#### Canadian Social Trends

November 2008

The November 2008 online edition of *Canadian Social Trends* features two articles, both based on previously released reports.

The first, "Inuit in Canada: Selected findings of the 2006 Census," provides a brief demographic and socioeconomic profile of Inuit, based on data from the 2006 Census. It compares Inuit living in Inuit Nunaat, which refers to the four Inuit regions across the North, to those living outside Inuit Nunaat.

The second, "Selected findings of the Aboriginal Children's Survey, 2006: Family and Community," was adapted from the initial analytical report on the 2006 Aboriginal Children's Survey. This survey provided a statistical portrait of the early development of Aboriginal children under the age of six, and the social and living conditions in which they are learning and growing. This article focuses on the family, community and traditional cultural activities of First Nations children living off reserve, Métis children and Inuit children.

The November 2008 online edition of *Canadian Social Trends*, no. 86 (11-008-XWE, free) is now available from the *Publications* module our website.

For more information, contact Client Services (613-951-5979; [sasd-dssea@statcan.gc.ca](mailto:sasd-dssea@statcan.gc.ca)), Social and Aboriginal Statistics Division.

### Study: Productivity growth in Canadian and US infrastructure industries 1977 to 2003

Most of Canada's main infrastructure industries experienced faster gains in labour productivity than the business sector as a whole between 1977 and 2003, and had similar or higher rates of growth than their counterparts in the United States.

The main infrastructure industries include transportation services, including rail and air; broadcasting and telecommunications; and financial services, including financial intermediation and insurance.

They provide the foundational networks on which other industries rely. They are also industries that have traditionally faced regulation in terms of the pricing of products and the supply of industry outputs. In recent years, they have undergone varying degrees of deregulation and experienced increases in competition.

In Canada, the growth in productivity ranged from an annual average rate of 1.4% in transportation services, to 2.9% in financial services to 4.4% in broadcasting and telecommunications during this 27 year period. These growth rates were higher than the Canadian business sector average.

Between 1977 and 2003, growth in labour productivity in the business sector as a whole was slower in Canada than in the United States. In Canada, labour productivity in the sector increased at an annual average rate of 1.3%, compared with 2.0% in the United States.

In contrast to the Canadian business sector, most infrastructure industries in Canada had higher, or comparable, growth in labour productivity than

#### **Note to readers**

*Labour productivity is defined as real gross domestic product for every hour worked, and is a key factor in higher economic growth. Differences in labour productivity can be attributed either to differences in capital intensity, defined as capital stock per hour worked, or to differences in multifactor productivity, which is affected by technological change among other factors.*

their American counterparts. These include rail transportation, financial intermediation, insurance as well as broadcasting and telecommunications.

For example, the 2.7% rate of growth in financial intermediation in Canada was much higher than the gain of 0.5% in the United States. The gain in insurance was 3.5% in Canada but zero in the United States. Growth in rail transportation was about the same in the two countries.

On the other hand, productivity increased 4.6% in air transportation in the United States, well above the 0.2% rate in Canada.

In infrastructure industries where labour productivity growth was higher in Canada than in the United States, growth in both multifactor productivity and capital intensity was also higher than that in similar American industries, or comparable with it.

The research paper "Productivity growth in Canadian and US regulated industries" is now available as part of *The Canadian Productivity Review* (15-206-XWE2008020, free) series, from the *Publications* module of our website.

## Railway carloadings

September 2008

The Canadian railway industry loaded 23.5 million metric tonnes in September, down 1.4% from September 2007.

Both non-intermodal and intermodal transportation systems experienced decreased activity for the month.

Non-intermodal loadings fell 1.5% from September 2007 to 21.1 million metric tonnes. Although less than half of the 64 commodity classifications declined during the month, the drop was heavily influenced by reduced loadings of other cereal grains, potash, coal, iron ore and concentrates, and lumber. These five commodity groups represent about 40% of the total non-intermodal loadings.

The drop in non-intermodal loadings also marks the lowest amount of loadings for the month of September since 2004.

Intermodal loadings fell 0.3% to 2.4 million metric tonnes from September 2007, as a result of decreased containerized cargo shipments.

