"Due to strong demand, the vacancy rate in the Montréal area decreased in 2017 to 2.8%. The change in the average rent, for its part, was about 2%."

Geneviève Lapointe Principal, Market Analysis

\*CMHC collects data on the primary and secondary rental market annually, in the fall. These data refer to the primary rental market, which only includes rental units in privately-initiated apartment structures containing at least three rental units. The secondary rental market covers rental dwellings that were not originally purpose-built for the rental market, including rental condominiums. The primary vacancy rate and rent level is based on all surveyed structures, while the rent increase is based only on structures common to the survey sample in both the current and previous year.

#### **Highlights:**

- The vacancy rate decreased in 2017, settling at 2.8%.
- The vacancy rate was on the decline on the Island of Montréal, in Laval and on the South Shore.
- The estimated change in the average rent in the Montréal CMA was around 2%.
- The rental condominium vacancy rate was 1.8%, a decrease compared to 2016.

## The vacancy rate fell to 2.8% in the Montréal CMA in 2017

According to the results of Canada Mortgage and Housing Corporation's (CMHC) Rental Market Survey, the vacancy rate in the Montréal area decreased in 2017, settling at 2.8% (compared to 3.9% in 2016). From a historical perspective, this is the largest such decrease observed on the Montréal market since the early 2000s.

The tightening of the rental market is attributable to rental demand that clearly increased at a faster pace than supply over the period October 2016 to October 2017.

Demand was sustained mainly by net migration, which increased<sup>1</sup> between the last two surveys. Indeed, the data indicate a marked rise in net international migration, particularly in the non-permanent resident category<sup>2</sup>, as well as a slight decrease in the interprovincial migration deficit. It is plausible that most non-permanent residents, such as foreign students and temporary workers, choose the rental market upon their

arrival, which would greatly stimulate rental demand. The arrival of refugees in Montréal over the last few months has likely also contributed to supporting demand.

It is also possible that the recent strength of the Montréal job market<sup>3</sup> spurred greater migration of Quebec households to the Montréal CMA, which would have had the effect of boosting rental demand. Data on interregional migration from the Institut de la statistique du Québec (ISQ) that will be released next year will allow this hypothesis to be confirmed or rejected.

In addition to the abovementioned factors, demand for rental apartments in 2017 was also affected by a decrease in movement to homeownership among Montréal households aged 15 to 24,4 a decrease that could well continue over the next few years. Indeed, while the

proportion of renters within this group of households showed a consistent decrease from 1996 to 2011, the recently released data from the 2016 Census indicate that this proportion has increased. The rise in the number of young households that are now turning toward the rental market is resulting in greater support for demand in this segment than before. The same could be said, though to a lesser degree, about households aged 25 to 34.

\*Private Structures with Three or More Apartments

Net international and interprovincial migration to the province increased by about 9,000 people from July 2016 to June 2017. The Montréal CMA generally collects about 60% of this increase.

<sup>&</sup>lt;sup>2</sup> Source: Statistics Canada. From July 2016 to June 2017, the number of non-permanent residents received by Quebec practically doubled, reaching 11,000 (5,400 from July 2015 to June 2016).

<sup>&</sup>lt;sup>3</sup> According to our latest forecasts, employment in the Montréal area should grow by 3.7% in 2017.

<sup>&</sup>lt;sup>4</sup> Source: Statistics Canada, censuses from 1996 to 2016 and 2011 National Household Survey CMHC calculations.

Supply recorded a significant increase, as around 4,300 units were added to the rental stock since the last survey<sup>5</sup>. This number is well above average when compared to recent years. The addition of a relatively large number of units to the conventional rental stock over the last few years is a result of, among other things, the new condominium market running out of steam and the interest shown by certain developers in the supply of units geared toward the aging population. For these reasons, some builders opted to build rental units.

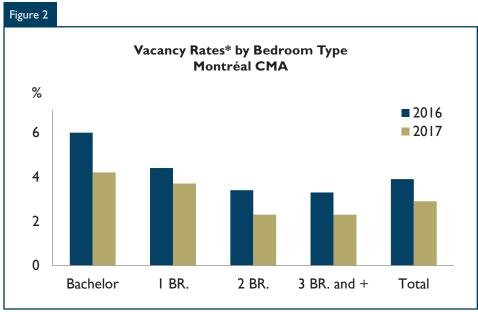

## The vacancy rate decreased in several sectors of the CMA

Between October 2016 and October 2017, the vacancy rates of Laval, the Island of Montréal and the South Shore all posted decreases. In Laval, the rate is now 2.1%, while, in the other two sectors, it is 2.9%.

