Livestock estimates

As of January 1, 2009

Farm inventories of cattle, hogs and sheep all declined between January 1, 2008 and January 1, 2009, reflecting market uncertainty and rising input costs.

Hog inventories were down 10.2% to 12.4 million. Cattle producers reported 13.2 million head as of January 1 this year, down 5.1% compared with same period a year earlier. Sheep and lamb numbers fell 2.1% to 808,200 head.

Rising input costs, due in part to increased feed grain prices and market uncertainty, had an impact on producers in all three sectors, and exerted downward pressure on profits.

In addition, Country of Origin Labeling legislation in the United States created an uncertain marketplace for Canadian producers. In the case of hogs, the Canadian government put the Cull Breeding Swine Program in place to help hog producers reduce the size of their herds.

Hogs

The decline in hog numbers in 2008 continued a three-year downward trend. The breeding herd alone, mainly sows and gilts, declined 7.1% to 1.4 million head.

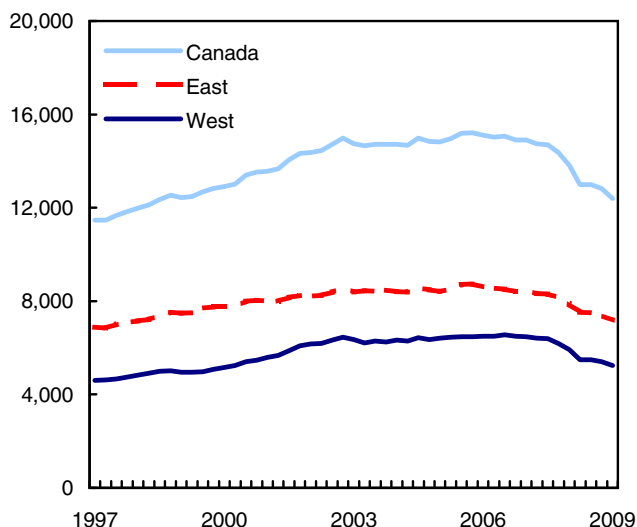

Despite the recent decline in the Canadian dollar, hog producers are still facing financial pressures. Lower prices drove down revenues for hogs sold for domestic slaughter and for export.

Over the last decade, hog production has evolved toward complete market integration in North America. American hog finishing operations took advantage of

an ample local corn supply and fed it to weaners born from the breeding and farrowing operations in Canada. In addition, a shortage or a loss of slaughter capacity on one side of the border has been offset by sufficient capacity on the other side.

Beef and dairy

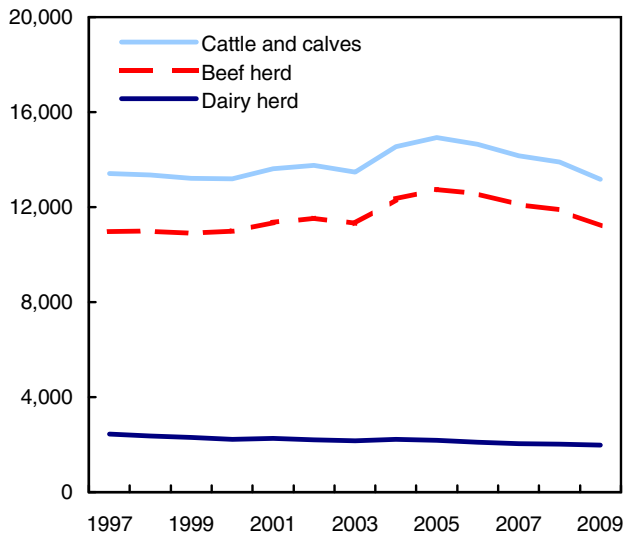

The national cattle inventory has been declining during the past four years. Between January 1, 2008 and January 1, 2009, the dairy herd fell 2.5%, while the beef herd fell 5.6%. The beef herd shows no sign of rebuilding, as the number of cows is down 6.6% and the number of replacement heifers is down 9.7%.

On January 1 this year, there were 86,520 farm operations reporting beef herds, down 3.8% from the same period a year earlier.

Beef numbers fell last year in the four major beef producing provinces: Alberta (-3.3%), Saskatchewan (-8.0%), Manitoba (-6.1%) and Ontario (-14.5%). These declines continued long-term downward trends. Combined, these provinces accounted for 89.0% of the Canadian beef herd.

Sheep

Between January 1, 2008 and January 1, 2009, the national sheep and lamb inventory declined 2.1% to 808,200 head. Lamb and mutton production has

slowed in recent years due to major challenges such as loss of export markets and domestic demand.

On the other hand, lamb imports to be fed and slaughtered in Canada have increased since 2006 to levels similar to those of the early 1990s.

Market receipts from the sale of sheep and lambs between January and September 2008 were down from the same period in 2007. Relatively strong prices helped offset the decline.
