## Releases

## Canada's international transactions in securities

## March 2005

Foreign investors continued purchasing Canadian securities in March acquiring $\$ 1.9$ billion, up from February's investment of $\$ 1.5$ billion. The investment during March occurred mostly in Canadian equities.

Meanwhile Canadian investors were once again quite active, acquiring $\$ 3.6$ billion of foreign securities (see box for expanded coverage of foreign securities). The investment in March went mostly to foreign bonds.

## Foreign investors increase their holdings of Canadian stock

Investment in Canadian equities remained strong in March as foreign investors obtained $\$ 2.2$ billion worth, similar to the investment of the previous month. While acquisitions in February were concentrated in outstanding shares, the March investment was driven by other transactions, largely a Canadian takeover of a foreign firm. This transaction was partly comprised of a share swap whereby the Canadian firm issued shares to the foreign firm's shareholders.

* Includes bonds, stocks and money market paper.

## New series on foreign money market instruments

The coverage of international transactions in securities has been expanded to include foreign money market instruments. With this release, a new monthly series for these transactions is included with data starting in January 2002.

## Related market information

In March, the differential between Canadian and US short-term interest rates continued to increase in favour of investment in the United States. Canadian rates increased by 10 basis points to $2.56 \%$ as US rates increased 20 basis points to $2.74 \%$.

Meanwhile, Canadian long-term interest rates increased 11 basis points to $4.39 \%$ while US rates increased 29 basis points to $4.56 \%$. The resulting differential of 17 basis points marks the first time since November 2000 that long-term rates have favoured investment in the United States.

After recording substantial gains in February, Canadian stock prices were down $0.6 \%$ in March with the S\&P/TSX Composite Index closing the month at 9,612.4. US stocks were also down for the month as the Standard and Poor's Composite Index fell 1.9\% to 1,180.6.

The Canadian dollar rose for the second consecutive month, increasing by 1.60 US cents. It closed March at 82.67 US cents.

## Definitions

The data series on international security transactions cover portfolio transactions in stocks, bonds and money market instruments.

Stocks include common and preferred equities, as well as warrants.

Debt securities include bonds and money market instruments.

Bonds have an original term to maturity of more than one year.

Money market instruments have an original term to maturity of one year or less.

Non-resident investors reduced their holdings of outstanding issues by $\$ 400$ million after purchasing $\$ 2.7$ billion worth the month before. March's divestment of outstanding shares was the largest in that sector since May of last year.

## Holdings of Canadian debt instruments little changed

Foreign investors acquired $\$ 387$ million worth of Canadian bonds in March, offsetting a small divestment in February. The bulk of the investment occurred in corporate bonds ( $\$ 1.3$ billion) and issues of federal government enterprises ( $\$ 545$ million). These purchases were largely offset by reduced holdings across all other sectors, led by federal government bonds.

Investors from continental Europe continued to be the dominant purchasers of Canadian bonds. In the first quarter, they purchased $\$ 3.4$ billion, a quarterly record for investors from that region.

On the year thus far however, overall purchases of Canadian bonds have slowed substantially. Non-resident investors have purchased only $\$ 900$ million worth over the first quarter, the lowest in six quarters and down from $\$ 7.0$ billion purchased over the last quarter of 2004.

For the second consecutive month, foreign investors sold off some of their holdings in Canadian money market paper. While some sectors saw an increase in foreign holdings, a reduction of $\$ 1.3$ billion in foreign holdings of federal government enterprise paper led to an overall decline of $\$ 616$ million.

## Canadians invest heavily in foreign securities

Canadian investors again substantially increased their holdings of foreign securities in March by adding $\$ 3.6$ billion worth. In a reversal from February where purchases of foreign stocks dominated, this time around Canadian investors primarily invested in foreign bonds ( $\$ 2.8$ billion). Canadians invested large amounts in both US corporate and other foreign bonds with purchases of both types reaching record levels for the month. Some of the overseas bonds were again foreign issuers coming to the Canadian market with bonds denominated in Canadian dollars. Canadian investors meanwhile divested some of their positions in US treasury bonds.

Canadian investors also bought foreign stocks and foreign money market paper in March. Purchases of $\$ 491$ million in foreign stocks and $\$ 231$ million in foreign money market paper were primarily in overseas securities with investment in US securities lagging behind for the month.

For the quarter, Canadian investors bought $\$ 6.7$ billion in foreign securities with more than three-quarters going to foreign bonds. The first quarter's investment in foreign securities was the highest since the second quarter of 2002.

