairs Canada, 1990, p. 48.

1.3 Maintainer Rates: Data Source and Assumptions

The household and family projection model used by Statistics Canada is essentially an application of extrapolated maintainer rates to the corresponding projected adult population. The extrapolation of rates is done by using a modified exponential curve on the basis of observed intercensal changes.

Information on age and sex distribution of household maintainers and family reference persons is not collected in the Indian Register. This kind of information can only be obtained

from the Census of Canada, in this instance the 1981 and 1986 censuses.

It is known that some 136 Indian reserves and Indian settlements, representing about 45,000 individuals were incompletely enumerated in the 1986 Census. This poses a problem in estimating the total Indian population in Canada. However, the impact of the missing data is presumed to be small on the calculation of maintainer rates. It is hoped that the Indian population of incompletely enumerated reserves have characteristics that are not too different from the rest of the Indian population.

In the census, the geographic breakdown is by province rather than INAC regions; thus maintainer rates are computed at the provincial/territorial level. Using provincial/territorial maintainer rates to approximate regional figures affect only four regions: Quebec, Ontario, British Columbia and Yukon. The impact of this is believed to be minor.

By the end of 1986, some 18,000 Bill C-31 registrants were included in the Indian Register. As the census is the only source of data on Indian households and families, it is assumed that the maintainer rates obtained from the 1986 Census pertain to both regular Indian and Bill C-31 populations.

Because of these data constraints, it is assumed that the 1986 maintainer rates will remain constant throughout the projection period.³

3 It has been shown that population growth and a changing age structure account for roughly 80% of the change in households between 1986-2011 for the Canadian population (Statistics Canada, Catalogue No. 91-522, forthcoming).

1.4 Combination of Assumptions and Projections Series

Two series of household and family projections, labelled Series A and Series B, are offered. Series A, a higher growth scenario, combines constant 1986 maintainer rates with the medium-growth population projection and an 18% on-reserve proportion of the Bill C-31 population. Series B, a lower growth scenario, combines constant 1986 maintainer rates with the slow-growth population projection and a 10% on-reserve proportion of the Bill C-31 population (Table 1.1). Series A is the more likely scenario.

2. PROJECTION RESULTS

A. HOUSEHOLDS

2.1 Trends in the Number of Households

In 1986, there were about 94,000 Indian households in Canada. The number of households is expected to increase substantially within the next 25 years (Figure 2.1 and Table 2.1). By 2011, the final year of the projection period, the number of Indian households may be of the order of 221,000 according to Series A, 210,000, according to series B.

These projections correspond to annual increases that range between 4,000 and 7,000 households, depending on the period, or between 2% and 8%. The average annual rate of increase of the Indian households is expected to be higher than that for the Canadian population as a whole. Between 1986 and 2006, the number of households for the overall Canadian population is expected to grow at an average rate of 1% to 3% per year (Statistics Canada, 1987).

Figure 2.1
Trends in the Total Number of Registered Indian Households,
Canada, 1986-2011, Series A and B

Source: Detailed Tables, Part II.

As shown in Table 2.1, the increase in the number of Indian households is expected to be more pronounced between 1986 and 1991 (from 94,000 to 131,000, i.e., an increase of 37,000 or 39%). This is primarily due to the registration of the Bill C-31 population. Between 1986 and 1990 (the year that the Bill C-31 registration process is expected to be largely completed), an average of 17,000 individuals are expected to be added to the Indian Register, annually.

Table 2.1 Total Number of Registered Indian Households, Canada, 1986 to 2011, Series A and B

Year	Number of Households		Average Annual Growth		Rate of Growth	
	Series A	Series B	Series A	Series B	Series A	Series B
	(in thousands)				(in per cent)	
1986	94.1	94.1	-	-	-	-
1991	131.2	131.0	7.4	7.4	7.9	7.8
1996	152.2	151.0	4.2	4.0	3.2	3.1
2001	174.7	171.6	4.5	4.1	3.0	2.7
2006	197.9	191.3	4.7	3.9	2.7	2.3
2011	221.4	209.7	4.7	3.7	2.4	1.9

Source: Detailed Tables, Part II.

