Study: Off-farm work by farmers

1991 to 2006

Nearly one-half (48%) of the 327,055 operators of census farms in Canada in 2006 reported that they worked off their holding, an increase from 44% in 2001.

As the number of operators has declined, the number reporting off-farm work has increased. Between 1991 and 2006, the number of operators in Canada fell 16%, while the number who worked off the farm rose 9%.

The prevalence of off-farm work by operators increased in each farm size class, as measured by gross revenue. In both 2001 and 2006, more than 60% of operators of census farms with gross revenues below \$10,000 were employed elsewhere.

In contrast, 25% of the operators of farms with gross revenues of more than \$250,000 were employed off-farm in 2006. This was up from 19% in 2001.

For operators of both smaller and larger farms, human capital and the characteristics of farms were significant factors in whether an operator worked elsewhere.

For instance, the typical operator with a university degree was far more likely to work off-farm compared with the average for all operators. Younger operators were more likely to be engaged in off-farm work, as were male operators compared with female operators.

For operators of smaller farms, family characteristics as well as community and regional characteristics were significantly more important factors. For example, operators who lived in communities that experienced rapid growth in employment between 1991 and 2001 were more likely to be engaged in off-farm work.

Note to readers

This study used data from the 2006 Census of Agriculture. Inter-relationships were estimated using data from the 2001 agriculture-population linkage database combined with community-level data from the 2001 Census of Population.

The 2006 agriculture-population linkage database, released in December 2008, was not available when this study was prepared.

Farms referred to in this release are "census farms," specifically, any holding with agricultural products for sale, regardless of size. An operator is an individual who makes the day-to-day decisions in operating the holding.

Contrary to expectations, the proximity to urban centres was not associated with the probability of off-farm work participation. Thus, the performance of rural labour markets is an important factor in the economic well-being of farm operators.

Other factors in off-farm work included the type of farm and the corporate structure. Operators of dairy farms were considerably less likely to report off-farm work, compared with any other type of farm operation. Off-farm work was more likely to occur for operators of unincorporated farms, and for farms where there was more than one operator associated with the farm.

The article "Off-farm work by farmers: The importance of rural labour markets" is now available as part of the *Rural and Small Town Canada Analysis Bulletin*, 1991 to 2006, Vol. 8, no. 1 (21-006-XWE, free), from the *Publications* module of our website.

For more information, or to enquire about the concepts, methods or data quality of this release, contact Alessandro Alasia (613-951-1204, alessandro.alasia@statcan.gc.ca), Agriculture Division. ■

Salaries and salary scales of full-time teaching staff at Canadian universities 2006/2007 and 2007/2008

A final set of tables for the academic year 2006/2007, which contain information on the salaries of full-time teaching staff for Canadian universities that have more than 100 staff, are now available. Information on salaries of full-time teaching staff for 2007/2008 is also being released for three additional universities: Dalhousie University, University of Saskatchewan and University of Victoria.

This information was collected annually under the University and College Academic Staff System and has a reference date of October 1. Therefore, the data reflect employment in universities as of that date. Each university must authorize Statistics Canada to release their information.

Definitions, data sources and methods: survey number 3101.

The report "Salaries and salary scales of full-time teaching staff at Canadian universities, 2006/2007: Final report" is now available as part of the *Culture, Tourism and the Centre for Education Statistics: Research Papers* (81-595-MWE2009073, free) series. From the *Publications* module of our website, under *All subjects*, choose *Education, training and learning*.

Also available are special requests from the full dataset of information collected under the University and College Academic Staff System for 2006/2007. Unlike the bulletin, this dataset includes information on all institutions, including those with fewer than 100 staff.

For more information, or to enquire about the concepts, methods or data quality of this release, contact Client Services (toll-free 1-800-307-3382; 613-951-7608; fax: 613-951-4441; educationstats@statcan.gc.ca), Culture, Tourism and the Centre for Education Statistics. ■

Canadian Tobacco Use Monitoring Survey 2005 and 2006

The file combining microdata from the 2005 and 2006 Canadian Tobacco Use Monitoring Survey (CTUMS) is now available. This file provides a larger dataset for researchers to examine sub-groups of the population. The data have been re-weighted to reflect this two-year period. Users should note that variables not common to both years were dropped from the combined file.

Note: The CTUMS, conducted since 1999 by Statistics Canada on behalf of Health Canada, provides timely, reliable and continuous data on tobacco use and related issues. Its objective is to track changes in smoking status and amount smoked, especially among young people aged 15 to 24, who are most at risk for taking up smoking. This file contains the data for a two-year period collected between February 2005 and December 2006 inclusively.

Definitions, data sources and methods: survey number 4440.

Combined 2005 and 2006 data are now available in the *Canadian Tobacco Use Monitoring Survey Microdata File*, February 2005 to December 2006 (82M0020XCB, \$2,140). See *How to order products*.

For information on the microdata file, or to enquire about the concepts, methods or data quality of this release, contact Client Services (toll-free 1-800-461-9050; 613-951-3321; fax: 613-951-4527; ssd@statcan.gc.ca), Special Surveys Division. ■

Forge seed usage and seed corn trade 2008

Data from the Forge Seed Usage Survey and Seed Corn Trade Survey of 2008 are now available.

Definitions, data sources and methods: survey numbers, including related surveys, 3442 and 3451.

To obtain these data, or to enquire about the concepts, methods or data quality of this release, contact Dave Burroughs (613-951-5138; daveburroughs@statcan.gc.ca), Agriculture Division. ■

Releases

Canada's balance of international payments, first quarter 2008 2
The current account surplus with the rest of the world (on a seasonally adjusted basis) increased sharply to \$5.5 billion in the first quarter of 2008, led by higher prices for several export commodities combined with a lower import deficit. In the financial account, foreign investment flows into Canada slowed significantly from the expansion-driven pace of the previous quarter, while Canadian direct investment abroad continued to strengthen.
