

West Nile virus and Other Mosquito-borne Diseases National Surveillance Report October 1 to October 7, 2017 (Week 40)

West Nile Virus

Canada

Humans

During week 40, October 1 to October 7, 2017, one confirmed clinical case of West Nile Virus (WNV) from Ontario was reported to the Public Health Agency of Canada (PHAC). Retrospectively, Ontario reported an additional six cases.

As of week 40, 159 clinical cases and six asymptomatic infections have been reported to the PHAC by five provinces (Québec [13], Ontario [143], Manitoba [3], Alberta [5], and British Columbia [1]). Of the 159 clinical cases, fifty-four (34%) were classified as WNV neurological syndrome. As of September 30, six deaths associated with West Nile virus have been reported to the Public Health Agency of Canada during the 2017 season.

Mosquitoes

As of initial surveillance, 17,373 mosquito pools have been tested for WNV in Canada: Québec (1,849), Ontario (14,075), Manitoba (1,028), and Saskatchewan (421).

A total of 544 positive pools of WNV have been found in the following four provinces: 409 in Ontario [Brant County (2), Chatham-Kent (3), Durham Region (10), Eastern Ontario (5), Halton Region (36), Hamilton (31), Haliburton-Kawartha-Pine Ridge District (1), Hastings and Prince Edward Counties (13), Huron County (2), Kingston-Frontenac and Lennox and Addington (5), Lambton (2), Leeds, Grenville and Lanark District Health Unit (1), Middlesex-London (7), Niagara Region (15), Northwestern (1), Ottawa (35), Oxford County (1), Peel (114), Perth District (6), Peterborough County-City (2), Renfrew County and District (2), Simcoe Muskoka District (2), Toronto (62), Waterloo (3), Wellington-Dufferin-Guelph (3), Windsor-Essex County (29), and York Regional (16)]; forty-one in Manitoba [Winnipeg (13), Southern (5), Interlake Eastern (7), and Prairie Mountain (16)]; eighty-four in Québec [Capitale-Nationale (9), Mauricie et du Centre-du-Québec (6), Montréal (10), Outaouais (3), Laval (5), Lanaudière (9), Laurentides (42)]; and ten in Saskatchewan.

Birds

As of week 40, the Canadian Wildlife Health Cooperative has tested 183 dead birds for WNV (Northwest Territories [1], Prince Edward Island [1], Quebec [101], Ontario [61], Saskatchewan [15], Manitoba [2], and British Columbia [2]). Of these, 126 were positive: seventy-eight in Quebec, two in Manitoba, thirty-seven in Ontario, and nine in Saskatchewan.

Domestic Animals

As of week 40, forty-seven horses with WNV infection were reported to the Canadian Food Inspection Agency (CFIA): seven in Québec, eighteen in Ontario, one in Manitoba, eight in Saskatchewan, nine in Alberta, and four in British Columbia.

United States and U.S. territories

As of October 10, 2017, 1,295 human cases of WNV have been reported by the Centers for Disease Control and Prevention (CDC). Of these, 840 (65%) were classified as neuroinvasive disease and 455 (35%) as non-neuroinvasive disease. In addition, 187 presumptive viremic blood donors have been identified.

Europe and Neighbouring Countries

As of October 13, 2017, the European Centre for Disease Prevention and Control (ECDC) reported a total of 252 (confirmed and probable) cases of West Nile fever (Austria [4], Bulgaria [1], Croatia [5], Greece [47], Hungary [19], Israel [17], Italy [53], Romania [60], and Serbia [46]).

Other Mosquito-borne Diseases

Canada

Eastern Equine Encephalitis virus

No human cases of eastern equine encephalitis virus have been reported to the Public Health Agency of Canada in 2017.

California Serogroup virus

Since January 1, 2017, forty-five human cases of laboratory-confirmed cases/exposures of California serogroup virus were diagnosed by the National Microbiology Laboratory in Canada: British Columbia (1), Alberta (5), Saskatchewan (5), Manitoba (1), Ontario (1), Quebec (27), New Brunswick (3), and Nova Scotia (2). Of these cases, twenty-seven were further classified as Jamestown Canyon virus and one Snowshoe hare virus.

