## Releases

## Canada's international transactions in securities

April 2008
Non-residents' demand for Canadian securities continued to heat up, as substantial acquisitions of Canadian debt instruments in April drove foreign investment to its highest level since November 2006. Foreign investment in both short- and long-term debt instruments rebounded, while equity investment continued at a strong pace.

Foreign portfolio investment in Canadian securities \$ billions

Canadian investors added sizeable amounts of foreign instruments to their portfolios in April. Equities dominated the investment flows, as global stock markets strengthened. Investment in bonds bounced back while Canadians continued to avoid foreign money market instruments, especially US paper.

## Canadian debt instruments lead foreign investment

Non-residents acquired $\$ 7.1$ billion worth of Canadian debt instruments in April, reaching the highest level over the past 12 months with over three-quarters invested in bonds. Canadian provinces and private corporations actively raised funds abroad in

## Related market information

In April, the differential between Canadian and US short-term interest rates continued to increase in favour of investment in Canada. Canadian rates increased by 96 basis points to $2.68 \%$ as US rates moved up 3 basis points to $1.29 \%$.

Meanwhile, Canadian long-term interest rates increased 12 basis points to $3.58 \%$ while US rates increased 26 basis points to $3.77 \%$. Favouring investment in the United States, the resulting differential widened to 19 basis points.

Canadian stock prices were up $4.4 \%$ in April with the Standard and Poor's / Toronto Stock Exchange composite index ending the month with a near-record 13,937.0. Meanwhile, American stock prices climbed $4.8 \%$, ending five months of declines. The Standard and Poor's composite index finished the month off at 1,385.6.

In April, the Canadian dollar rose 1.87 US cents ending the month at 99.29 US cents.

## Definitions

The data series on international security transactions cover portfolio transactions in stocks, bonds and money market instruments for both Canadian and foreign issues.

Stocks include common and preferred equities, as well as warrants.

Debt securities include bonds and money market instruments.

Bonds have an original term to maturity of more than one year.

Money market instruments have an original term to maturity of one year or less. Government of Canada paper includes treasury bills and US dollar Canada bills.

April, while outstanding federal government enterprise bonds continued to be in high demand.

However, non-residents disposed of $\$ 1.5$ billion worth of federal government bonds. This mainly reflected sales of the five-year Government of Canada benchmark bond by American investors.

The three-month string of foreign divestments of federal government Treasury bills came to an end as non-residents bought $\$ 394$ million in April, with Canadian short-term instruments offering relatively more attractive yields.

## Foreign acquisitions of Canadian shares on the secondary market rebound

Non-residents acquired a further $\$ 2.6$ billion of Canadian stocks in April, as a result of a rebound in foreign purchases of outstanding issues. Canadian stock prices rose $4.4 \%$ to a near-record high level in

April, and soaring energy and potash prices boosted foreign investments in shares of mining, energy and industrial sectors.

## Canadian investors buy US government bonds and sell US Treasury bills

Canadians bought $\$ 1.6$ billion worth of foreign bonds in April. Investment was concentrated in US government bonds, in particular the new five-year benchmark bond issued by the US government in late March. However, US corporate and non-US bonds were sold off, reflecting the continued reduction of holdings of maple bonds.

Canadians continued to reduce their holdings of US short-term paper. US government Treasury bills declined by $\$ 853$ million, the second highest drop in six years. With rapidly improving Canadian rates, the short-term interest rate differential between Canada and United States has widened to the highest level since December 2003.

## Strengthened Canadian demand for foreign equities dominated by non-US stocks

As global equity markets posted solid gains in April, residents invested a substantial $\$ 5.6$ billion in foreign shares. The majority of the acquisition in April was non-US foreign stocks, fuelled by robust investment by the Canadian pension fund sector.

Note: A minus sign indicates an outflow of money from Canada, that is, a withdrawal of foreign investment from Canada or an increase in Canadian investment abroad.

## Performing arts <br> 2006

Total operating revenues for the performing arts industry reached $\$ 1.2$ billion in 2006, almost unchanged from 2005. These revenues were split almost equally between the for-profit and not-for-profit sectors.

The operating profit margin overall rose to $5.7 \%$ in 2006, up from $4.3 \%$ in 2005.

For the for-profit companies, the profit margin rose from $8.6 \%$ to $10.3 \%$, while for not-for-profit companies, it rose from a loss of $0.4 \%$ to a profit of $1.2 \%$.

Results in the rest of the release are based on establishments whose combined revenues account for $92 \%$ of the industry's total revenues.

The 20 top performing arts companies accounted for nearly two-thirds of all revenue. Operating revenues of the top 20, including both sectors, rose $1.1 \%$ from 2005 and they reported a profit margin of $2.2 \%$.

For every $\$ 100$ in revenue for not-for-profit companies, ticket sales generated $\$ 42$ and merchandising, royalties and rentals another $\$ 9$. However, grants, subsidies and donations from governments funded $\$ 26$, while those from the private sector provided the remaining $\$ 23$.

Virtually all disciplines in the not-for-profit sector recorded a surplus in 2006.

Overall, these companies attracted an estimated 12.9 million spectators in 2006, down $1.1 \%$ from 2004.

Theatres comprised the largest segment of the not-for-profit sector in 2006, attracting $57 \%$ of total attendance and $48 \%$ of total revenues. Revenues
for these companies were up $2.4 \%$ over 2004, while attendance increased by $4.7 \%$.

