### 2006 Census maps

The Atlas of Canada, produced by Natural Resources Canada, in partnership with Statistics Canada, presents a series of maps and accompanying analysis of national and regional data results from the 2006 Census. The second release focuses on languages, the labour force and housing and shelter costs. The maps are available on the Atlas of Canada website (<http://atlas.nrcan.gc.ca/site/english/featureditems/index.html>).

Future releases will cover topics such as educational attainment, Aboriginal population and income.

For more information, contact Andrea Levett (613-951-0246), Census Subject Matter Secretariat.

Other questions related to the Internet presentation and/or functionality should be directed to Anna Jasiak (613-996-2817), Natural Resources Canada.

## Releases

### Wholesale trade

September 2009

Wholesale sales in current dollars edged up 0.2% in September, following a 1.5% decline in August. Higher sales in the machinery and electronic equipment sector, and the food, beverages and tobacco products sector offset weaker sales in the automotive products sector. Sales excluding the automotive products sector rose 0.6%.

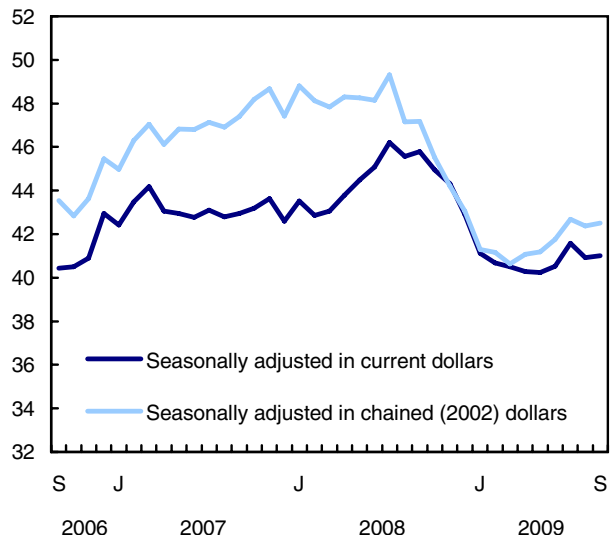

#### Note to readers

Wholesale sales in volume terms are calculated by deflating current dollar values using import and industry product price indexes. Since many of the goods sold by wholesalers are imported, fluctuations in the value of the Canadian dollar can have an important influence on the prices of goods bought and sold by wholesalers.

The wholesale sales series in chained (2002) dollars is a chained Fisher volume index with 2002 as the reference year.

#### Wholesale sales edge up in September

\$ billions

In volume terms, wholesale sales were up 0.3% in September.

Overall, four of the seven sectors, accounting for two-thirds of total wholesale sales, increased in September.

The largest increase came in the machinery and electronic equipment sector, which rose 1.2% in September. Following a 7.2% decline in August, the machinery and equipment trade group, which accounts for close to half of the total sector, rose 4.7%. This was the second increase in 10 months. The computer and other electronic equipment, and office and professional equipment trade groups both declined.

The food, beverage and tobacco products sector rose 1.0% in September, solely based on the strength of the food products trade group.

Sales in the automotive products sector fell 1.9% in September. A 2.0% drop in the sales of motor vehicles was behind most of the decrease. The decline in motor vehicle sales reflects weaker imports of trucks, which fell 31.5%, according to the latest international merchandise trade data. Motor vehicle parts and accessories fell 1.5%, posting its first decline in five months.

#### Ontario accounts for most of total sales increase

Following a 2.2% decline in August, wholesalers in Ontario reported increased sales in September. The province, which accounts for about half of Canada's total wholesale sales, saw an increase of 1.2%. Higher sales in the "other products," (which includes agricultural fertilizers and supplies, chemicals, recycled materials, paper products and other wholesalers) and the food, beverages and tobacco products sectors were major factors contributing to this increase.

In Quebec (-0.8%), sales fell for the second straight month. The automotive products and personal and household goods sectors accounted for most of the decline.

Wholesale sales fell in all four western provinces, with the largest declines in Saskatchewan (-4.1%) and Manitoba (-3.4%). In Saskatchewan, lower sales in agricultural chemical and other farm supplies was a major contributor to the decline. In Manitoba, much of the decrease can be attributed to lower sales in the "other products" sector.

#### Inventories continue to fall

Wholesale inventories fell 0.9% to \$55.0 billion in September, the seventh consecutive monthly decline.

Overall, 8 of the 15 wholesale trade groups reported lower inventory levels, with the largest decline in dollar terms in machinery and equipment, food products, and

apparel. Higher inventories were seen in motor vehicle parts and accessories, and building supplies.