In 1986, of the 94,000 Indian households in Canada, some 5,000 are estimated to be households of the recently reinstated population (Table 2.2). By 1990, this number would increase to some 26,000 while that of the total registered Indians could reach 127,000. In terms of percentage, the Bill C-31 households are expected to increase from 5% in 1986 to 20% in 1990 of total registered Indian households (Table 2.3). After 1990, the proportion of Bill C-31 households is expected to decline slightly to 18% by 2011.

Table 2.2 Number of Regular and Bill C-31 Indian Households, Canada, 1986 to 2011, Series A

Year	Regular Indians	Bill C-31	Total
(in thousands)			
1986	89.5	4.6	94.1
1987	92.3	10.6	102.9
1988	95.1	16.0	111.1
1989	98.0	21.1	119.1
1990	101.1	26.1	127.2
1991	104.4	26.9	131.2
1996	121.7	30.5	152.2
2001	140.6	34.0	174.7
2006	160.4	37.5	197.9
2011	180.8	40.6	221.4

Note: Due to rounding, the data may not always add up to the totals.

Source: Detailed Tables, Part II.

Table 2.3 Proportion of Regular and Bill C-31 Indian Households to Total Indian Households, Canada, 1986 to 2011, Series A

Year	Regular Indians	Bill C-31	Total
(in per cent)			
1986	95.0	5.0	100.0
1987	90.0	10.0	100.0
1988	86.0	14.0	100.0
1989	82.0	18.0	100.0
1990	80.0	20.0	100.0
1991	80.0	20.0	100.0
1996	80.0	20.0	100.0
2001	80.0	20.0	100.0
2006	81.0	19.0	100.0
2011	82.0	18.0	100.0

Source: Detailed Tables, Part II.

2.2 Households by Age and Sex of the Maintainer

A slight aging is expected in the age structure of the household maintainers. In 1986, households headed by a young adult aged 15-29 years represented 25% of the total Indian households (Table 2.4). In 2011, this proportion would be roughly 15% (Series A).

Table 2.4 Distribution of Households by Age and Sex of Maintainers, Canada, 1986 and 2011, Series A

Age group	1986			2011		
	Total	Male	Female	Total	Male	Female
(in per cent)						
15-29	25.0	24.0	26.0	15.0	15.0	15.0
30-64	63.0	65.0	59.0	73.0	76.0	67.0
65+	12.0	11.0	15.0	12.0	9.0	18.0
Total	100.0	100.0	100.0	100.0	100.0	100.0

Source: Detailed Tables, Part II.

The proportion of households headed by elderly people will remain stable at around 12%. However, the proportion of households maintained by females aged 65 and over is expected to increase from approximately 15% in 1986 to 18% in 2011 while that of male maintainers aged 65 and over is expected to decline, from roughly 11% in 1986 to 9% in 2011.

2.3 Distribution of Indian Households On and Off Reserve

In 1986, of the 94,000 Indian households, 64,000 (68%) are estimated to be households of registered Indians living on reserve (Tables 2.5 and 2.6). By 2011, there would be 132,000 registered Indian households on reserve according to Series A; slightly less,

123,000, according to Series B (a difference of 9,000 between the two series). In Series A, it is assumed that 18% of the Bill C-31 population would live on reserve by 1996 while Series B assumes 10%.

Table 2.5 Registered Indian Households, On and Off Reserve, Canada, 1986 to 2011, Series A and B

Year	On Reserve		Off Reserve		Total	
	Series A	Series B	Series A	Series B	Series A	Series B
(in thousands)						
1986	64	64	31	31	94	94
1991	76	75	56	56	131	131
1996	89	87	63	64	152	151
2001	103	99	72	72	175	172
2006	117	111	81	80	198	191
2011	132	123	89	87	221	210

Note: Due to rounding, the data may not always add up to the total.

Source: Detailed Tables, Part II.