Rail freight traffic coming from the United States increased to 3.1 million metric tonnes, up 11.0% compared with the same period last year.

**Available on CANSIM: table 404-0002.**

**Definitions, data sources and methods: survey number 2732.**

The September 2008 issue of *Monthly Railway Carloadings*, Vol. 85, no. 9 (52-001-XWE, free), is now available from the *Publications* module of our website.

For more information, or to enquire about the concepts, methods or data quality of this release, contact the Dissemination Unit (toll-free 1-866-500-8400; fax: 613-951-0009; [transportationstatistics@statcan.gc.ca](mailto:transportationstatistics@statcan.gc.ca)), Transportation Division. ■

## Food services and drinking places

September 2008 (preliminary)

Current dollar sales in September for the food services and drinking places industry increased 0.8% from August to \$4.0 billion, following a similar increase a month earlier.

The price of food purchased in restaurants increased by 0.5% between August and September, according to the Consumer Price Index.

The overall increase in September was mostly attributable to limited-service restaurants where patrons order and pay for their meals at the counter. This industry, which is the second largest of the sector, saw sales increase by 1.2%.

Full-service restaurants, where patrons order and pay for meals at their table, increased by 0.7%. Sales also rose by 0.7% in the special food services sector comprising food service contractors, caterers and mobile food services.

These gains were marginally offset by a 0.6% sales decline in drinking places.

Only two provinces, Prince Edward Island and New Brunswick, posted lower sales.

**Note:** Data prior to September 2007 from the new Monthly Survey of Food Services and Drinking Places were estimated back (backcasted) to January 1998 using the old Monthly Survey of Restaurants, Caterers and Taverns. While every measure was taken to account for changes in survey concepts and design, some caution should be taken when comparing current estimates with those made prior to September 2007. Likewise, caution should also be exercised when using the seasonally adjusted estimates, as the seasonal adjustment factors are calculated using data from both the new survey as well as the backcasted data.

All data in this release are seasonally adjusted and expressed in current dollars unless otherwise specified.

**Available on CANSIM: table 355-0006.**

**Definitions, data sources and methods: survey number 2419.**

For more information about the redesign of the Monthly Survey of Food Services and Drinking Places, or to enquire about the concepts, methods or data quality of this release, contact Marc Racette (613-951-2924; fax: 613-951-6696; [marc.racette@statcan.gc.ca](mailto:marc.racette@statcan.gc.ca)) or Joan Farnworth (613-951-6303; [joan.farnworth@statcan.gc.ca](mailto:joan.farnworth@statcan.gc.ca)), Service Industries Division. □

## Crushing statistics

October 2008

Oilseed processors crushed a record 396 201 metric tonnes of canola in October. Oil production totalled 168 982 tonnes in October while meal production amounted to 230 506 tonnes.

The previous monthly crush record was 374 283 metric tonnes in March 2008.

Available on CANSIM: table 001-0005.

**Definitions, data sources and methods: survey number 3404.**

The October 2008 issue of *Cereals and Oilseeds Review* (22-007-XIB, free) will soon be available.

## How to order products

---

**To order by phone, please refer to:**

- The title
- The catalogue number
- The volume number
- The issue number
- Your credit card number.

From Canada and the United States, call:

**1-800-267-6677**

From other countries, call:

**1-613-951-2800**

To fax your order, call:

**1-877-287-4369**

For address changes or account inquiries, call:

**1-877-591-6963**

**To order by mail, write to:** Statistics Canada, Finance, 6<sup>th</sup> floor, R.H. Coats Bldg., Ottawa, K1A 0T6.

Include a cheque or money order payable to **Receiver General of Canada/Publications**. Canadian customers add 5% GST and applicable PST.

**To order by Internet, write to:** [infostats@statcan.gc.ca](mailto:infostats@statcan.gc.ca) or download an electronic version by accessing Statistics Canada's website ([www.statcan.gc.ca](http://www.statcan.gc.ca)). From the *Our products and services* page, under *Browse our Internet publications*, choose *For sale*.

**Authorized agents and bookstores also carry Statistics Canada's catalogued publications.**