FIGURE 1: Geographic distribution of WNV human cases in Canada, as of October 7, 2017

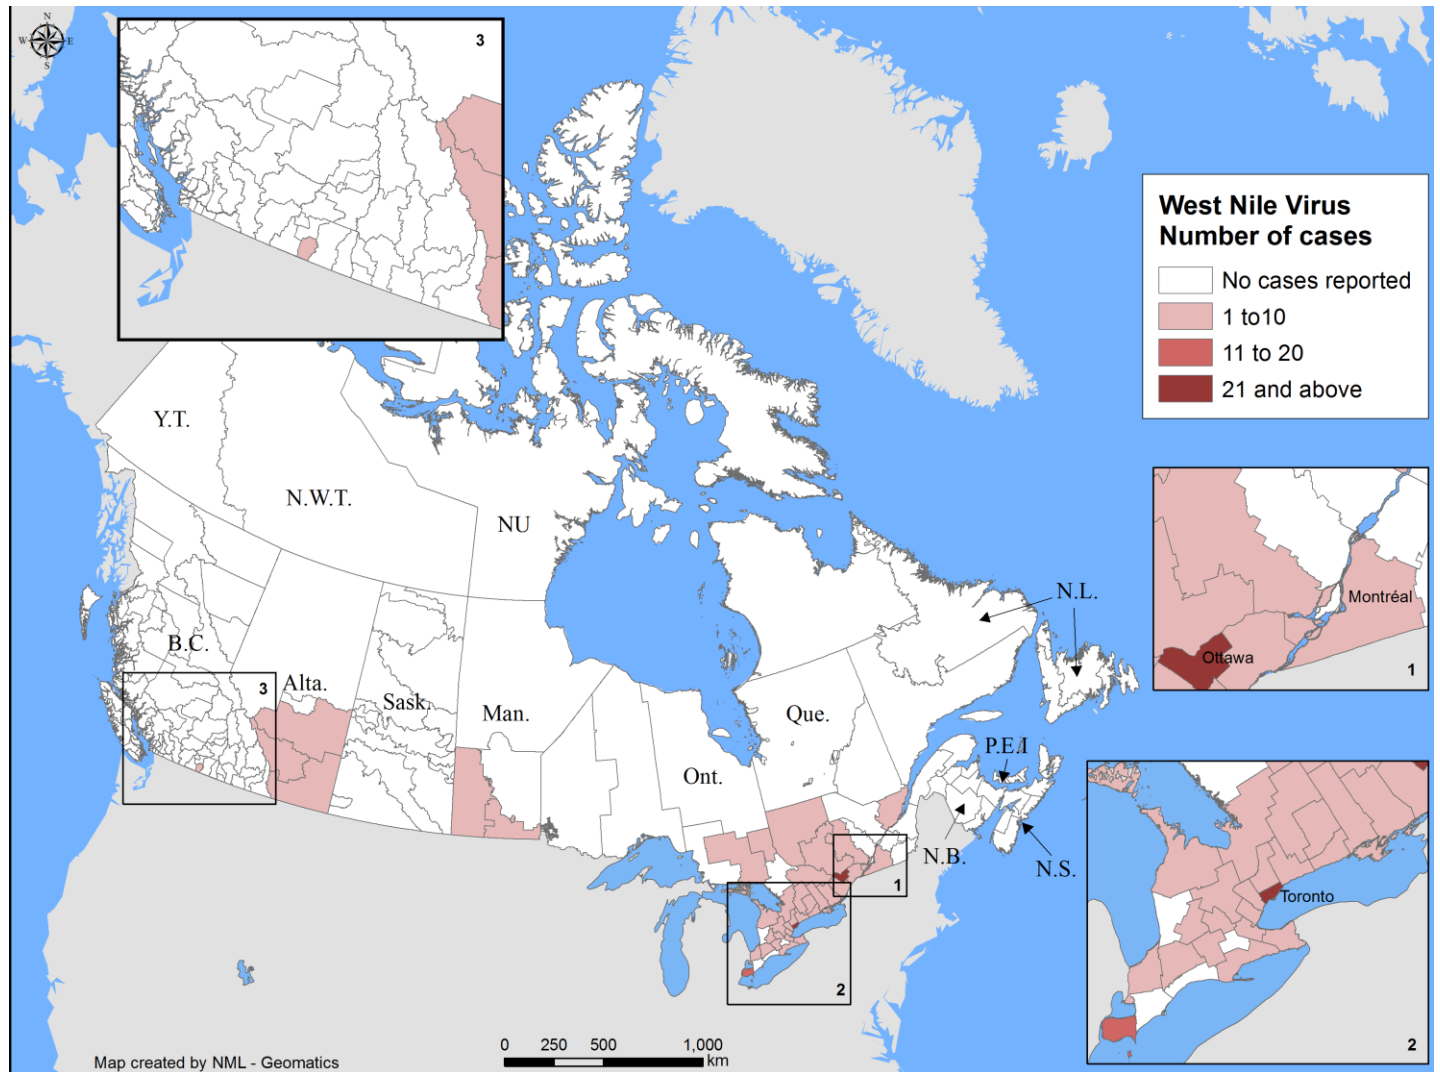

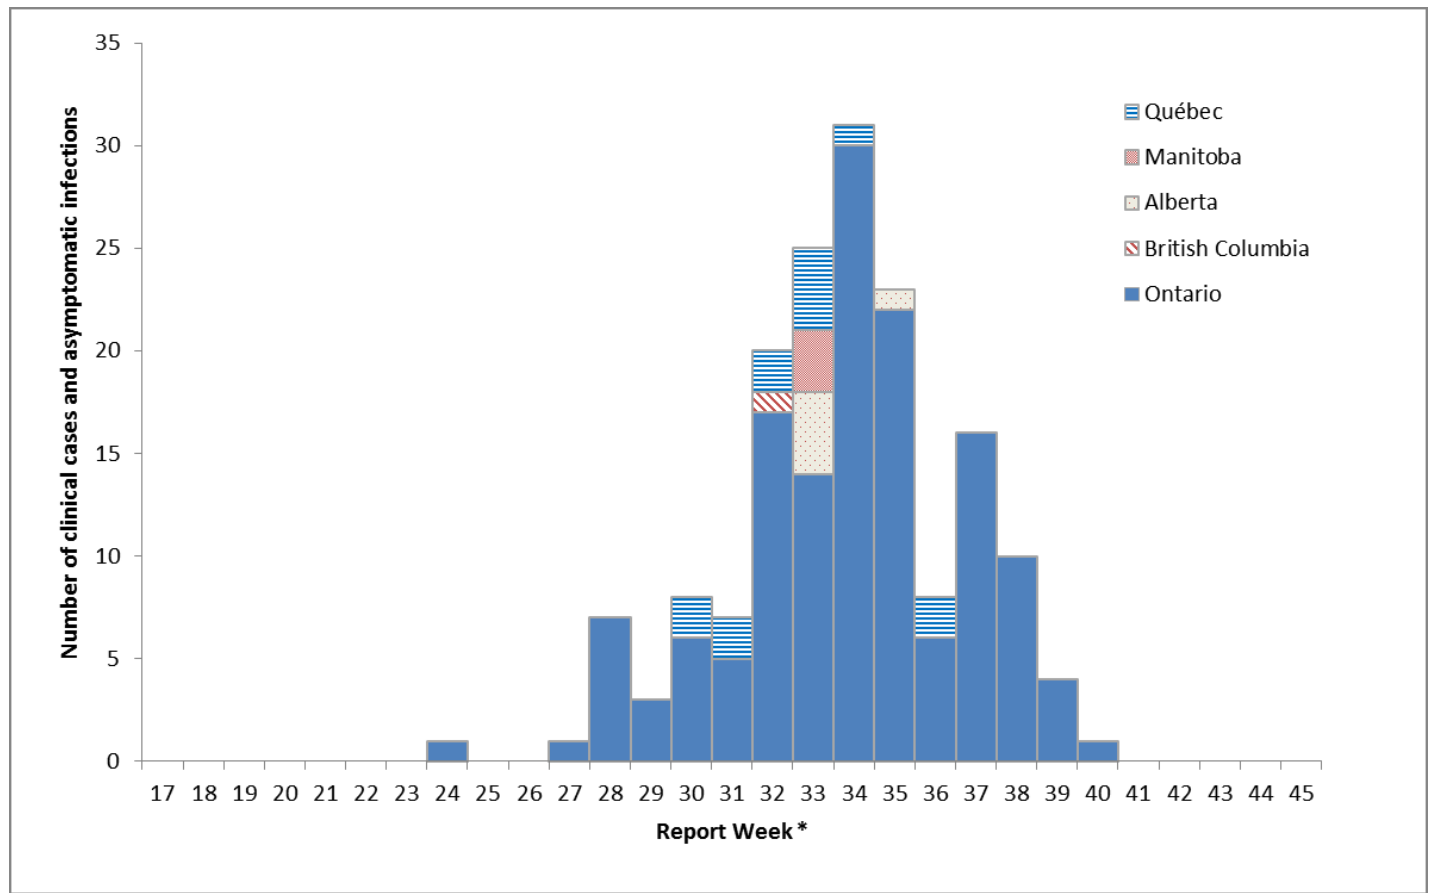

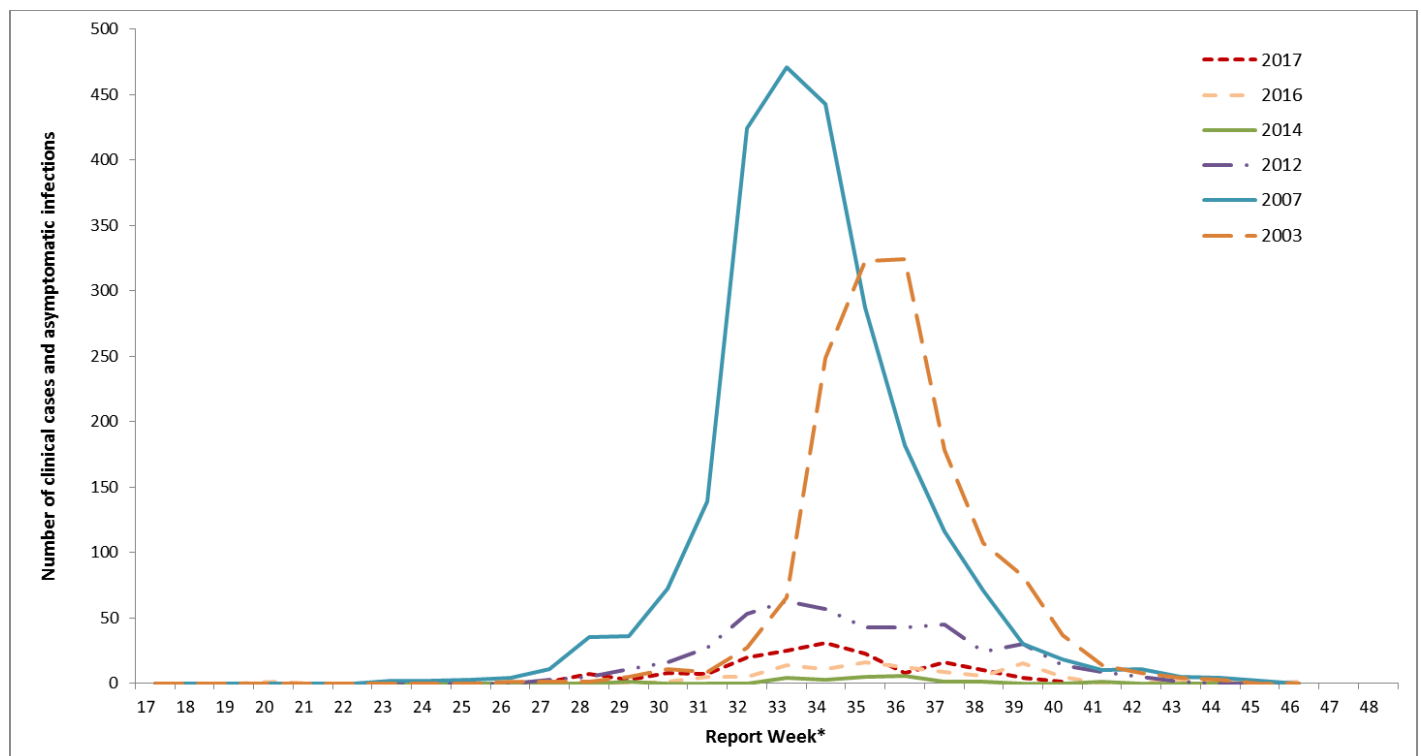

FIGURE 2: West Nile Virus human clinical cases and asymptomatic infections by province/territory as of October 7, 2017

*WNV clinical cases and asymptomatic infections are grouped by report week, based on episode date. Episode date could include one of the following: onset date, diagnosis date, lab sample date or reporting date.

FIGURE 3: West Nile Virus human clinical cases and asymptomatic infections for selected years, in Canada

*WNV clinical cases and asymptomatic infections are grouped by report week, based on episode date. Episode date could include one of the following: onset date, diagnosis date, lab sample date or reporting date.

TABLE 1: West Nile Virus human clinical cases and asymptomatic infections by province/territory for the current report week and year to date, 2017 season

Week 40: October 1 to October 7, 2017						
Province/Territory	WNV clinical cases			Total clinical cases ¹	Number of travel-related WNV cases ²	Number of asymptomatic WNV infection ³
	Neurological syndrome	Non-neurological syndrome	Unclassified/ Unspecified

Total	54	52	53	159	20	6

¹ Total clinical cases are the sum of confirmed and probable: WNV neurological and non-neurological syndromes, along with any unclassified or unspecified cases.

² Likely related to travel outside the Province/Territory. These cases are included in either the total clinical cases or WNV asymptomatic infections.