The increase in sales, combined with the decrease in inventories, translated into a decline in the inventory-to-sales ratio from 1.35 in August to 1.34 in September. This was the lowest level since November 2008.

The inventory-to-sales ratio is a measure of the time in months required to exhaust inventories if sales were to remain at their current level.

**The inventory-to-sales ratio declines in September**

Available on CANSIM: tables 081-0007 to 081-0010.

**Definitions, data sources and methods: survey number 2401.**

The September 2009 issue of *Wholesale Trade* (63-008-X, free) will soon be available.

Wholesale trade data for October will be released on December 18.

## Canada's international transactions in securities

September 2009

Foreign demand for Canadian securities was up strongly in September, as non-residents added \$13.6 billion to their portfolios. This activity was largely comprised of significant acquisitions of Canadian stocks. Foreign investors also continued to rebalance their holdings of Canadian debt in favour of longer-term securities, mainly in the federal government sector.

### Foreign portfolio investment in Canadian securities

\$ billions

Canadian investors, in contrast, removed \$4.8 billion from their holdings of foreign securities in September, mainly bonds. This was the largest monthly divestment since December 2008.

### Non-resident demand for Canadian corporate shares up strongly

Foreign investment in Canadian equities reached \$12.9 billion in September, the largest inflow since April 2004. Two-thirds of this activity was directed to new issues of Canadian shares. In September, outward direct investment activity picked up steam, resulting in Canadian firms issuing new shares to non-resident portfolio investors of acquired firms.

At the same time, foreign demand for Canadian shares on secondary markets generated a \$4.3 billion

#### Note to readers

All values in this release are net transactions unless otherwise stated.

The data series on international security transactions cover portfolio transactions in stocks, bonds and money market instruments for both Canadian and foreign issues.

**Stocks** include common and preferred equities, as well as warrants.

**Debt securities** include bonds and money market instruments.

**Bonds** have an original term to maturity of more than one year.

**Money market instruments** have an original term to maturity of one year or less.

**Government of Canada paper** includes treasury bills and US-dollar Canada bills.

inflow, a level last seen in April 2007. Equities from the gold and banking sectors attracted sizeable foreign buying. In September, Canadian equity prices increased nearly 5% to a 52-week high.

### Foreign investors continue to favour Canadian long-term debt instruments

Non-residents continued to adjust their portfolios of Canadian debt securities in September, acquiring \$2.6 billion of Canadian bonds and disposing of \$1.9 billion of Canadian money market instruments.

Non-residents added Canadian bonds issued by private corporations to their holdings in September, predominantly new bonds from the resource and financial sectors. Foreign acquisitions of federal government bonds slowed in September, despite the first issuance of a federal bond on foreign markets since March 2001. Since the beginning of the year, foreign holdings of federal government bonds have increased by one-third. However, non-residents reduced their holdings of federal government enterprise and provincial bonds, due to retirements.

Currency-wise, this activity resulted in foreign investors adding \$9.5 billion of US dollar-denominated Canadian bonds to their portfolios and shedding Canadian dollar-denominated bonds. In September, the Canadian dollar appreciated against its US counterpart, and nearly recouped the depreciation recorded over the past 12 months.

At the short-term end of the maturity spectrum, non-residents reduced their holdings of Canadian money market instruments for a third month. This activity was largely comprised of divestment in federal and provincial government paper.

### Canadians sell foreign shares as major global stock markets post gains

Canadian investors sold \$1.2 billion of foreign shares in September, following three months of acquisitions, as equity prices in major North American and European stock markets posted gains. The divestment activity was focussed in non-US foreign stocks, largely European stocks. At the same time, investment activity in US stocks was sustained. In September, US stock prices continued their recent climb, rising 3.6%.