The fact that a large proportion of the migrants who move to the CMA often settle in one of these three sectors (especially the Island) very likely contributed to the decrease in the vacancy rates. On the North Shore, the vacancy rate went from 3.2% to 2.5% from 2016 to 2017. This difference, however, was not statistically significant.

### The tenant turnover rate<sup>6</sup> remained stable in 2017

According to data from our most recent survey, nearly one in five renter households (17%) in the

Source: CMHC

\*Private Structures with Three or More Apartments

Montréal CMA had moved into a new apartment within the last 12 months. This rate is relatively similar to last year's, and remains slightly higher than those observed in Toronto (14.5%) and Vancouver (13.9%). The scarcity of rental apartments in those two centres, reflected in their vacancy rates near 1%, likely limits household mobility between rental properties.

As was the case last year, of all the geographic zones in the Montréal CMA, Downtown Montréal<sup>7</sup> had the highest turnover rate, at 27%. This sector probably receives a large share of high-mobility tenants, such as students and temporary workers. In the other large sectors of the CMA, the turnover rate was within a 15% to 19% range, which is similar to what was recorded last year.

## Rents in the Montréal CMA increased by about 2% in 2017

Between the last two CMHC rental market surveys (those from 2016 and 2017), the estimated change in the average rent<sup>8</sup> in the Montréal CMA was around 2%. This figure was roughly the same for all apartment types and over all the large sectors<sup>9</sup> of the CMA.

The average monthly rent for two-bedroom apartments in the Montréal area was \$782 in 2017. At \$800, the average rent for two-bedroom apartments on the Island of Montréal was higher than in all other sectors of the CMA. In the suburban sectors, this average rent was in the \$725 to \$750 range. It should be noted that the average rent for apartments with

<sup>&</sup>lt;sup>5</sup> From July 2016 to June 2017. Only properties that were open in June 2016 were included in the 2017 Survey.

<sup>&</sup>lt;sup>6</sup> A unit is counted as being turned over if a new tenant moved in during the past 12 months. A unit can be counted as being turned over more than once in a 12-month period. This includes tenants who moved into a different unit in the same building during this period.

<sup>&</sup>lt;sup>7</sup> This sector also includes Île-des-Sœurs.

When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both the 2016 and 2017 Fall Rental Market Surveys, we can get a better indication of actual rent increases paid by most tenants.

<sup>&</sup>lt;sup>9</sup> Montréal, Laval-North Shore, South Shore and Vaudreuil-Soulanges.

three or more bedrooms on the Island of Montréal exceeded \$1,000 for the first time.

## The vacancy rate decreased for rental condominiums

The vacancy rate on the rental condominium market fell markedly, settling at 1.8% (compared to 3.1% in 2016). This decrease is evidence of the appeal of rental condominiums.

Just as with the conventional rental market, the growth in demand for rental condominiums stems from increased net migration, especially among non-permanent residents. It should also be noted that a greater number of young households are choosing to rent, rather than purchase, housing. A certain proportion of these renters opts for rental condominiums instead of conventional rental apartments. They are probably attracted to more recently constructed buildings that

offer various services to residents. These buildings are also sometimes located conveniently close to employment hubs. And, a significant proportion of the condominium stock is made up of buildings that were constructed relatively recently.

