## INTRODUCTION

**CANSIM\*** (Canadian Socio-economic Information Management System), is Statistics Canada's computerized data base and information retrieval service. The Time Series Database provides detailed and timely statistical information to data users in the private and public sectors in both official languages. In addition to the central facility maintained by Statistics Canada, subsets of the CANSIM Time Series Database are distributed by various commercial service bureaux under license to Statistics Canada, a list is included at the end of this document. The Time Series Database contains a wide variety of data relating to such topics as the System of National Accounts, Labour, Manufacturing, Construction, Trade, Agriculture and Finance. As well, selected demographic and social data, such as population estimates and vital statistics, are available. An intrinsic property of the Time Series Database is that the data are organized according to a hierarchical structure - the highest level of which is the data matrix. Each of the approximately 8,000 matrices on the Database contains individual series which are related to each other in some coherent fashion. Each series represents a concept or variable for which data are stored across time.

The CANSIM Time Series Database is one of several Database systems administered by the Dissemination Division. Socio-economic statistics are available in cross-sectional format on the Cross-Classified Database (XCL), which shows data in multi-dimensional relationships with other data over time. Time series and Census data are also available on CD-ROM.

A keyword searchable version of the CANSIM Time Series Directory is available on the **StatCan: CANSIM Directory Disc**. A one-year subscription with quarterly updates cost \$103 for Canada, (US clients and foreign clients, payable in US\$). The network prices are available on request for the **StatCan: CANSIM Directory Disc**, (US and foreign clients, payable in US\$). For further information please call your nearest Statistics Canada Regional Office. **Free access** to the CANSIM Time Series Directory is available on our Internet site at: <http://www.statcan.ca>. Our Internet version is updated daily. Our premium dial-up service **StatsCan Online**, also offers a version of the CANSIM Series Directory, updated daily. Common components of these detailed listings include: the CANSIM Matrix Number, the Matrix Title, the source of the information contained in the matrix, the Matrix Note, if applicable, which qualifies all or most of the information contained in the matrix; and, a hierarchically arranged listing of series (items) contained in the specific matrix which includes a series number, a series title, the start date of the information in each series, and a unique databank identifier (databank number).

This document, **CANSIM MATRIX DIRECTORY** contains a brief description of the subject matter, a list of contact persons and a listing of the Time Series Database contents at the matrix level. It is sorted alphabetically, as outlined in the Table of Contents. A matrix number followed by a "T" indicates that all series within that matrix have been terminated.

**INQUIRIES LIST** - This list includes the names of Statistics Canada and other agency staff members to contact for questions which may arise about the actual data stored on the CANSIM Time Series Database; questions about terminology, survey coverage and procedures, revision policy, etc. Most other questions, however, can be answered at your nearest Statistics Canada Regional Office and a list of these is also included.

**STATISTICS CANADA PUBLICATIONS REPRESENTED IN CANSIM** - This section lists the catalogue numbers of publications represented in the CANSIM Time Series Database.

## GLOSSARY OF TERMS

**CANSIM - Canadian Socio-economic Information Management System:** Statistics Canada's official vehicle for the dissemination of information in machine-readable form.

**CANSIM Identifiers:** The combination of Matrix and Series numbers to identify series on the CANSIM Time Series Database.

**CANSIM Time Series Database:** The CANSIM Time Series Database contains more than 700,000 time series. This base is updated daily. Release of new data coincides with the official announcement of availability.

**CANSIM Matrix Directory:** A summary guide at the matrix level. The Directory includes an index which serves to identify the matrix and source of the data and other descriptive information for each matrix. The index provides a key to the Directory and is the first step in locating data on the CANSIM Time Series Database.

**Convertible Series:** CANSIM time series available in both imperial and metric units; designated by a "C" at the series level.

**D Number - DATABANK Identifier:** A letter and a number to identify series on the CANSIM Time Series Database.

**Database:** A collection of information stored in electronic form designed to allow for multiple applications to access the data.

**Dissemination Division:** A division of Statistics Canada charged with the public dissemination of business, economic, social and census data in electronic form.

**Distributor:** Privately owned computer service bureau licensed to offer public access to the CANSIM Time Series Database.

