University enrolment

2006/2007

Enrolment in Canadian universities rose 0.9% in the academic year 2006/2007, the second smallest growth rate since 2000.

Young adults aged 18 to 21 accounted for 90% of this growth as their numbers increased 2.1% to 427,400.

Enrolment, which was on the decline throughout the mid-1990s, has picked up in the last 10 years. This was due largely to a higher number of these students aged 18 to 21, whose rate of growth outpaced that of total enrolment.

Female students accounted for 58% of all registrations in 2006/2007, a proportion that has remained steady since 2001.

In 2006/2007, 611,700 women were registered, up 1.1% from the previous academic year, while the number of male students rose 0.7% to 445,300.

Undergraduate and graduate enrolment

Total undergraduate enrolment amounted to 811,800, up 1.1% from the previous academic year. Women accounted for 59% of the total undergraduate enrolment.

Undergraduate enrolment among men increased 1.1%, compared with a 1.0% increase for women, which was half their rate of growth in the previous academic year.

About 95,700 students were enrolled in a master's program in 2006/2007, up 1.8% from the previous academic year. Women accounted for just over 54% of enrolment at the master's level.

At the doctorate level, enrolment of 36,800 in 2006/2007 was virtually unchanged from the previous academic year. This was the smallest increase in enrolment in doctoral programs since 1999/2000.

Men still outnumber women in doctorate programs, although their proportion has been on the decline. In 2006/2007, men accounted for less than 54% of doctorate registrations, down from 60% in 1995/1996.

Full- and part-time enrolments

Full-time university enrolment rose 0.8% to 788,000 in 2006/2007.

Note to readers

Data for the University of Regina are not included in estimates of counts for 2005 and 2006. National trend analysis involving years prior to 2005 compared with 2005 or 2006 will be affected insignificantly by this absence.

The 2006/2007 data for the University of British Columbia are preliminary. Enrolment counts for certain universities are based on estimates.

University enrolment data for 2006/2007 are obtained using information from the Postsecondary Student Information System, formerly the Enhanced Student Information System, and from the University Student Information System.

The data are subject to revision.

The number of full-time registrations rose in four provinces: Prince Edward Island (+3.3%), Ontario (+2.7%), Manitoba (+1.2%), and Quebec (+0.8%).

The largest decline in full-time registration occurred in New Brunswick at 4.8%, followed by Newfoundland and Labrador (-3.0%), British Columbia (-2.4%), and Nova Scotia (-2.1%).

Part-time university enrolment increased 1.2% to 269,300. The largest gains were in Prince Edward Island (+20.8%) and Alberta (+13.3%). Universities in New Brunswick, Newfoundland and Labrador, British Columbia, Nova Scotia and Quebec recorded declines in part-time enrolment.

Fields of study

The top three fields of study by numbers of registrants (social and behavioral sciences and law; business, management and public administration; and the humanities) accounted for nearly one-half (49%) of total enrolment in 2006/2007.

A record 187,300 students were registered in social and behavioral sciences, and law, up 4,700 from the previous academic year. This field of study accounted for almost 18% of total enrolment.

Enrolment in business, management and public administration reached 174,700, an increase of 6,300.

Enrolment fell in four fields (personal improvement and leisure; humanities; physical and life sciences, and technologies; and mathematics, computer and information sciences).

The decline in mathematics, computer and information sciences field continued a long-term trend. In 2006/2007, 33,900 students were enrolled in the field, down 7.4% from 2005/2006 and well below the peak of 46,000 in 2001/2002. The field accounted for 3.2% of total enrolment in 2006/2007, the lowest proportion since 1992.

The table 477-0013 will soon be available on CANSIM.

Definitions, data sources and methods: survey number 5017.

Data tables are available from the *Summary tables* module of our website.

... not applicable

1. Enrolment figures do not include the University of Regina.

2. The percentage changes are based on rounded figures.

3. Percentage change is not provided due to the absence of data for the University of Regina in 2005/2006 and 2006/2007.

Note: Enrolment figures may not add up due to rounding to the nearest 100.

University degrees, diplomas and certificates awarded

2006

Approximately 225,900 students received a qualification from a Canadian university in 2006, a 4.9% increase from 2005.

Of all qualifications, about 60%, or 136,200, were awarded to women, continuing a long-term trend in which female graduates have outnumbered their male counterparts. Women have outnumbered men at every level other than at the doctorate level since 1994.

At the undergraduate level, some 181,400 students received a degree, a certificate or a diploma in 2006, a 5.1% gain from 2005.

About 34,100 students received a master's level qualification in 2006, up 3.4% from 2005. The 2006 level represents 9,200 more master's degrees than the level in 2001, the equivalent of a 36.9% increase.