Note: The proportion of performing arts businesses subject to direct survey decreased between 2004 and 2006. As a result, the 2004 survey estimates were adjusted in order to enable comparison between the two survey portions for the two years.

## Available on CANSIM: table 361-0009.

Definitions, data sources and methods: survey number 3108.

Selected details from the 2006 Survey of Service Industries: Performing Arts are now available in Performing Arts: Data Tables (87F0003XWE, free), from the Publications module of our website. These tables include breakdowns of data by province and industry (North American Industry Classification System). Researchers can request special tabulations on a cost-recovery basis.

## Farm business cash flows

2007
Cash income for Canadian farm businesses increased $14.5 \%$ in 2007 . The impact of rising grain and oilseed prices more than offset large increases in operating costs and lower receipts for hog and cattle producers.

Cash income for the year rose to $\$ 8.1$ billion, following two consecutive years of decline. The level was 4.0\% above the previous five-year average (2002 to 2006), which included the bovine spongiform encephalopathy period and some years of low grain prices.

Farmers in Quebec, Ontario and the Prairie provinces recorded gains in cash income. Cash income dropped to extremely low levels in the Atlantic provinces and British Columbia. This divergence was largely a result of the wide range of crops and livestock produced across Canada.

Cash available to producers through borrowing increased in 2007, resulting in a $\$ 1.7$ billion net increase
in loans outstanding. Loans outstanding have increased for 14 consecutive years. The 2007 net increase in loans outstanding was below the previous five-year average increase of $\$ 1.8$ billion.

The amount of cash available for investment or withdrawal (cash income plus the net change in loans outstanding) increased $12.5 \%$ to $\$ 9.9$ billion in 2007. This was $2.5 \%$ above the average of the previous five years.

The loans outstanding to cash income ratio fell to 5.6 in 2007 from a record high 6.2 in 2006. However, the 2007 ratio remained above the previous five-year average of 5.3. This ratio indicates the burden of farm debt on farm cash income.

As a result of the release of data from the 2006 Census of Agriculture on May 16, 2007, estimates of the farm business cash flows and other data contained in the Agriculture Economic Statistics series will be revised, where necessary. These revisions will be announced in a future release of the series in The Daily.

Please note that this series does not include data on depreciation, which are available in the publication Farm Operating Expenses and Depreciation Charges: Agriculture Economic Statistics (21-012-XWE, free).

## Available on CANSIM: table 002-0023.

## Balance sheet of the agricultural sector <br> December 31, 2007

Farm sector equity in Canada increased 2.7\% in 2007 to $\$ 198.9$ billion, as assets rose more rapidly than liabilities. The 2007 equity level was 6.2\% above the previous five-year average for the period between 2002 and 2006. Provincially, farmers in Quebec, Ontario, Saskatchewan, Alberta and British Columbia recorded increases.

Total farm assets grew by $3.0 \%$ to $\$ 248.6$ billion in 2007, $7.3 \%$ above the previous five-year average. The value of farm real estate, which accounts for almost two-thirds of total farm assets, was the primary contributor, increasing $3.8 \%$ to $\$ 154.7$ billion and continuing the long-term upward trend seen since 1988. In addition to the increases in farm real estate and machinery, current assets edged upward as the increase in the value of crop inventories offset the decline in the value of livestock inventories. Assets grew in all provinces except Prince Edward Island and New Brunswick, where the value of crop and livestock inventories decreased significantly and land values were relatively flat.

Farm liabilities at the end of 2007 reached $\$ 49.7$ billion, up $3.9 \%$ from 2006 and the 14th consecutive annual rise. Current liabilities advanced 6.3\%, while long-term liabilities recorded an annual increase of $3.2 \%$. Prince Edward Island was the only province to record a decrease in liabilities in 2007.

The assets and liabilities in the balance sheet of the agricultural sector include those of farm businesses and non-operator landlords (for farm real estate assets leased to farm operators and the corresponding liabilities), they exclude the personal portion of farm households. This most closely reflects the assets and liabilities employed in the production of agricultural products.

The debt-to-asset ratio progressed for a 12th consecutive year, climbing to a record $20.0 \%$ in 2007, above the previous record of 19.8\% reached in 2006. This ratio measures the dependence of farm businesses on debt.

The current ratio (current assets divided by current liabilities) edged down in 2007 to 1.996, compared with 2.100 in 2006. The lower ratios recorded since 2003 mean that operators within the agriculture sector have a reduced ability to pay short-term debts compared with earlier periods. The previous 10-year average (1997 to 2006) of the current ratio was 2.465 .

The interest coverage ratio assesses the ability to cover interest charges with the net income being generated (before interest and taxes). This ratio increased slightly to 1.670 in 2007, compared with the record low of 1.519 in 2006. The 2007 level remained below the previous 10-year average of 2.510.

Return on equity rose slightly to $1.0 \%$ in 2007 . This was following two consecutive annual decreases after an 8-year high in 2004 (2.9\%). The 2007 level remained below the previous 10-year average of $2.0 \%$.

As a result of the release of data from the 2006 Census of Agriculture on May 16, 2007, estimates of the balance sheet of the agricultural sector at December 31 and other data contained in the Agriculture Economic Statistics series will be revised, where necessary. These revisions will be announced in a future release of the series in The Daily.