**Matrix:** A hierarchical grouping of CANSIM time series of an homogeneous conceptual, methodological and statistical nature; comparable to a table in a publication.

**PS - Part Secure:** This security designation means that some of the time series observations are only available to the public with the approval of the source.

**PU - Public:** This security designation means that the time series is published or publishable and is available to the public.

**Replacement Values:** Datapoints that are secure or not available for the time period requested may be replaced by zeros, or other values to distinguish them from real zeros.

**SE - Secure:** This security designation means that the time series is only available to the public with the approval of the source.

**Series:** A collection of data observations for a particular concept or element; comparable to a column in a table; CANSIM time series are structured in a hierarchical format of totals and sub-totals called matrices.

**Terminated Series:** A terminated series is no longer updated; designated by a "T" at the series level.

### INDUSTRIAL ORGANIZATION AND FINANCE

This section provides data on the Financial Transactions of Industrial Corporations by size and industry as reflected on the balance sheets and statements of income, retained earnings, statement of change in financial position and selected ratios. Statistics are derived from a quarterly survey of financial statements. Similar financial statistics covering Financial Institutions are also included in this section. Data on taxable income, income taxes, and selected capital cost allowances for corporations are available for 37 major industries. There are also data on Government Finance, Employment and Payrolls.

Statistics derived from the application of the Corporations and Labour Union Returns Act, (CALURA) include information on major financial characteristics, degree of concentration and foreign control.

This section also contains the statistics used in the preparation of the Bank of Canada Review, mostly made up of data series on activities of financial institutions and financial markets and some general economic and international statistics.

#### CORPORATIONS AND LABOUR UNIONS RETURNS ACT (CALURA)

Annual (61-210-XPB)

Major Financial Characteristics (sales, assets, equity, profits, and taxable income), and enterprise and corporation counts, for leading enterprises and totals, by control, by industry for each of the years from 1975, based on Table 1 and 6 in the published catalogue. An enterprise is defined as a set of corporations under common control. Further information on the concepts and definitions used are available in the published catalogue, or may be obtained upon request from the Corporations Section, CALURA Industrial Organization and Finance Division. Detailed information on the corporations in specific enterprises may be found in Inter-corporate Ownership (61-517-XPB).

The first set of matrices shows aggregate concentration (the leading 25, 100, and 500 enterprises) and the impact of foreign controlled, Canadian private, and Canadian government enterprises. Leading enterprises were determined by aggregating sales of subsidiary corporations in non-financial industries. The impact of these leading enterprises within each of the nine industry divisions is also shown.

## INVESTMENT AND CAPITAL STOCK

Construction statistics cover a wide spectrum of data, from the measure of output of the construction industry at its most aggregate level (National Wealth and Capital Stock) on through to its inputs (building materials) at a more detailed level. National Wealth and Capital Stock include annual estimates of the stocks and flows of fixed non-residential capital in Canada by major industries both in constant and current dollar valuation. Capacity Utilization Rates in manufacturing comparing output with capacity are available by major S.I.C. industry groups. Annual estimates of Capital and Repair Expenditures on construction for up to 70 different structure types, by province and industrial sector, are included. The results of the Investment Intentions Survey from about 22,000 respondents in Canadian businesses, institutions and others provide the estimates for total outlay for construction and for acquisition of producers' machinery and equipment. Housing starts, building permits and shipments of building materials complete the offering.

## INVESTMENT AND CAPITAL STOCK

## 1. NATIONAL WEALTH AND CAPITAL STOCK 1970 SIC

These series represent annual estimates of the stocks and flows of fixed non-residential capital in Canada beginning with the year 1926. The data are published in Fixed Capital Flows and Stocks, (13-568-XPB), occasional. The perpetual inventory method, which underlies the present estimates, uses annual investment expenditures, price deflators and estimates of service lives of the assets. The investment expenditures include adjustments and historical revisions made in the National Accounting System. The gross capital stock estimates are obtained by accumulating past investment expenditures less cumulative discards. Net stocks are calculated by adjusting the gross stocks for the physical deterioration and obsolescence they undergo during their service lives.