Some 16,100 men received a master's degree in 2006, up 0.8% from 2005, as did 18,100 women, a 5.8% increase.

Universities granted 4,500 doctorate degrees in 2006. Women accounted for 42% of these doctorates, up from 34% a decade earlier.

The number of degrees, diplomas and certificates rose in all fields of study in 2006, except one:

mathematics, computer and information sciences (-5.8%).

Among the fields of study with the largest numbers of qualifications awarded, the largest increase in graduates occurred in health, parks, recreation and fitness (+9.0%); social and behavioural sciences, and law (+8.3 %); and education (+5.9%).

Note: Data for the University of Regina are not included in estimates of counts for 2005 and 2006. National trend analysis involving years prior to 2005 compared with 2005 or 2006 will be affected insignificantly by this absence. For Quebec institutions, micro programs and attestations are not included. The data for the University of British Columbia are preliminary.

Available on CANSIM: table 477-0014.

Definitions, data sources and methods: survey number 5017.

Data tables are also available from the *Summary tables* module of our website.

New Housing Price Index

January 2009

Contractors' selling prices decreased 0.6% between December and January, a slightly faster pace than the 0.1% decline observed the previous month. This resulted in a New Housing Price Index of 156.4 (1997=100).

Between December and January, prices declined 2.8% in Edmonton, followed by Calgary

(-2.1%), Victoria (-1.1%) and Vancouver (-0.7%). Builders in all four cities report difficult market conditions.

In Saint John, Fredericton and Moncton, new housing prices increased 1.4% from a month earlier, as builders increased their list price or returned to list price after reporting lower negotiated prices in previous months.

In both St. John's and Saskatoon, prices increased 0.8% from a month earlier while Québec posted a monthly increase of 0.6%.

The New Housing Price Index decreased by 0.8% in January compared with the same month a year earlier. This was the first year-over-year decrease at the Canada level since January 1997.

In the Prairie region, 12-month declines were recorded in Edmonton (-10.4%), Calgary (-6.5%) and Saskatoon (-2.7%).

On the West Coast, Victoria (-4.2%) and Vancouver (-3.2%) each posted year-over-year declines.

Percentage change from the same month of the previous year (cities with the smallest or negative change)

Among surveyed cities, the largest year-over-year increase was registered in St. John's at 24.1%, followed by Regina at 21.7%.

In Québec, the 12-month growth rate was 5.7%, while in Montréal prices increased 3.8%.

Compared with January 2008, contractors' selling prices were 5.2% higher in Winnipeg, and 3.3% higher in Ottawa–Gatineau.

Percentage change from the same month of the previous year (cities with the largest positive change)

Available on CANSIM: table 327-0005.

Definitions, data sources and methods: survey number 2310.

The fourth quarter 2008 issue of *Capital Expenditure Price Statistics* (62-007-XWE, free) will be available in April.

Survey on Financing of Small- and Medium-sized Enterprises 2007

Small- and medium-sized enterprises applied for \$59 billion in loans in 2007, and were approved for about 86%, or \$51 billion. This was higher than the approval rate of 80% in both 2000 and 2004.

The larger a firm's employment, the more likely it had requested external financing. About 14% of those with zero employees requested financing, while almost one-half of the largest businesses, those with 100 to 499 employees, did so.

The vast majority (97%) of requests by businesses with 100 to 499 employees were approved. The approval rate for businesses with zero employees was 85%.

As in previous surveys, the loan request rate was higher in capital intensive sectors, such as agriculture, primary industries and manufacturing. It was lower in human capital intensive sectors (knowledge-based industries).

Almost all requests in the primary sector were approved. The lowest approval rate was in accommodation and food services (80%).

As in 2004, one in five businesses cited difficulty in obtaining financing as an obstacle to the growth of the business.

Overall, one-quarter of all business owners reported that they intended to retire from their businesses over the next five years. Of these, one in five intended to keep the business in the family, two in five planned to sell the business to outsiders, and most of the remainder intended to close it.

Half of all businesses reported that they depended on financial institutions to fund the start-up of their businesses, with two out of three saying they depended on loans for their ongoing operations.

Note: The 2007 Survey on Financing of Small- and Medium-sized Enterprises was conducted in partnership with Industry Canada and Finance Canada, as part of a data collection program on small- and medium-sized businesses. The survey covered about 15,000 responding firms operating in 2007 with fewer than 500 employees and less than \$50 million in revenue. Results cover seven industry groupings, five employment sizes, six geographic regions and start-ups compared with established firms. This was the third benchmark survey. Data are available

for 2004 and 2000, as well as for a smaller sample in 2001.

Definitions, data sources and methods: survey number 2941.