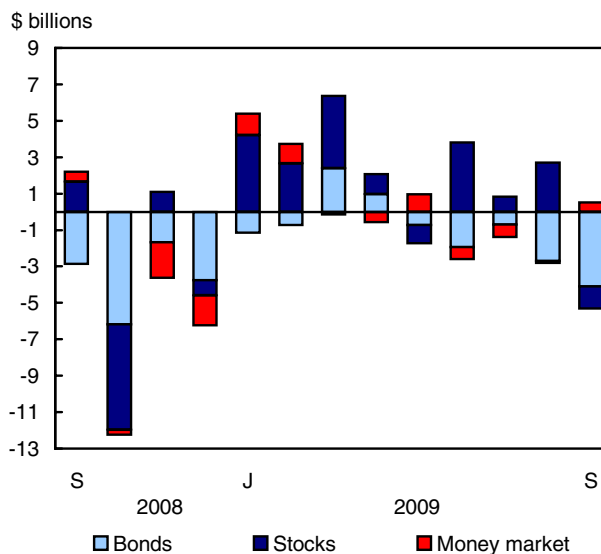

### Divestment in foreign bonds accelerates

Canadians continued to dispose of foreign bonds in September, removing \$4.1 billion from their holdings. This was an extension of divestments that began in May, and amounted to the largest such activity since October 2008. Since the third quarter of 2007, at the outset of global credit concerns, Canadians have reduced their exposure to foreign long-term debt securities by a total divestment of \$29.7 billion.

September's divestment in bonds was focussed in US government as well as in non-US foreign securities. The former was driven by sales of two-year US Treasury bonds and the latter was largely explained by further retirements of maple bonds.

Canadians acquired \$520 million in foreign money market instruments in September, investing in US paper but disposing of non-US paper. Canadian investment in US paper was mostly in Treasury bills.

Canadian portfolio investment in foreign securities<sup>1</sup>

**Note:** A minus sign indicates an outflow of money from Canada, that is, a withdrawal of foreign investment from Canada or an increase in Canadian investment abroad.

## Leading indicators

October 2009

The composite leading index increased 0.7% in October, its fourth straight advance. In October, 8 of the 10 components expanded, the same as in September. Housing remained the fastest-growing component. While the US leading indicator continued to recover, this has been slow to translate into higher demand for factories in Canada.

The housing index rose 4.2%, its sixth straight increase. The initial upturn was led by existing home sales. While sales recently have slowed, housing starts have accelerated, up 4.8% in October. The other components of consumer spending posted moderate growth of about 0.5%. For furniture and appliances, this represents their largest advance since September 2008. Outlays for other durable goods rose for the fourth month in a row, even before auto sales accelerated in October.

The US leading indicator rose by 0.9%, surpassing the growth of the Canadian leading index. Industrial demand, notably autos, and housing led the increase in the United States.

Despite the improvement in the US economy, demand for Canadian manufactured goods remained

uneven. New orders fell for a second straight month. The ratio of shipments to stocks edged up, but only because inventories fell faster than sales. The increase in the average workweek slowed, after two months of acceleration. Still, at 37.3 hours, the workweek remains a full hour longer than its record low set in April.

The stock market rally slowed to 1.0% growth last month, after the smoothed version rose by an average of 4% over the previous five months.

## Construction Union Wage Rate Index

October 2009

The Construction Union Wage Rate Index (including supplements) for Canada remained unchanged in October compared with September. The composite index increased 2.4% compared with October 2008.

**Note:** Union wage rates are published for 16 trades in 22 metropolitan areas for both the basic rates and rates including selected supplementary payments. Indexes on a 2007=100 time base are calculated for the same metropolitan areas and are published for those where a majority of trades are covered by current collective agreements.

**Available on CANSIM: tables 327-0003 and 327-0045.**

**Definitions, data sources and methods: survey number 2307.**

The third quarter 2009 issue of *Capital Expenditure Price Statistics* (62-007-X, free) will be available in January 2010.

## Financial and wealth accounts resectoring

With the release of the Financial Flow Accounts (FFA) on December 1 and the National Balance Sheet Accounts (NBSA) on December 14, the Income and Expenditure Accounts Division will be publishing revised sector and category detail on CANSIM. These changes are briefly described below.

A new sector, National Financial Accounts, has been added to the FFA. This sector estimates total domestic financial transactions for the Canadian economy. It is the FFA equivalent to the National Balance Sheet in the NBSA.

A number of sectors and categories that were previously published in both the FFA and NBSA are combined in order to provide more relevant sector and category information.

Market value estimates in the NBSA on annual and quarterly bases have been expanded. Annual market value data are published for all sectors from 1970, while book value estimates remain available from 1961. Quarterly data are available for all sectors from the first quarter of 1990 for market and book value estimates. The release of these estimates will facilitate international comparisons with other countries.

To help users to convert from the current CANSIM tables to the new tables, the following concordance tables between the old and new vector numbers are now available: Financial Flow Accounts; National Balance Sheet Accounts (annual); and National Balance Sheet Accounts (quarterly).

**Definitions, data sources and methods: survey number 1804.**

The publication *Latest Developments in the Canadian Economic Accounts, "Financial and Wealth Accounts Resectoring"* (13-605-X, free) is now available from the *Publications* module of our website.
