Crude oil and natural gas: Supply and disposition

January 2007 (preliminary)

Crude oil and equivalent hydrocarbons production increased 0.3% in January. Higher crude production in Newfoundland and Labrador (+15.1%) was countered by lower synthetic production in Alberta (-5.7%).

Exports of crude oil and equivalent hydrocarbons reached 9.2 million cubic metres in January. The volume exported was 5.4% higher than the same period last year, and accounted for 68.7% of total production.

The production of marketable gas declined 1.7% from January 2006. Exports of natural gas, which made up 66.7% of marketable natural gas, jumped 16.8% from the same period last year. Domestic sales of natural gas grew 10.1% as a result of colder than normal temperatures, according to natural gas sales data.

Available on CANSIM: tables 126-0001 and 131-0001.

Definitions, data sources and methods: survey number 2198.

Note: Preliminary data are available on CANSIM at the national level to January 2007 inclusive. At the national and provincial level detailed information is available for crude oil (126-0001) up to November 2006 inclusive, and for natural gas (131-0001) up to November 2006 inclusive.

1. Disposition may differ from production because of inventory change, industry own-use, etc.

2. Crude oil received by Canadian refineries from foreign countries for processing. Data may differ from International Trade Division (ITD) estimates because of timing differences and the inclusion of crude oil landed in Canada for future re-export in the ITD data.

3. Disposition may differ from production because of inventory change, usage as pipeline fuel, pipeline losses, line-pack fluctuations, etc.

4. Includes direct sales.