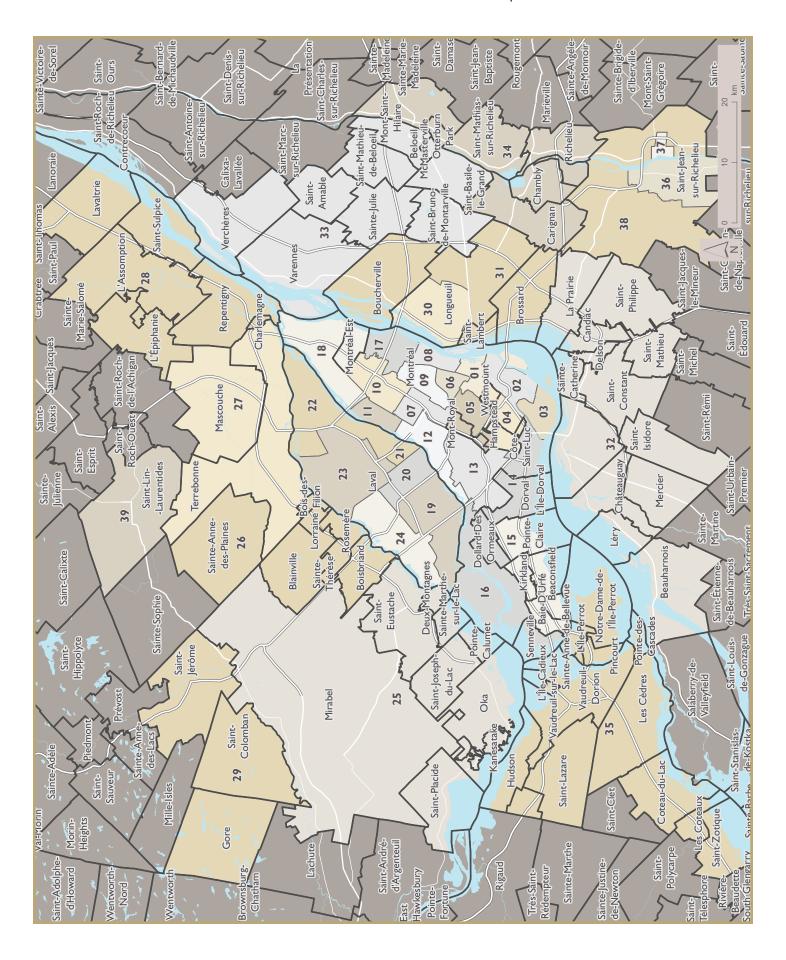

Supply, for its part, again increased significantly over the course of the last year. Indeed, over 3,700 new units were added to the CMA's rental condominium stock, which represents an increase of 13%.

All in all, a number of factors acting in tandem had a major impact on demand, which more than compensated for the increase in supply.

The average rent for a two-bedroom condominium, at \$1,180, was significantly higher than the average rent for a conventional rental apartment with the same number of bedrooms (\$782).

Just as for conventional rental units, the vacancy rate fell markedly in Laval and on the South Shore. In these sectors, the vacancy rates were 1.0% and 0.7%, respectively. In the Downtown–Île-des-Sœurs sector, the vacancy rate, at 2.2%, remained stable relative to 2016.

Once again, it was in the Downtown–Île-des-Sœurs sector that the proportion of condominiums available for rent was highest. Indeed, about one quarter of condominiums in the sector was available for rent, compared to 17%, on average, for the entire CMA. The proportion of condominiums available for rent was also relatively high in Laval (23.7%) and in Vaudreuil-Soulanges (22.9%). This proportion is increasing gradually from one year to the next in the CMA.

#### TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

#### METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey** (RMS) every year in October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent levels, availability (outside Quebec), turnover and vacancy unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy, availability (outside Quebec), and turnover rates and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of percent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports. The rent levels in new and existing structures are also published. While the percent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

#### METHODOLOGY FOR CONDOMINIUM APARTMENT SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the Condominium Apartment Survey (CAS) in late summer and early fall to estimate the relative strengths in the condo apartment rental market The CAS collects the number of units being rented out and the vacancy and rent levels of these units in the following CMAs: Calgary, Edmonton, Gatineau, Halifax, Hamilton, Kelowna, Kitchener, London, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, Victoria and Winnipeg. The CAS is conducted by telephone interviews and information is obtained from the property management company, condominium (strata) board, or building superintendent. If necessary, this data can be supplemented by site visits if no telephone contact is made.

CMHC publishes the number of units rented, vacancy rates and average rents from the Condominium Apartment Survey. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

## RENTAL MARKET SURVEY (RMS) AND CONDOMINIUM APARTMENT SURVEY (CAS) DATA RELIABILITY

CMHC does not publish an estimate (e.g. Vacancy Rates and Average Rents) if the reliability of the estimate is too low or the confidentiality rules are violated. The ability to publish an estimate is generally determined by its statistical reliability, which is measured using the coefficient of variation (CV). CV of an estimate is defined as the ratio of the standard deviation to the estimate and CV is generally expressed a percentage. For example, let the average rent for one bedroom apartments in a given CMA be  $\bar{x}$  and its standard deviation be  $\sigma_{\bar{x}}$ . Then the Coefficient of Variation is given by  $CV = \frac{\sigma_{\bar{x}}}{\bar{z}}$ .