A comprehensive description of the perpetual inventory method is given in Fixed Capital Flows and Stock - Manufacturing Canada 1926-1960: Methodology (13-522-XPB), Occasional. The series are given by major industries according to the 1970 S.I.C., in constant 1986 and current dollar valuation covering the following detailed types of components:

1. Building Construction
2. Engineering Construction
3. Machinery and Equipment
4. Capital Items Charged to Operating Expenses
5. Total Components

The component series are presented for the following categories of data:

1. Gross Fixed Capital Formation
2. Discards
3. End-Year Gross Stock
4. Geometric Capital Consumption Allowances
5. Geometric End-Year Net Stock
6. Straight-Line Capital Consumption Allowances
7. Straight-Line End-Year Net Stock

## 2. CAPACITY UTILIZATION RATES IN CANADIAN MANUFACTURING, (31-003-XPB)

The definition of capacity in this procedure is the maximum output obtainable under normal technological and market conditions. The methodology used to produce these indexes is based on a comparison of the actual output of an industry during a certain time period with the estimated capacity output during that period. The estimated capacity output is based on a capacity capital-output ratio derived from the industry's gross stock of fixed capital, measured in 1986 or 1971 dollars. These capital stock estimates are produced by the National Wealth and Capital Stock Section of The Investment and Capital Stock Division of Statistics Canada. For concepts and detailed methodology, refer to Capacity Utilization Rates in Canadian Manufacturing, (31-003-XPB), Quarterly. The capacity utilization rates are given by major group according to the 1980 Standard Industrial Classification, from 1971 quarterly.

## 3. CAPITAL AND REPAIR EXPENDITURES ON CONSTRUCTION

Construction in Canada, (64-201-XPB) Annual. This series provides annual estimates of capital and repair expenditures on construction, broken down by some 70 different structure types, cross-classified by province and sector. Included are final actual, preliminary, and intentions data. For the most part the data are based on the Statistics Canada surveys of Capital Expenditures. From the same source another publication Private and Public Investment, (61-205-XPB), Annual, reports the total capital and repair expenditure program, including outlays on machinery and equipment. Total Value of Construction Work Performed, Annual, in thousands of dollars.

The matrices listed below contain series for Capital and Repair Expenditures representing Actual representing Actual, Preliminary Actual, Intentions and Revised Intentions data. In the Actual matrices, the last two years are the current Preliminary Actual and either the current Intentions or Revised Intentions. The Intentions are available from late February until late July when they are replaced by the Revised Intentions. The Revised Intentions, matrices do not include repairs since these data are not revised on that survey. All of these matrices exclude adjustments and historical revisions made in the National Accounting Systems. The actual matrices begin in 1956, the Preliminary Actual and Intentions begin in 1973. The Revised Intentions matrices begin in 1956, with the following exceptions: 1963 - Mining (1192), 1968 - Government Departments (1220), Private and Public (1224), Public (1228) and Provinces and Territories (1244-1258). The matrices for the provinces and territories also include data split between the Private and the Public categories for Actual's beginning in 1963, Preliminary Actual in 1976, and Intentions Revised Intentions in 1977. For definitions and a description of the methods used to collect these data see Section V, Statistical Notes in either (61-205-XPB) or (61-206-XPB).

### LABOUR AND INCOME

This section contains statistics on Employment, Unemployment, Labour Force Activity and Labour Income. The data originate from various sources. From a sample of approximately 62,000 households, the Labour Force Survey provides basic labour force characteristics data by sex, age, marital status and geographical areas.

The Survey of Employment, Payroll and Hours a mail survey of firms, institutions and organizations of all sizes, measures the levels and changes in employment, paid hours and earnings. These statistics are available at detailed industrial and geographic levels. The rest of the section contains statistics derived primarily from administrative sources and covers such topics as labour income, wage developments from collective agreements, government employment, and unemployment insurance statistics.

### 3. MAJOR WAGE SETTLEMENTS, Quarterly (Labour Canada)

Information on major wage settlements is obtained from collective agreements settled in Canada during the quarter and covering 500 or more employees. The construction industry is excluded prior to 1983. The level of increase pertains to the base rate and includes estimated cost of living allowance (COLA) payments which are quantified by applying actual and/or projected increases in the Consumer Price Index to each COLA clause. For technical notes see Major Wage Settlements, Quarterly.

