

# West Nile virus and Other Mosquito-borne Diseases National Surveillance Report October 8 to October 14, 2017 (Week 41)

### **West Nile Virus**

#### Canada

#### Humans

During week 41, October 8 to October 14, 2017, no new cases of West Nile Virus (WNV) were reported to the Public Health Agency of Canada (PHAC). Retrospectively, seven additional cases were reported by three provinces: two in Québec, four in Ontario and one in Manitoba..

As of week 41, 166 clinical cases and six asymptomatic infections have been reported to the PHAC by five provinces (Québec [15], Ontario [147], Manitoba [4], Alberta [5], and British Columbia [1]). Of the 166 clinical cases, fifty-seven (34%) were classified as WNV neurological syndrome, fifty-four (33%) as WNV Non-neurological syndrome, and thirty-three (33%) as unclassified. A total of 21 travel-related cases were reported. As of October 14, six deaths associated with West Nile virus have been reported to the Public Health Agency of Canada during the 2017 season.

#### **Mosquitoes**

As of initial surveillance, 17,374 mosquito pools have been tested for WNV in Canada: Québec (1,849), Ontario (14,076), Manitoba (1,028), and Saskatchewan (421).

A total of 544 positive pools of WNV have been found in the following four provinces: 409 in Ontario [Brant County (2), Chatham-Kent (3), Durham Region (10), Eastern Ontario (5), Halton Region (36), Hamilton (31), Haliburton-Kwartha-Pine Ridge District (1), Hastings and Prince Edward Countries (13), Huron County (2), Kingston-Frontenac and Lennox and Addington (5), Lambton (2), Leeds, Grenville and Lanark District Health Unit (1), Middlesex-London (7), Niagara Region (15), Northwestern (1), Ottawa (35), Oxford County (1), Peel (114), Perth District (6), Peterborough County-City (2), Renfrew County and District (2), Simcoe Muskoka District (2), Toronto (62), Waterloo (3), Wellington-Dufferin-Guelph (3), Windsor-Essex County (29), and York Regional (16)]; forty-one in Manitoba[(Winnipeg (13), Southern (5), Interlake Eastern (7), and Prairie Mountain (16)]; eighty-four in Québec [Capitale-Nationale (9), Mauricie et du Centre-du-Québec (6), Montréal (10), Outaouais (3), Laval (5), Lanaudière (9), Laurentides (42)]; and ten in Saskatchewan.

#### Birds

As of week 41, the Canadian Wildlife Health Cooperative has tested 192 dead birds for WNV (Northwest Territories [1], Prince Edward Island [1], Quebec [105], Ontario [64], Saskatchewan [16], Manitoba [2], Alberta [1], and British Columbia [2]). Of these, 130 were positive: eighty in Quebec, two in Manitoba, thirty-eight in Ontario, and ten in Saskatchewan.

#### **Domestic Animals**

The Canadian Food Inspection Agency has reported forty-nine horses with WNV infection in the following six provinces: Québec (7), Ontario (19), Manitoba (1), Saskatchewan (8), Alberta (10), and British Columbia (4).

#### **United States and U.S. territories**

As of October 17, 2017, 1,502 human cases of WNV have been reported by the Centers for Disease Control and Prevention. Of these, 987 (66%) were classified as neuroinvasive disease and 515 (34%) as non-neuroinvasive disease. Eighty-six deaths have been reported during the season. In addition, 202 presumptive viremic blood donors have been identified.

#### **Europe and Neighbouring Countries**

As of October 13, 2017, the European Centre for Disease Prevention and Control reported a total of 252 (confirmed and probable) cases of West Nile fever (Austria [4], Bulgaria [1], Croatia [5], Greece [47], Hungary [19], Israel [17], Italy [53], Romania [60], and Serbia [46]). http://ecdc.europa.eu/en/healthtopics/west\_nile\_fever/West-Nile-fever-maps/pages/index.aspx

## Other Mosquito-borne Diseases

## Canada

## Eastern Equine Encephalitis virus

No human cases of eastern equine encephalitis virus (EEEV) have been reported to the Public Health Agency of Canada in 2017. There have been no reports of horses testing positive for EEEV; however, there has been one horse reported with eastern equine encephalitis virus, from Ontario.

## California Serogroup virus

Since January 1, 2017, forty-five human cases of laboratory-confirmed cases/exposures of California serogroup virus were diagnosed by the National Microbiology Laboratory in Canada: British Columbia (1), Alberta (5), Saskatchewan (5), Manitoba (1), Ontario (1), Quebec (27), New Brunswick (3), and Nova Scotia (2). Of these cases, twenty-seven were further classified as Jamestown Canyon virus and one Snowshoe hare virus.