³ Satisfies WNV diagnostic test criteria in the absence of clinical criteria. This category could include asymptomatic blood donors whose blood is screened using a nucleic acid amplification test, by blood operators (i.e. Canadian Blood Services or Hema-Quebec) and is subsequently brought to the attention of public health officials. Blood operators in Canada perform a supplementary WNV specific nucleic acid amplification test following any positive donor screen test result.

⁴ Saskatchewan provides counts of WNV neurological syndrome cases only.

TABLE 2: Number of mosquito pools tested for WNV and number of positive mosquito pools by province/territory, 2017 season

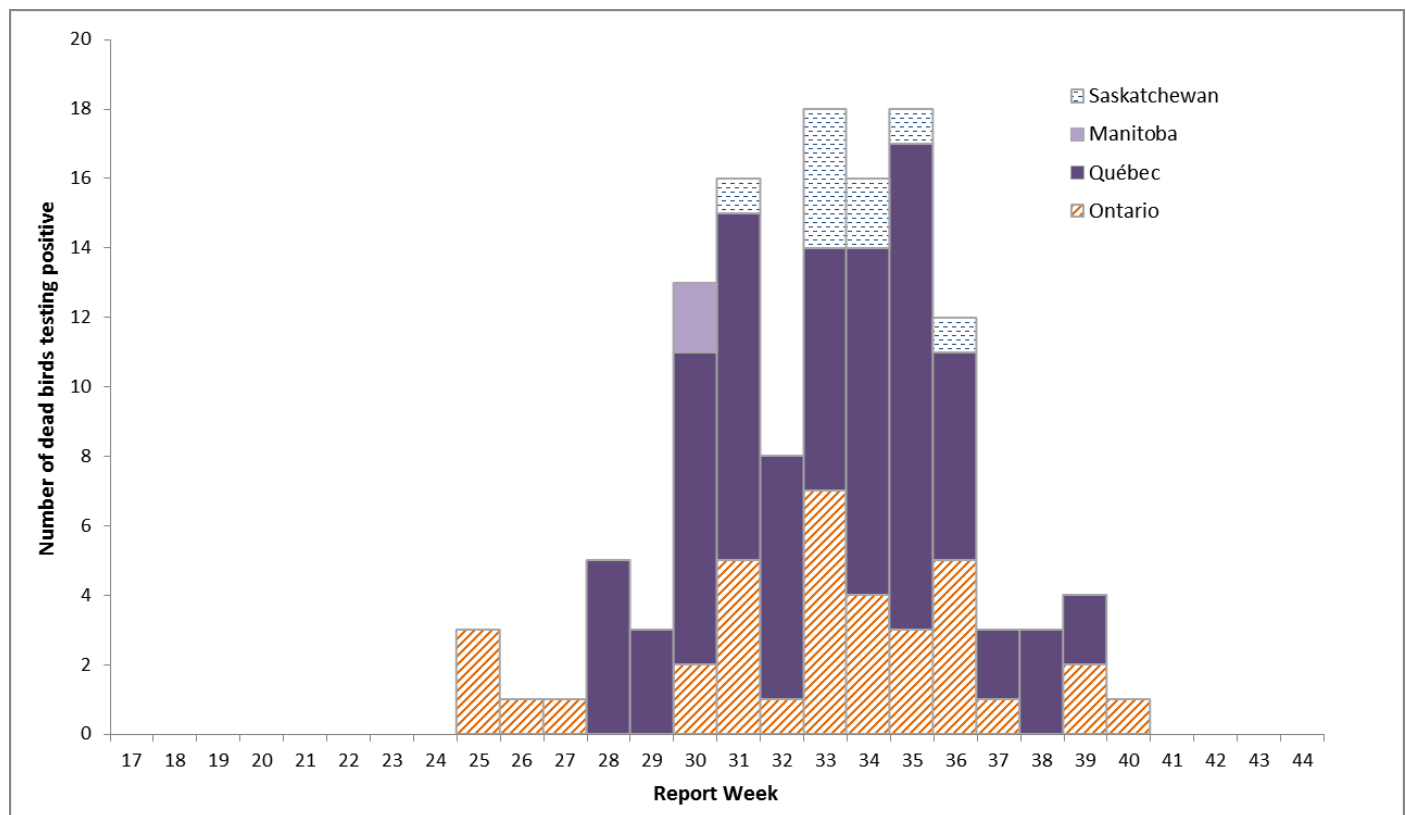

Province / Territory	Year to date: January 1 to October 7, 2017		
	Number of positive mosquito pools	Number of mosquito pools tested	Percentage of positive mosquito pools (%)
Québec	84	1,849	4.54
