ALBERTA

Housing Starts

Housing starts in October for both Canada and Alberta increased by approximately 40% from October 1990. However, year-to-date figures for 1991 are still well behind those of last year both nationally (-19.2%) and for Alberta (-36.6%).

Labour Force

While there was a contraction in both the labour force and employment in Alberta from the previous month, unemployment increased by 9,000 in November. Hence, the unemployment rate (unadjusted 3 month moving average) increased sharply to 8.6% from 7.7% in October. Job losses were of a similar magnitude in both the goods-producing and service-producing industries with the fire, insurance and real estate category being the only major industrial group to record an increase in employment. The unemployment rate for Edmonton continued to exceed Calgary's during November (9.5% compared to 8.8%).

Consumer Price Index

The All-items Consumer's Price Index for Alberta showed an annual increase of 4.1% in November. Higher prices for new (1992 model) vehicles, fresh vegetables and beef as well as increased charges for natural gas were major factors in the C.P.I. increase for both Edmonton and Calgary (3.6% and 4.3%) respectively).

Population

Estimates of the 1991 population of Census Metropolitan Areas show that Edmonton and Calgary C.M.A.s account for 63% of Alberta's population.

The growth rate for both Calgary (2.7% since 1990) and Edmonton (2.2%) was above the provincial rate of 2.1%.

MANITOBA

The seasonally adjusted unemployment rate in Manitoba fell to 8.7% in November from 9.4% in October. The November unemployment rate for Winnipeg is 10.2%, down slightly from the 10.6% reported for October. However, the current estimate is 3 percentage points higher than the November 1990 rate of 7.2%.

The unadjusted employment estimate for the province decreased on a monthly basis by 9 000 to 484 000, reflecting a drop of 11 000 in the labour force. As compared to November 1990, the size of the labour force has decreased by 6 000 while 12 000 fewer persons are employed. Virtually all of the monthly decrease in employment was experienced in the service sector, with no significant change reported for the goods-producing sector. Employment in the manufacturing industries also remained unchanged at 55 000.

The November Consumer Price Index for Winnipeg rose 1.0% from October, as a result of advances in six of the seven major component indices. The transportation index was responsible in large part for this increase, reflecting higher prices for gasoline and new 1992 model vehicles. An increase in the food index was also significant, with higher prices recorded for fresh produce, beef, bakery products and restaurant meals. Since November 1990, the All-Items index has risen by 4.1% to 126.2.

The population in Manitoba as of October 01 was 1 096 700, a decrease of 300 from the July 1 estimate. However, this represents an increase of 4 100 from October 1 1990, and an increase of 9 400 from October 1, 1989. The annual growth rates from the years ending September 30, 1991 and 1990 were 0.4% and 0.5% respectively.

Consumer and Corporate Affairs reports that bankruptcies in November for Manitoba declined 8.6% from October to a total of 255. This is a 12.8% increase from a year ago.

SASKATCHEWAN

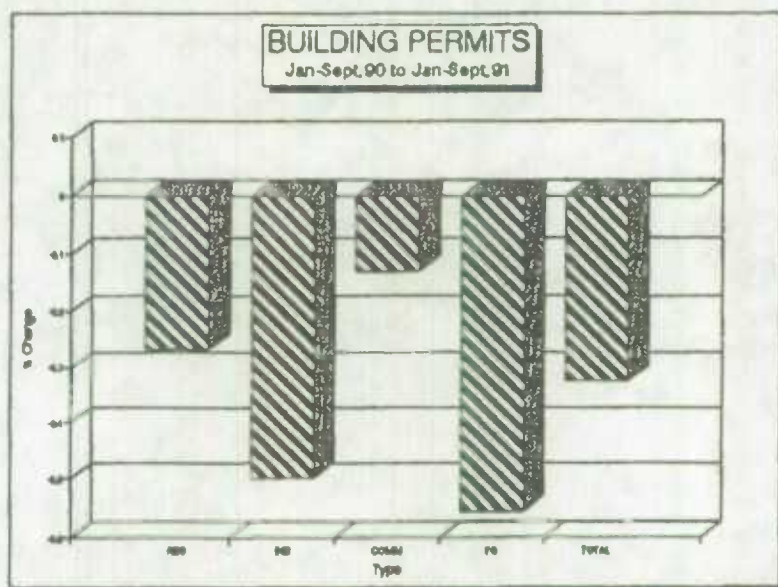

NEW MOTOR VEHICLE SALES

As of the end of September 1991, while new motor vehicle sales were down for the year, in the month of September itself, there was an increase of 18% which was thought to be a turnaround because of the introduction of the 1992 line of vehicles.

The month of October did not sustain the recovery that was hoped. Sales as of the end of October from January 1991 were down 7.5% compared to the same period for 1990.

BUILDING PERMITS

Building permits for January to September, 1991 were down dramatically for the same period of 1990. Residential dropped by 26.6%, Industrial by 49.8%, commercial by 13.1% and Institutional and government by 55.5%. The total drop was 32.4%.

AGRICULTURE

Farm cash receipts for Saskatchewan from January to September, 1991 were down 8.6% compared to the same period for 1990. Even though crop receipts were up 8.3%, livestock was down 3.4% and direct payments were down 106 million dollars (Over -1000%).

LABOUR FORCE

There were 441,000 people employed in Saskatchewan in November, compared to 447,000 November, 1990. There were 2,000 fewer people employed in construction and 1,000 fewer in manufacturing, while there were 2,000 additional people employed in the service sector. There were 34,000 people in the province unemployed and looking for work in November. This compares with the 32,000 in November 1990.

The Saskatchewan unemployment rate for November, 1991 was 7.2% compared to 6.5% for 1990.

DEFINITIONS

LABOUR FORCE: that portion of the civilian non - institutional population 15 years and over who, during the reference week, were employed or unemployed.

EMPLOYED: persons who, during the reference week, did any work at all or had a job but were not at work due to : (1) own illness or disability (2) personal or family responsibilities (3) bad weather (4) labour dispute (5) vacation (6) other reason not specified above (excluding persons on layoff and persons whose job attachment was to a job to start at a definite date in the future).

UNEMPLOYED: persons who, during the reference week, were without work and were available for work, had been on layoff, or had a new job to start in four weeks or less from the reference week.

UNEMPLOYMENT RATE: represents the number of unemployed persons expressed as a percent of the labour force.

PARTICIPATION RATE: represents the labour force expressed as a percentage of the population 15 years of age and over.

EMPLOYMENT/POPULATION RATIO: represents the number of persons employed expressed as a percentage of the population 15 years of age and over.

SA (SEASONALLY ADJUSTED): a seasonally adjusted series is one from which seasonal movement have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, crop cycles, holidays and vacation period. It should be noted that the seasonally-adjusted series contains irregular as well as longer term cyclical fluctuations.