1. Interest accrued less interest paid.

Note: A minus sign indicates an outflow of money from Canada, that is, a withdrawal of foreign investment from Canada or an increase in Canadian investment abroad.

## Wholesale trade

March 2005
Wholesale sales increased for the fifth time in six months in March, rising $0.5 \%$ to $\$ 39.1$ billion. Most of the growth was attributable to increased demand for current consumption goods and continuing strong demand for machinery and electronic equipment among businesses.

Since September 2003, total wholesale sales have generally been rising with strength in most trade groups. Previously, lower sales of motor vehicles were the main reason for the decline that began in March 2003. Before that, motor vehicles sales contributed to a robust period of growth that began in the fall of 2001.

Sales rose in three of the seven sectors in March, led by personal and household goods ( $+4.0 \%$ ) and food, beverages and tobacco products ( $+2.3 \%$ ) and machinery and electronic equipment (+2.1\%). Declines were observed in the "other products" category ( $-3.5 \%$ ), which includes such items as seed, fertilizer, chemicals and other farm supplies, as well as in farm products (-14.3\%) and building materials ( $-1.1 \%$ ).

In constant dollars, wholesale sales increased 1.0\% in March.

In the first three months of 2005, the value of wholesale sales rose to $\$ 116.5$ billion, up $1.5 \%$ from the previous quarter. This increase was attributable in part to the strong performance of the personal and household goods sector, which posted quarterly growth
of $5.4 \%$. Building materials ( $+2.9 \%$ ) and machinery and electronic equipment (+2.2\%) also registered solid gains.

## Sales in the personal and household goods sector rebound

After falling 1.1\% in February, sales in the personal and household goods sector grew $4.0 \%$ in March. This gain was especially evident in wholesale sales of apparel ( $+9.9 \%$ ), which showed their biggest monthly advance since January 2001. Strong retail sales of clothing in February along with the elimination of import quotas may have contributed to boost wholesale sales of this trade group in March. The Agreement on Textiles and Clothing, which imposed import quotas on apparel, expired on January 1, 2005.

Wholesale sales of pharmaceuticals also increased in March ( $+3.5 \%$ ), which more than offset the loss recorded in February ( $-2.0 \%$ ). However, the generally rising sales of the past two years mask a slowing of average monthly growth since the start of 2004. In 2003, this group registered very strong growth.

## Second consecutive increase in wholesale sales of food, beverages and tobacco products

Wholesale sales of food products rose $2.3 \%$ in March. First quarter sales were also up ( $+1.6 \%$ ), wiping out the loss in the previous quarter ( $-1.2 \%$ ). After recording generally rising sales until March 2003, this trade group has since seen its sales level off.

Tobacco and alcohol wholesalers also posted gains in March, with an advance of $1.8 \%$. Despite this increase, wholesales in this group have generally been flat since the summer of 2004 after rising vigorously at the start of the year.

## Wholesale sales of farm products down sharply

In March, farm product wholesalers saw a steep drop in sales ( $-14.3 \%$ ). The decrease was largely attributable to wholesalers of live animals. A slowdown in exports to the United States and a low level of inventories for some wholesalers were behind this sharp decrease. Despite the steep drop in March, farm product wholesalers have generally seen rising sales since the start of 2004.

## Increase mainly benefited Alberta and British Columbia

Wholesale sales in Alberta posted a sixth consecutive increase in March, rising 2.8\% to $\$ 4.5$ billion. Increases were reported in many groups, especially machinery and equipment and food
products. For the first three months of the year, sales rose $5.0 \%$ compared with the previous quarter. Total wholesale sales have generally been rising in Alberta since September 2003.

British Columbia wholesalers also posted a strong increase in sales in March (+3.5\%), their third advance in four months. The increase was attributable to the computer and other electronic equipment group and the food products group. Despite the increases of the past two months, wholesalers in British Columbia have had generally stable sales since September 2004, following a period of strong growth that began in September 2003.

The decrease in wholesale sales in Saskatchewan (-6.9\%) partially offset the very large increase in February (+16.5\%). The decline in March was mainly attributable to weaker sales of "other products" and machinery and equipment. However, these same two groups had enjoyed robust growth the previous month.

## Inventories up slightly

After a sharp decline in February (-0.7\%), their first decrease in six months, inventories rose slightly in March (+0.3\%). Much of the increase in inventories in March was concentrated in the machinery and
equipment group (+2.8\%). The value of the inventories of this group accounted for approximately $20 \%$ of the total inventories of wholesalers. The trend in total inventories has generally been upward since November 2003, after a five-month period when wholesalers cut back their inventories.