Table 2.6 Proportion of Registered Indian Households, On and Off Reserve, Canada, 1986 to 2011, Series A and B

Year	On Reserve		Off Reserve		Total	
	Series A	Series B	Series A	Series B	Series A	Series B
(in per cent)						
1986	68.0	68.0	32.0	32.0	100.0	100.0
1991	58.0	57.0	42.0	43.0	100.0	100.0
1996	59.0	58.0	41.0	42.0	100.0	100.0
2001	59.0	58.0	41.0	42.0	100.0	100.0
2006	59.0	58.0	41.0	42.0	100.0	100.0
2011	60.0	59.0	40.0	41.0	100.0	100.0

Source: Detailed Tables, Part II.

The proportion of Indian households on reserve would decline, from 68% in 1986 to 60%, in 2011. Since the majority of the Bill C-31 population live off reserve, the rate of annual increase of the off-reserve households is expected to be larger than that of the on-reserve households, 8% versus 4%.

2.4 Regional Distribution of Households

The growth of households among the regions shows some variation. This reflects the different momentum of growth of the adult population, projected for each region. As shown in Table 2.7, the Prairies, namely Alberta and Saskatchewan, would have the fastest rate of growth (7 to 8%).

Table 2.7 Average Annual Growth of Registered Indian Households by Region, 1986-2011, Series A