FIGURE 1: Geographic distribution of WNV human cases in Canada, as of October 14, 2017

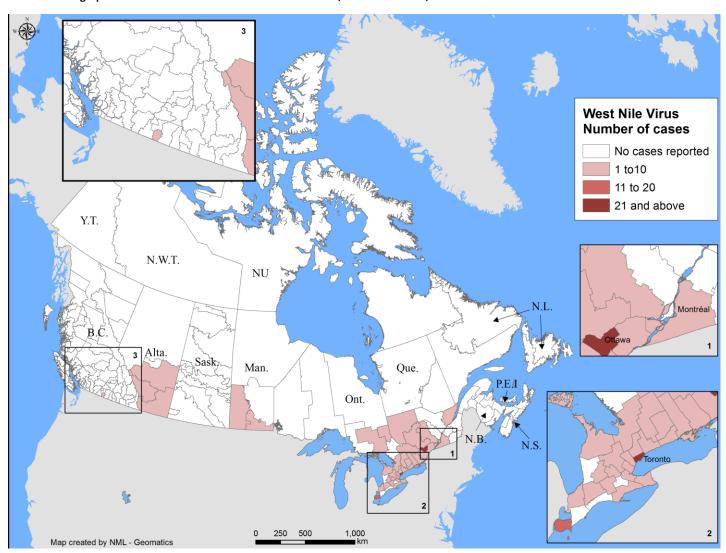

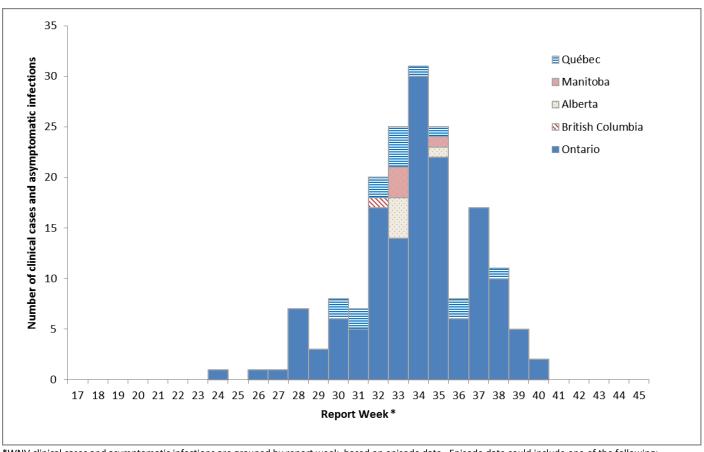

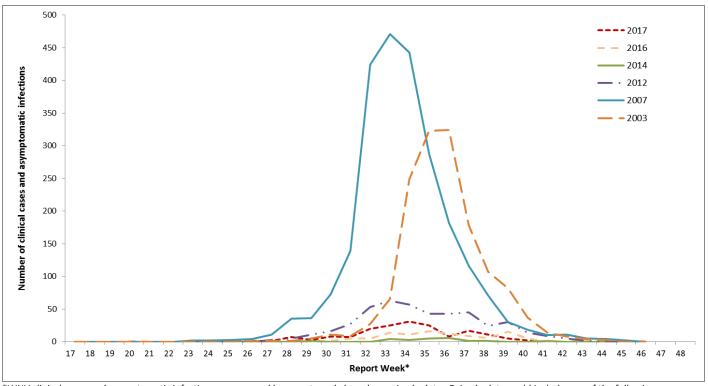

FIGURE 2: West Nile Virus human clinical cases and asymptomatic infections by province/territory as of October 14, 2017

<sup>\*</sup>WNV clinical cases and asymptomatic infections are grouped by report week, based on episode date. Episode date could include one of the following: onset date, diagnosis date, lab sample date or reporting date.

FIGURE 3: West Nile Virus human clinical cases and asymptomatic infections for selected years, in Canada

<sup>\*</sup>WNV clinical cases and asymptomatic infections are grouped by report week, based on episode date. Episode date could include one of the following: onset date, diagnosis date, lab sample date or reporting date.

<sup>&</sup>lt;sup>1</sup> Total clinical cases are the sum of confirmed and probable: WNV neurological and non-neurological syndromes, along with any unclassified or unspecified cases.

<sup>&</sup>lt;sup>2</sup> Likely related to travel outside the Province/Territory. These cases are included in either the total clinical cases or WNV asymptomatic infections

Satisfies WNV diagnostic test criteria in the absence of clinical criteria. This category could include asymptomatic blood donors whose blood is screened using a nucleic acid amplification test, by blood operators (i.e. Canadian Blood Services or Hema-Quebec) and is subsequently brought to the attention of public health officials. Blood operators in Canada perform a supplementary WNV specific nucleic acid amplification test following any positive donor screen test result.

<sup>&</sup>lt;sup>4</sup> Saskatchewan provides counts of WNV neurological syndrome cases only.

<sup>†</sup> Detailed West Nile Virus mosquito surveillance data can be accessed through provincial/territorial websites

FIGURE 4: Reported number of dead birds tested positive for WNV by province/territory and by report week, 2017 season in Canada<sup>1</sup>

Not all provinces are conducting dead bird surveillance as part of their own WNV surveillance program. However, WNV positive dead birds may be identified through the National Wildlife Disease Surveillance Program of the Canadian Wildlife Health Cooperative.

FIGURE 5: Percentage of dead birds tested positive for WNV by report week in 2012, 2015, 2016, 2017 and number of dead birds tested positive, by report week, 2017, in Canada<sup>1</sup>

<sup>&</sup>lt;sup>1</sup> Not all provinces are conducting dead bird surveillance as part of their own WNV surveillance program. However, WNV positive dead birds may be identified through the National Wildlife Disease Surveillance Program of the Canadian Wildlife Health Cooperative.