The inventory-to-sales ratio was essentially unchanged in March at 1.21.

## Available on CANSIM: tables 081-0007 to 081-0010.

Definitions, data sources and methods: survey number 2401.

The March 2005 issue of Wholesale Trade (63-008-XIE, $\$ 15 / \$ 150$ ) will be available soon.

Wholesale trade estimates for April will be released June 17.

## Travel between Canada and other countries March 2005

Canadian travel abroad reached a three and a half year high in March, as a record number of Canadian residents visited overseas countries. Travel to the United States climbed to its highest level since August 2001, prior to the events of September $11^{\text {th }}$.

An estimated 3.7 million Canadians travelled outside the country in March, up $1.8 \%$ from the previous month. A record 518,000 trips were made to overseas countries, up $1.7 \%$ from February, while $1.8 \%$ more trips were made south of the border. (Unless otherwise specified, data are seasonally adjusted).

Same-day car travel to the United States rose 1.6\% to 1.9 million trips in March, its highest level since August 2001 when it hit the 2.2 million mark.

Overnight travel to the United States reached 1.3 million trips, up $1.7 \%$ from February and its highest level in seven and a half years. The increase was fuelled by a $2.8 \%$ jump in plane travel to 426,000 trips in March. Overnight car travel also reached a seven and a half year high, as 734,000 trips were taken, up $1.1 \%$ from the previous month.

Meanwhile, travel to Canada fell $1.5 \%$ to its lowest level since August 2004, as 3.1 million foreigners visited Canada in March. This drop came entirely from a $2.1 \%$ decline in travel by American residents to Canada, which totalled 2.8 million trips.

Same-day car travel from the United States fell 3.9\% to 1.4 million trips in March.

Americans also took fewer overnight trips to Canada in March, despite growth in overnight car travel.

Globally, overnight trips slipped $0.9 \%$ to 1.2 million due to declines in travel by plane and other modes of transportation. However, overnight car travel to Canada reached 755,000 trips, up $0.8 \%$ from the previous month.

Travel from overseas markets increased for the fourth consecutive month, as almost 375,000 overseas residents visited Canada in March, up $2.5 \%$ since February. All but one top 12 overseas markets recorded gains, led by Mexico ( $+30.4 \%$ ), the United Kingdom ( $+9.0 \%$ ) and the Netherlands ( $+8.9 \%$ ). The United Kingdom, Japan, France and Germany remained the four most important overseas markets.

The Canadian dollar gained in value against most of the other major currencies between February and March. These include the US dollar, the Euro, the Japanese yen and the British pound.

## Monthly Survey of Large Retailers

## March 2005

Sales at large retailers continued to show strength in 2005, as consumers boosted sales $0.8 \%$ to $\$ 8.2$ billion in March. First quarter sales were up 2.9\% after a much weaker fourth quarter gain of $0.3 \%$. Previously, sales at large retailers had generally been increasing throughout 2004.

March was the tale of two commodity groups, with sales of the other goods and services category (which includes products such as tobacco, automotive fuels, oils and additives, stationery and pet food) and food and beverages shooting ahead at large retailers. Of the remaining major commodity groups, health and
personal care products, housewares, and sporting and leisure goods saw basically flat sales, while the rest had slight to moderate declines in March.

Large retailers saw their sales of the other goods and services commodity group climb $5.1 \%$ in March, following a moderate drop in February. Sales of tobacco and gasoline, the two most significant commodities within this group, both rebounded in March after declines in the previous month. Tobacco sales surged $7.6 \%$, continuing a recent trend of strong growth over the past six months. Tobacco sales trended downwards during the latter half of 2003 and remained flat throughout most of 2004. Automotive fuels, oils and additive sales were also up strongly in March, largely on the back of rising prices at the pump. Gasoline prices were up 5.2\%
in March, more or less mirroring the $4.2 \%$ gain in fuel sales.

Food and beverage sales were the other area of strength for large retailers in March, up 1.5\%. Sales of non-alcoholic beverages were up strongly for a third consecutive month ( $+6.5 \%$ ), which followed a very sharp drop in December 2004. After two months of declines following the end of the strike at the Société des alcools du Québec, alcoholic beverage sales at large retailers gained $5.2 \%$ compared to February. Rounding things out, food sales were up $1.0 \%$ compared to the previous month.