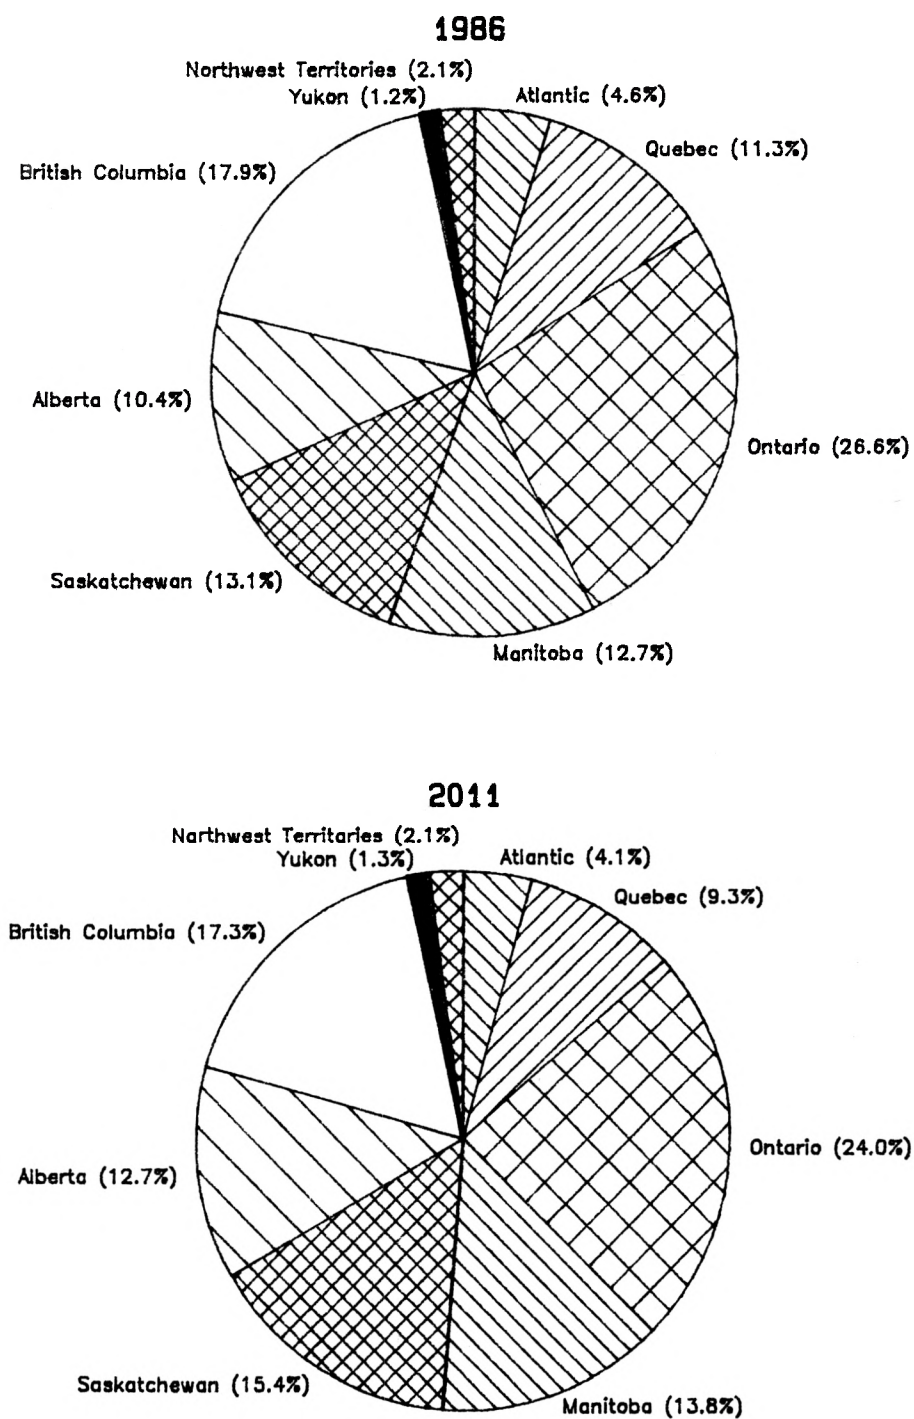

Region	Number	(%)
	(in thousands)	
Canada	5.1	5.4
Atlantic	0.2	4.4
Quebec	0.4	3.8
Ontario	1.1	4.5
Manitoba	0.7	6.2
Saskatchewan	0.9	7.1
Alberta	0.7	7.5
British Columbia	0.9	5.1
Yukon	0.1	6.2
Northwest Territories	0.1	5.0

Source: Detailed Tables, Part II.

The regional distribution of the number of households follows closely that of the population, and changes little over the projection period (Figure 2.2). By 2011, Ontario would continue to have the largest proportion, 24% of the Indian households or

53,000 out of 221,000. It would be followed by British Columbia with approximately 17%, Saskatchewan with about 15%, Manitoba with 14%, and Alberta with 13%. Quebec would have 9%, while the Atlantic Region, Yukon and Northwest Territories would continue to have much smaller shares, less than 5% each.

B. FAMILIES

2.5 Trends in the Number of Families

In 1986, there were about 82,000 Indian families in Canada. By 2011, the last year of the projection period, the number of Indian families would stand at 188,000 according to Series A, and 179,000 in Series B (Figure 2.3 and Table 2.8).

This corresponds to an annual average increase of approximately 4,000 families, or 5%. The increase in the number of Indian families is expected to be higher than that of the number of total Canadian families. Between 1986 and 2006, the total number of families in Canada is expected to grow at an annual rate of 1% to 2% (Statistics Canada, 1987).

Figure 2.3
Trends in the Total Number of Registered Indian Families,
Canada, 1986-2011, Series A and B

Table 2.8 Total Number of Registered Indian Families, Canada, 1986 to 2011, Series A and B

Year	Number of Families		Average Annual Growth		Rate of Growth	
	Series A	Series B	Series A	Series B	Series A	Series B
	(in thousands)		(in per cent)			
1986	82.2	82.2	-	-	-	-
1991	114.8	114.6	6.5	6.5	7.9	7.9
1996	132.5	131.5	3.5	3.4	3.1	2.9

2011	188.2	178.5	3.7	2.8	2.2	1.7

Source: Detailed Tables, Part II.

Due to the registration of the Bill C-31 population, the growth would be rapid between 1986 and 1990, from 82,000 to 111,000, an increase of 35% in four years. As shown in Table 2.9, the number of Bill C-31 families would increase from around 4,000 in 1986 to close to 23,000 in 1990.

Table 2.9 Number and Proportion of Regular and Bill C-31 Indian Families to the Total Indian Families, Canada, 1986 to 2011, Series A

Year	Regular Indians		Bill C-31		Total	
	('000)	(%)	('000)	(%)	('000)	(%)

2.6 Projected Indian Families On and Off Reserve

In 1986, there were about 55,000 registered Indian families living on reserve (Table 2.10). By 2011, the number of on-reserve Indian families would increase to 113,000 according to Series A, and 105,000 according to Series B. Yet, the share of the on-reserve families is expected to decline from 67% (1986) to 60%, in 2011 (Table 2.11, Series A).