## VI - 1 MANUFACTURING, ENERGY AND DOMESTIC TRADE

This section contains measures of Industrial Production Activities from the Census of Manufacturers and includes items such as value of shipments and orders, employment, wages, and the cost of materials and supplies. Details are provided here for individual manufacturing industries as identified by the Standard Industrial Classification System, and are available at the Canada, region, and province level. Some production data are also provided. These include motor vehicles, refinery products, gas and utilities.

A summary of statistics from Energy, Mines and Resources representing data presented in the Energy Statistics Handbook, principal statistics of mineral industries, and data from miscellaneous mineral industries is also presented in this section. The results from the Survey of Retail Trade are presented here and include values of sales of goods by industry (S.I.C.) for Canada, values of sales of goods for some types of retail business by province, and department store sales and stocks by departments at the Canada level. Also included in this section are the associated subjects of summary statistics on direct selling, values of inventories of wholesale trade, merchandising inventories and sales figures of new motor vehicles.

### Energy Statistics Handbook

This section contains data that appears in the Energy Statistics Handbook as well as related provincial level Natural Gas and Electricity data. The data is a synthesis of energy statistics taken from numerous published and unpublished sources, put together in a consistent time series format to form a "core" of the most commonly used Canadian energy data.

The data covers all aspects of supply, demand, prices, production, sales, consumption, imports and exports for crude oil, petroleum products, natural gas, electricity and coal, economic, financial and transportation cost data.

## VII -1 OTHER SELECTED STATISTICS

This section contains a selection of the data produced by the United States. Departments of Commerce and Labour and by the provincial statistical office of Alberta, and other data not listed elsewhere such as International Travel and Crime Statistics. For the province of Alberta, the data cover a broad range of measures of economic and social activities and characteristics within their respective borders.

Macro economic indicators for the United States including G.N.P., C.P.I., and Labour Force Activity, obtained from the U.S. Department of Commerce publication Survey of Current Business, are presented in this section. In addition, business indicators for the U.S. are available; they are obtained from the U.S. Department of Labour publication Business Conditions Digest.

## VIII - 1 POPULATION

This section is made up of various Population Projections and Estimates, Vital Statistics and interprovincial and international migration data. Using different hypotheses regarding future and demographic trends series of population projections for Canada the provinces and territories are presented for the year 1986 to 2011. Also included are historical data from the Census of Population for census divisions and subdivisions. Current population estimates, immigration and emigration data, vital statistics, revised annual and quarterly population estimates, interprovincial migration estimates and population for census divisions and census metropolitan areas from 1976 to present complete this section.

### 1. POPULATION PROJECTIONS FOR CANADA, PROVINCES AND TERRITORIES, 1989-2011, (91-520-XPB)

These are Statistics Canada's most recent population projections for Canada, the provinces and territories. They supersede the previous ones which were released in 1985. They are generated by the Statistics Canada Population Projection Model (SCPM) using different hypotheses regarding future trends in fertility, mortality, immigration, emigration and interprovincial migration. Four series are presented here, from Projection 1 to Projection 4; the base population is the 1989 post-censal estimate population by age and sex. More information about the general methodology and assumptions is given in Population Projections for Canada, Provinces and Territories, 1989-2011, (91-520-XPB), Occasional (March 1990). Data on components of growth are also contained in the Publication (91-520-XPB) as well as extensions of these projections at Canada level up to 2036.

In addition, Statistics Canada's projection model is capable of producing customized population, household and family projections and simulations based on user-specified input assumptions. Requests for special projections for either one or more specified spatial units, population groups or components of growth will be considered on a cost-recovery basis. Further enquiries regarding the users' services for special population projections, the projection methodology and unpublished projection data may be addressed to Population Projections Section, Demography Division, Statistics Canada, Ottawa, K1A 0T6 (telephone (613)951-2304).

### ESTIMATES OF POPULATION, Annual

Each year, Statistics Canada produces estimates of population by age, sex and marital status. These estimates, calculated using the component method, are based on the most recent census counts. To these counts are added the number of births, immigrants and in-migrants and from these counts are subtracted the number of deaths, emigrants and out-migrants, (see cat. 91-210-XPB).