Sporting and leisure good sales pulled in separate directions in March, as sporting goods sales declined while leisure goods posted a sizeable gain. After an $8.5 \%$ surge in January, sporting good sales tailed off in February and March - most recently sliding by $2.7 \%$. On the other hand, sales of goods such as books and DVDs have done well so far in 2005, with leisure good sales up $4.9 \%$ in the first quarter. The release of popular DVD titles in March helped to pull up sales of pre-recorded CDs, DVDs and video tapes by 3.9\%. Sales of books, newspapers and other periodicals were also up in March, gaining $1.8 \%$ at large retailers for a third consecutive monthly increase.

| Total | 6,313 | 6,788 | 7,408 | 9.1 |

Note: This survey includes large retailers mainly in the food, clothing, home furnishings, electronics, sporting goods, and general merchandise sectors. These retailers represent approximately $26 \%$ of total annual retail sales, or $35 \%$ excluding recreational and motor vehicle dealers.

All data in this release are adjusted for seasonality and all percentages are month-to-month changes unless otherwise indicated. Results from the Monthly Survey of Large Retailers are classified according to the 2002 North American Industrial Classification System.

## Available on CANSIM: table 080-0009.

Definitions, data sources and methods: survey number 5027.

A data table is also available in the Canadian Statistics module online.

Data for the group of large retailers for April will be released on June 17.

For general information or to order data, contact Client Services (1-877-421-3067; 613-951-3549; retailinfo@statcan.ca). To enquire about the concepts, methods or data quality of this release, contact Elton Cryderman (613-951-0669), Distributive Trades Division.

## National Graduates Survey: Manitoba graduates

Class of 2000

According to a new report, graduates from Manitoba's postsecondary institutions were just as likely to be employed as graduates in the rest of the country. However, they tended to earn lower incomes, a reflection of the province's labour market.

In addition, Manitoba's graduates were less likely to have incurred debt during their studies than graduates elsewhere in Canada and their average debt was lower.

This report used data from the National Graduates Survey (Class of 2000) conducted in 2002. It provides a statistical portrait of the graduates of Manitoba's universities and colleges, what they do after graduation and how well they integrate into the labour market. It also includes an analysis of Aboriginal graduates.

In 2000, an estimated 7,700 students graduated from postsecondary college and university programs in Manitoba. They represented $3 \%$ of the nearly 270,000 graduates across the country.

Graduates from the province had many characteristics in common with graduates from the rest of Canada. But there were a few notable differences.

Graduates from Manitoba were more likely to be of Aboriginal origin. However, they were less diverse in terms of visible minority status, citizenship and mother tongue.

A higher proportion of them completed a bachelor degree and they generally took longer to complete their program. Furthermore, college graduates in Manitoba were more likely to have delayed entry into postsecondary education.

Most Manitoba graduates from the Class of 2000 stayed in the province after graduation. However, Manitoba lost more students and graduates than it gained because they were attracted to educational institutions or labour markets outside the province.

Manitoban graduates were just as likely to find employment as graduates in the rest of the country. However, they tended to have lower incomes.

In 2002, the estimated gross annual earnings for a Manitoba graduate who left university with a bachelor's degree in 2000 was $\$ 35,100$, compared with the national median of $\$ 39,000$ for all bachelor's graduates.

A lower proportion of Manitoba graduates incurred debt during their studies than the average Canadian graduate.

In 2000, a bachelor's graduate in Manitoba owed an average of $\$ 19,100$ in debts to all sources, compared
with the average of $\$ 20,500$ for all graduates with a bachelor's degree nationally.

The proportion of Aboriginal graduates with a college diploma reflected roughly the proportion of Aboriginal people in the general population. In contrast, Aboriginal people were under-represented at the bachelor level, and hardly represented at higher levels of study.

Definitions, data sources and methods: survey number 5012.

The report Manitoba Postsecondary Graduates from the Class of 2000: How did they Fare? (81-595-MIE2005029, free) is now available online. From the Our products and services page, under Browse our Internet publications, choose Free, then Education.

For more information, to order data, or to enquire about the concepts, methods or data quality of this release, contact Client Services (1-800-307-3382; 613-951-7608; fax: 613-951-9040; educationstats@statcan.ca), Culture, Tourism and the Centre for Education Statistics.

## Large urban transit

March 2005 (preliminary)
Combined ridership on 10 large urban transit systems in Canada was $1.4 \%$ lower in March than it was for the same month in 2004.

Approximately 120 million passenger trips were taken on these transit systems in March. These systems account for about $80 \%$ of total urban transit in Canada.

The trips generated $\$ 181.4$ million in revenue in March 2005 (excluding subsidies), a $3.1 \%$ increase over March 2004.

Since Easter occured in March this year whereas it fell in April last year, there is a difference in the number of working days in the months being compared in this Daily release. This may explain some of the difference between the two years.