Table 2.10 Registered Indian Families, On and Off Reserve, Canada, 1986 to 2011, Series A and B

Year	On Reserve		Off Reserve		Total	
	Series A	Series B	Series A	Series B	Series A	Series B
(in thousands)						
1986	55.2	55.2	27.0	27.0	82.2	82.2
1991	65.9	65.3	48.9	49.2	114.8	114.6
1996	77.6	75.6	54.9	55.9	132.5	131.5

2.7 Regional Distribution of Families

The distribution of families by region is similar to that of households (Figure 2.4). By 2011, Ontario would still have the largest number of Indian families, around 42,000 (23%), followed by British Columbia with 32,000 families (17%). Saskatchewan would have 30,000 (16%); Manitoba 28,000 (15%); Alberta around 25,000 (13%), and Quebec, 17,000 (9%). The proportions are much smaller in the Atlantic Region and the two territories, less than 5% in each.

Figure 2.4
Regional Distribution of Registered Indian Households
and Families, 2011, Series A

Source: Detailed Tables, Part II.

3. LIMITATIONS OF PROJECTIONS

The accuracy of any projection depends on the reliability of the data of the base population, the time series of births, deaths, migration and maintainer proportions, and the degree to which the underlying assumptions of each component represent the actual trends. The population size of the geographic area and the length of the projections also have direct bearing on the reliability of the projections. In general, the uncertainty of the projection can be expected to increase with the length of the time period, and to be greater for smaller populations. The quality of the Indian projections presented in this report is affected by problems of data quality, small size of the population, and limited data on maintainer proportions.

The population projections are subject to the limitations of the Indian Register itself, such as late reporting and underreporting of events, coding and editing errors, misclassification, as well as the limitations of the census.

As there was limited information on the maintainer proportions of the regular Indians and Bill C-31 population, a single assumption was made for maintainer proportions. It was assumed that the 1986 maintainer proportions would remain constant throughout the projection period.

The base population used to derive the number of households and families is the projected population of registered Indians. The number of households and families thus generated have an Indian as the household maintainer or as the family reference person. Yet, according to the census definition, a non-Indian can be the household maintainer or family reference person of an Indian household or family. Due to the nature of the projection model, and data availability, it was not possible to include those Indian

households and families that have a non-Indian as the maintainer or family reference person. This problem is expected to be minor for the on-reserve population, as more than 90% of the population living on-reserve are Indians. However, for the off-reserve population, this limitation should be kept in mind when utilizing the projection results.

The foregoing discussion indicates the various limitations inherent in the projections presented in this report. The impact of these limitations on projections should be kept in mind when interpreting the results.

4. AVAILABILITY OF UNPUBLISHED PROJECTIONS

In this report, the total number of Indian households and families for Canada and INAC regions are presented for two projection series, each year from 1986 to 1996, and every five years up to 2011. Also available on request are unpublished data of projected households and families by sex and age groups (15-29, 30-64 and 65+) of the household maintainers and family reference persons for Canada, INAC regions and residence, for each year from 1986 to 2011.

Inquiries about the unpublished data should be directed to: Quantitative Analysis and Socio-demographic Research, Indian and Northern Affairs Canada, Ottawa, Ontario, K1A 0H4.

PART II. DETAILED TABLES

D.1

PROJECTED NUMBER OF INDIAN HOUSEHOLDS, CANADA AND INAC REGIONS,
1986 TO 2011

(AS OF DECEMBER 31st)

These tables are organized in the following hierarchical order:

- projection series
 (series A, Series B);
- place of residence
 (on and off reserve, on reserve, off reserve);
- registered Indians
 (total registered Indians, regular Indians, Bill C-31 Indians).

PROJECTED NUMBER OF INDIAN FAMILIES, CANADA AND INAC REGIONS
1986 TO 2011

(AS OF DECEMBER 31st)

These tables are organized in the following hierarchical order:

- projection series
 (series A, Series B);
- place of residence
 (on and off reserve, on reserve, off reserve);
- registered Indians
 (total registered Indians, regular Indians, Bill C-31 Indians).

PROJECTED NUMBER OF FAMILIES, CANADA AND INAC REGIONS, 1986 - 2011