#### **Reliability Codes for Proportions**

CMHC uses CV, sampling fraction and universe size to determine the ability to publish proportions such as vacancy rates, availability rates and turnover rates. The following letter codes are used to indicate the level of reliability of proportions:

- a Excellent
- b Very good
- c Good
- d Fair (Use with Caution)
- \*\* Poor Suppressed
- ++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- - No units exist in the universe for this category
- n/a Not applicable

Vacancy Bata 0

The following two tables indicate the level of reliability of proportions:

If the proportion is Zero (0) and sampling fraction is less than 100% then the following levels are assigned:

#### Sampling Fraction (%) range

Structures in Universe	e <b>(0,20]</b> *	(20,40]	(40,60]	(60,80]	(80,100)
3 – 10	Poor	Poor	Poor	Poor	Poor
11 – 20	Poor	Fair	Fair	Fair	Good
21 - 40	Poor	Fair	Fair	Good	Very Good
41 - 80	Poor	Fair	Good	Good	Very Good
81+	Poor	Good	Good	Very Good	Very Good

<sup>\*(0, 20]</sup> means sampling fraction is greater than 0% but less than or equal to 20%; others are similar.

Otherwise, the following table is used to determine the reliability level of proportions:

#### Coefficient of Variation (CV) %

vacancy Kate	U	(0,5]	(5,10]	(10,10.5]	(10.5,33.3]	(33.3,30]	<b>5</b> 0 <b>T</b>
(0,0.75]	Excellent	Excellent	Excellent	Excellent	Excellent	V. Good	V. Good
(0.75,1.5]	Excellent	Excellent	Excellent	Excellent	Excellent	Fair	Poor
(1.5,3]	Excellent	Excellent	Excellent	V. Good	Good	Poor	Poor
(3,6]	Excellent	Excellent	V. Good	Good	Fair	Poor	Poor
(6,10]	Excellent	Excellent	V. Good	Good	Poor	Poor	Poor
(10,15]	Excellent	Excellent	Good	Fair	Poor	Poor	Poor
(15,30]	Excellent	Excellent	Fair	Poor	Poor	Poor	Poor
(30,100]	Excellent	Excellent	Poor	Poor	Poor	Poor	Poor

/IN I 4 ET /I 4 E 22 27 /22 2 ENT ENT

#### **Reliability Codes for Averages and Totals**

CMHC uses the CV to determine the reliability level of the estimates of average rents and a CV cut-off of 10% for publication of totals and averages. It is felt that this level of reliability best balances the need for high quality data and not publishing unreliable data. CMHC assigns a level of reliability as follows (CV's are given in percentages):

- a If the CV is greater than 0 and less than or equal to 2.5 then the level of reliability is Excellent.
- b If the CV is greater than 2.5 and less than or equal to 5 then the level of reliability is **Very Good**.
- c If the CV is greater than 5 and less than or equal to 7.5 then the level of reliability is **Good**.
- d If the CV is greater than 7.5 and less than or equal to 10 then the level of reliability is Fair.
- \*\* If the CV is greater than 10 then the level of reliability is **Poor**. (Do Not Publish)

#### **Arrows indicate Statistically Significant Changes**

Use caution when comparing statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. When applicable, tables in this report include indicators to help interpret changes:

- ↑ indicates the year-over-year change is a statistically significant increase.
- ↓ indicates the year-over-year change is a statistically significant decrease.
- indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.
- $\Delta$  indicates that the change is statistically significant

#### **DEFINITIONS**

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

**Turnover:** A unit is counted as being turned over if it was occupied by a new tenant moved in during the past 12 months. A unit can be counted as being turned over more than once in a 12 month period.

#### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 50,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2016 data is based on Statistics Canada's 2011 Census area definitions. October 2017 data is based on Statistics Canada's 2016 Census area definitions.

#### **Acknowledgement**

The Rental Market Survey and the Condominium Apartment Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution CMHC is able to provide information that benefits the entire housing industry.

#### CMHC HELPS CANADIANS MEET THEIR HOUSING NEEDS.

Canada Mortgage and Housing Corporation (CMHC) has been helping Canadians meet their housing needs for more than 70 years. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer unbiased housing research and advice to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.

For more information, visit our website at www.cmhc.ca or follow us on Twitter, LinkedIn, Facebook and YouTube.

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274. Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.