1. Immigrants by single years of age, age groups and sex
2. Emigrants by single years of age, age groups and sex
3. Estimates of population by single years of age, age groups and sex
4. Interprovincial migration, In-Out-Net, by single years of age, age groups and sex

## IX - 1 PRICES AND PRICE INDEXES

This section presents several measures of price levels and price movements. The most familiar item is the Consumer Price Index which is a measure of percentage change through time of the cost of a constant basket of goods and services representing the purchases made by a subset of the population in a specified time period. Also included in this section are the Industry Price Indexes for twenty-two major industries in the manufacturing sector.

Construction Price Statistics contain price indexes of inputs into construction, contractors selling prices and special purpose aggregations of price indexes for construction and machinery and equipment relating to specified categories of capital expenditures. The references list point to other sections containing additional specific price indexes.

### 1. CONSUMER PRICE INDEX (62-001-XPB) (62-010-XPB)

Beginning with the January 1995 Consumer Price Index (CPI) the basket of goods and services used to calculate the CPI has been updated to reflect changes in consumer spending patterns. Whenever Statistics Canada updates a basket, it also reviews the principles on which the CPI program is based. The national CPI targets the total population of Canada. Emphasis has been put on representing price movements at the provincial level. Whitehorse and Yellowknife continue to represent the territories. Products in the basket have been regrouped to improve the relevance, balance and international comparability of the resulting series.

### 4. FARM INPUT PRICE INDEX CANADA, Quarterly (62-004-XPB)

Starting with the second quarter 1992, the Farm Input Price Index (FIPI 1986=100) is published by province in addition to the previously available indexes for Eastern Canada, Western Canada and All Canada. This has become possible after considerable improvements in several areas of the FIPI production. In order to accommodate this change, it was necessary to reorganize the FIPI CANSIM matrices from the previous "by input group" system (matrices 1900 - 1909) to the present "by province" system (matrices 2050-2063). This later set of matrices includes all the historical information of the previous set. The previous set is no longer updated as of the second quarter 1992.

## SYSTEM OF NATIONAL ACCOUNTS

The System of National Accounts provides a conceptually integrated framework for the systematic recording of activities within the Canadian economy. The System consists of several parts. Data on Gross Domestic Product by industry provide measures of the output of each industry in the economy. The Income and Expenditure Accounts show how incomes are earned in the course of production and how they are spent. The Financial Flows Accounts comprise the aggregate records of financial transactions in the economy. The Balance of International Payments provides detail on our financial dealings with the rest of the world. The Input-Output Tables are a major integrating element of the system. They show the source of inputs and the purchasers of outputs by industry, and by final demand category. Aggregate Productivity Measures relate inputs to outputs, while Current Economic Analysis brings together selective indicators for evaluating the course and pattern of economic developments in Canada. Also included in this section are matrices demonstrating Interprovincial Trade Flows and selected data from the Human Activity and Environment area.

#### 6. INPUT-OUTPUT TABLES

There are three types of I-O tables: Input Table, Output Table, Final Demand Table:

The Canadian Input and Output tables are rectangular. At the most detailed level, they consist of 243 industries by 679 commodities (including primary inputs, and various margins). Each cell of information in the Input table contains the dollar value of the parts, services, raw materials or labour used up in the production process of the associated industry. The Input table provides a detailed decomposition of the total production costs. The Output table works in a similar manner, but provides a detailed breakdown of the individual goods and services comprising the industry total output. The Final Demand table gives detailed information on goods and services that are bought by many categories of buyers (consumers, industries and government) for both consumption and investment purposes. The Final Demand table includes inventories, imports, exports and non-tax government revenues.

## Statistics Canada's CANSIM Distributors

Partnerships with private-sector providers enable Statistics Canada to distribute its data widely. In combination with access to the CANSIM database, these organizations offer value-added information services specific to their areas of expertise. Modelling software, bulk discounts, specialized retrievals and tailored analyses are among the many benefits enjoyed by clients.

**Call any of our CANSIM distributors for information on cost and service availability.**
