## AVANT-PROPOS

Cette bibliographie a été préparée afin de répondre à deux objectifs: mettre à la disposition du public et de la communauté scientifique autant d'informations que possible sur le problème des précipitations acides et faciliter l'accès à la collection de documents, sans cesse croissante, dont dispose la Direction générale des eaux intérieures dans la région du Québec.

Par rapport à l'édition précédente, soit celle d'avril 1983, celle-ci comporte un ajout de quelque 267 références et compte au-delà de 1000 titres. Ces références bibliographiques sont classées selon sept (7) catégories subdivisées en plusieurs sous-catégories et les documents traitant de plusieurs aspects sont cités à l'intérieur de chacune des catégories concernées.

Comme elle a d'abord été conçue pour satisfaire les besoins des scientifiques de la Direction générale des eaux intérieures, la présente publication n'a pas la prétention d'être exhaustive. Nous tentons cependant de repérer et d'intégrer à notre documentation autant de références que possible et nous nous proposons de publier régulièrement une version révisée de la bibliographie.

Dans le but de garantir la disponibilité des documents, seule la consultation sur place est autorisée. Nous tenons enfin à remercier Lise Martin et Jean-Yves Charette de la Direction générale des eaux intérieures pour leur précieuse collaboration lors de la réalisation de ce document.

## FOREWORD

This bibliography has been prepared with two purposes in mind: firstly, to make as much information as possible on the subject of acid precipitation available to the general public and to the scientific community; secondly, to provide easier accessibility to the ever-expanding collection of documents available in the Quebec Regional Office of the Inland Waters Directorate..

Compared to the April 1983 edition, this version contains over 1000 references of which 267 are new. As in previous editions, references are divided into seven (7) sections which are in turn, subdivided. Documents concerned with more than one aspect are referred into each of the relevant categories.

Originally designed to fulfil the needs of our scientists, this bibliography is by no means exhaustive. We have, however, attempted to integrate as many documents as possible into our collection and intend to publish an updated version of this document on a regular basis.

To insure continued availability, all documents are only available for consultation on the premises. Finally, we would like to thank Lise Martin and Jean-Yves Charette of the Inland Waters Directorate for their collaboration in the preparation of this document.
