Vacancy Rate	Vacancy Rate	Vacancy Rate	Vacancy Rate
\$627 Avg. Rent	\$765 Avg. Rent	\$934 Avg. Rent	\$1,037 Avg. Rent

“Vacancy rates in the Abbotsford-Mission CMA are below 1%, as higher migration and employment boosted demand for rental accommodations.”

Eric Bond
Principal, Market Analysis (Vancouver)

*CMHC collects data on the primary and secondary rental market annually, in the fall. These data refer to the primary rental market, which only includes rental units in privately-initiated apartment structures containing at least three rental units. The secondary rental market covers rental dwellings that were not originally purpose-built for the rental market, including rental condominiums. The primary vacancy rate and rent level is based on all surveyed structures, while the rent increase is based only on structures common to the survey sample in both the current and previous year.

Key Analysis Findings

- A shrinking rental universe combined with higher migration and employment contributed to the vacancy rate falling to 0.2%.
- The average apartment rent increased by 2.5% between 2016 and 2017.
- Rising home prices in the Vancouver and Abbotsford-Mission CMAs have constrained some potential homebuyers to rent longer in order to save for a down payment, contributing to rental demand.
- While new home construction starts have exceeded 1,500 units this year, as of October 2017, only 264 are being constructed for primary rental purposes.

Vacancy rates remain low across the Abbotsford-Mission CMA

The vacancy rate¹ in the Abbotsford-Mission Census Metropolitan Area (CMA) decreased to 0.2% from 0.5% a year prior. Vacancy rates have been trending downwards since October 2011, as improvements in the local economy have contributed to rental demand while supply growth has been weak. In particular, the City of Mission's rental market became significantly tighter in 2017, as the total vacancy rate decreased from 1.2% to 0.6%.

Increased household growth from migration has fueled rental demand

Increased migration into the Abbotsford-Mission CMA has further bolstered rental demand in 2017, as

migrants moving to a new region typically rent for a period of time before making a decision to buy a home. While international migration has historically been the leading component for population growth in Abbotsford-Mission, recent increases in interprovincial and intraprovincial migration have further amplified rental demand. The larger number of interprovincial migrants can be attributed in part to a higher number of Albertan households choosing to relocate to BC, as a result of the deterioration of Alberta's economy that occurred in 2015 and 2016 due to a fall in oil prices.

In terms of intraprovincial migration, rising home prices across the Vancouver and Abbotsford-Mission CMAs have had a two-fold effect on the rental market. As home prices and rents have increased significantly faster than incomes in the Vancouver CMA, many families have moved to the Abbotsford-Mission CMA where housing is more affordable. However, home prices in the Abbotsford-Mission CMA have also been trending upwards, which has constrained some

potential homebuyers and resulted in them remaining in the rental market longer in order to save for a down payment. In total, Abbotsford-Mission added approximately 877 households between 2016 and 2017², of which 249³ were likely to be rental households.

Favourable labour market conditions continue to support the rental market

Favourable labour market conditions in the Abbotsford-Mission CMA have also been supportive of the rental market. As of October 2017, the unemployment rate was 5.2%, with total employment reaching 93,600

Figure 1

¹ For rental apartment structures with 3 or more units

² BC Stats P.E.O.P.L.E 2017; figures are as of July 1st of the year stated

³ The 2016 Census revealed that approximately 28% of all private households in the Abbotsford-Mission CMA were renter households

Figure 2

Source: Statistics Canada, seasonally adjusted CANSIM table 051-0057

*Based on preliminary data

compared to 6.3% and 92,600, respectively, from the same month last year⁴. During this time period, full-time employment among young adults (ages 15-24) grew by 2.3%. Better employment conditions for young adults can affect the rental market as it creates more opportunities for them to move out of their parental homes and form their own households. Many first seek rental accommodations in order to save money for a down payment on a property.

A shrinking primary rental universe has tightened the rental market

Despite improvements in local economic fundamentals and evidence pointing to increased rental demand, the purpose-built rental universe in the Abbotsford-Mission CMA decreased by 14 units due to demolitions and renovations. Despite 264 new rental units getting underway in the first 10 months of 2017, recent residential development

has been strongly focussed on apartment condominiums, which have seen over 1,500 starts in the same period. As a result, renters may have to seek out units listed on the secondary rental market by individual investors in order to find more rental options.

Average rent increases were below the province's maximum allowable rent increase for 2017

The average same sample rent increase for private apartments was 2.5% between 2016 and 2017, compared with 4.9% between 2015 and 2016⁵. Even though the province's maximum allowable rent increase was set at 3.7%⁶ for 2017, not all landlords took full advantage of this opportunity. In fact, renters in the City of Mission only faced an average rent increase of 1.1% despite the very tight primary rental market. These lower rent increases may have influenced renters to stay longer in their current units, as the turnover rate in the Abbotsford-Mission CMA decreased to 17.9%, a decline of 2.1 percentage points from the year before.

⁴ Statistics Canada CANSIM, seasonally adjusted, table 282-0135

⁵ When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2016 and 2017 Fall Rental Market Surveys, we can get a better indication of actual rent increases paid by most tenants

⁶ Residential Tenancies Branch, BC

Vacant units are being offered at above average rents

Apartment units in the Abbotsford-Mission CMA that were vacant at the time of the survey were asking for an average rent of \$1,014, which represents the marginal rate that prospective tenants would currently face in the market. Based on the survey results, these units fall within the top quintile of rents (above \$950), suggesting continued upward pressure on average rents, given the strong demand and low supply rental market conditions in Abbotsford-Mission.

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent levels, availability (outside Quebec), turnover and vacancy unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy, availability (outside Quebec), and turnover rates and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of percent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports. The rent levels in new and existing structures are also published. While the percent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR CONDOMINIUM APARTMENT SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the Condominium Apartment Survey (CAS) in late summer and early fall to estimate the relative strengths in the condo apartment rental market. The CAS collects the number of units being rented out and the vacancy and rent levels of these units in the following CMAs: Calgary, Edmonton, Gatineau, Halifax, Hamilton, Kelowna, Kitchener, London, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, Victoria and Winnipeg. The CAS is conducted by telephone interviews and information is obtained from the property management company, condominium (strata) board, or building superintendent. If necessary, this data can be supplemented by site visits if no telephone contact is made.

CMHC publishes the number of units rented, vacancy rates and average rents from the Condominium Apartment Survey. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

RENTAL MARKET SURVEY (RMS) AND CONDOMINIUM APARTMENT SURVEY (CAS) DATA RELIABILITY

CMHC does not publish an estimate (e.g. Vacancy Rates and Average Rents) if the reliability of the estimate is too low or the confidentiality rules are violated. The ability to publish an estimate is generally determined by its statistical reliability, which is measured using the coefficient of variation (CV). CV of an estimate is defined as the ratio of the standard deviation to the estimate and CV is generally expressed a percentage. For example, let the average rent for one bedroom apartments in a given CMA be \bar{x} and its standard deviation be $\sigma_{\bar{x}}$. Then the Coefficient of Variation is given by $CV = \frac{\sigma_{\bar{x}}}{\bar{x}}$.

Reliability Codes for Proportions

CMHC uses CV, sampling fraction and universe size to determine the ability to publish proportions such as vacancy rates, availability rates and turnover rates. The following letter codes are used to indicate the level of reliability of proportions:

a — Excellent

b — Very good

c — Good

d — Fair (Use with Caution)

** — Poor — Suppressed

++ — Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

- — No units exist in the universe for this category

n/a — Not applicable

The following two tables indicate the level of reliability of proportions:

If the proportion is Zero (0) and sampling fraction is less than 100% then the following levels are assigned:

Sampling Fraction (%) range

Structures in Universe	(0,20]*	(20,40]	(40,60]	(60,80]	(80,100)
3 – 10	Poor	Poor	Poor	Poor	Poor
11 – 20	Poor	Fair	Fair	Fair	Good
21 – 40	Poor	Fair	Fair	Good	Very Good
41 – 80	Poor	Fair	Good	Good	Very Good
81+	Poor	Good	Good	Very Good	Very Good

*(0, 20] means sampling fraction is greater than 0% but less than or equal to 20%; others are similar.

Otherwise, the following table is used to determine the reliability level of proportions:

Coefficient of Variation (CV) %

Vacancy Rate	0	(0,5]	(5,10]	(10,16.5]	(16.5,33.3]	(33.3,50]	50+
(0,0.75]	Excellent	Excellent	Excellent	Excellent	Excellent	V. Good	V. Good
(0.75,1.5]	Excellent	Excellent	Excellent	Excellent	Excellent	Fair	Poor
(1.5,3]	Excellent	Excellent	Excellent	V. Good	Good	Poor	Poor
(3,6]	Excellent	Excellent	V. Good	Good	Fair	Poor	Poor
(6,10]	Excellent	Excellent	V. Good	Good	Poor	Poor	Poor
(10,15]	Excellent	Excellent	Good	Fair	Poor	Poor	Poor
(15,30]	Excellent	Excellent	Fair	Poor	Poor	Poor	Poor
(30,100]	Excellent	Excellent	Poor	Poor	Poor	Poor	Poor

Reliability Codes for Averages and Totals

CMHC uses the CV to determine the reliability level of the estimates of average rents and a CV cut-off of 10% for publication of totals and averages. It is felt that this level of reliability best balances the need for high quality data and not publishing unreliable data. CMHC assigns a level of reliability as follows (CV's are given in percentages):

- a — If the CV is greater than 0 and less than or equal to 2.5 then the level of reliability is **Excellent**.
- b — If the CV is greater than 2.5 and less than or equal to 5 then the level of reliability is **Very Good**.
- c — If the CV is greater than 5 and less than or equal to 7.5 then the level of reliability is **Good**.
- d — If the CV is greater than 7.5 and less than or equal to 10 then the level of reliability is **Fair**.
- ** — If the CV is greater than 10 then the level of reliability is **Poor**. (Do Not Publish)

Arrows indicate Statistically Significant Changes

Use caution when comparing statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. When applicable, tables in this report include indicators to help interpret changes:

- ↑ indicates the year-over-year change is a statistically significant increase.
- ↓ indicates the year-over-year change is a statistically significant decrease.
- indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.
- △ indicates that the change is statistically significant

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Turnover: A unit is counted as being turned over if it was occupied by a new tenant moved in during the past 12 months. A unit can be counted as being turned over more than once in a 12 month period.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 50,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

October 2016 data is based on Statistics Canada's 2011 Census area definitions. October 2017 data is based on Statistics Canada's 2016 Census area definitions.

Acknowledgement

The Rental Market Survey and the Condominium Apartment Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution CMHC is able to provide information that benefits the entire housing industry.

CMHC HELPS CANADIANS MEET THEIR HOUSING NEEDS.

Canada Mortgage and Housing Corporation (CMHC) has been helping Canadians meet their housing needs for more than 70 years. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer unbiased housing research and advice to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.
