## Wholesale trade

## March 2010

Wholesale sales increased for the fourth time in five months, up $1.4 \%$ to $\$ 44.4$ billion in March. The major contributors to the increase were the machinery, equipment and supplies, and the building materials and supplies subsectors.

In volume terms, wholesale sales were up $2.2 \%$ in March.

Canadian wholesalers sell to both the domestic and international markets, and are active importers and exporters. The higher increase in the volume of sales, compared with the current dollar sales gain in March, principally reflects the lower prices paid by wholesalers for imported goods. This was caused, in part, by the appreciation of the Canadian dollar with respect to the US currency during the month.

In March, six of the seven wholesale subsectors, accounting for close to $85 \%$ of total sales, posted gains.

The largest increase came in the machinery, equipment and supplies subsector, which rose $4.9 \%$ to $\$ 8.9$ billion in March. This was the highest sales level since February 2009. Growth was reported in all four industries in this subsector, most notably in other machinery, equipment and supplies ( $+7.7 \%$ ), and

## Note to readers

All the data in this release are seasonally adjusted and in current dollars, unless otherwise noted.

Wholesale trade sales expressed in volume are calculated by deflating current dollar values using import and industry product price indexes. Since many of the goods sold by wholesalers are imported, fluctuations in the value of the Canadian dollar can have an important influence on the prices of the goods bought and sold by wholesalers.

The wholesale sales series in chained (2002) dollars is a chained Fisher volume index with 2002 as the reference year.

Starting with the April 21, 2010, release of February 2010 data, the presentation of results makes direct use of the North American Industry Classification System (NAICS) instead of its trade group variant (see concordance table).

The previous CANSIM tables 081-0007 to 081-0010 have been replaced by CANSIM tables 081-0011 to 081-0013. Data beginning in January 2004 are available in the new CANSIM tables. In addition, data for provincial and territorial totals and for Canada level totals of selected sub-sectors and industries are now available beginning in January 1993. In order to allow users to adapt to these new series, access to the new CANSIM tables will be free until June 30, 2010.
computer and communications equipment and supplies (+6.0\%).

The building material and supplies subsector continued on its upward trend that began in mid 2009. This subsector increased $1.6 \%$ in March, marking a seventh consecutive monthly advance. All three of its component industries showed gains.

The only decrease in March was reported in the personal and household goods subsector ( $-0.6 \%$ ), which declined for the third time in four months. This drop was mainly due to lower sales in the pharmaceuticals and pharmacy supplies ( $-1.8 \%$ ), and the textile, clothing and footwear ( $-6.6 \%$ ) industries.

## Wholesale sales up in all provinces

Wholesalers in all provinces reported higher sales in March, with Ontario and Alberta posting the largest increases in dollar terms.

Wholesale sales in Ontario increased for the sixth time in seven months, up $1.2 \%$ to $\$ 22.7$ in March. Higher sales in the machinery, equipment and supplies subsector contributed to this growth.

In Alberta, sales increased for the fifth consecutive month, up $2.2 \%$ to $\$ 5.0$ billion in March, as a result of
higher sales in the machinery, equipment and supplies, and the building materials and supplies subsectors.

In Quebec, sales rose $0.5 \%$ following a $2.5 \%$ decline in February.

Sales in British Columbia increased for the fifth time in six months, increasing 2.1\% in March after falling 5.1\% in February.

## Inventories down slightly

Wholesale inventories edged down $0.2 \%$ following a $0.3 \%$ increase in February.

Overall, 16 of the 25 wholesale industries reported lower inventory levels. The largest decreases in dollar terms were in the food, other miscellaneous, new motor vehicle parts and accessories, and the pharmaceuticals and pharmacy supplies industries. Higher inventories were seen in the lumber, millwork, hardware and other building supplies, metal service centres, recyclable material, and the home entertainment equipment and household appliance industries.

The increase in sales, combined with the slight decline in inventories, resulted in the inventory-to-sales ratio falling from 1.17 in February to 1.15 in March.

The inventory-to-sales ratio is a measure of the time in months required to exhaust inventories if sales were to remain at their current level.

The inventory-to-sales ratio decreases

## Available on CANSIM: tables 081-0011 to 081-0013.

Definitions, data sources and methods: survey number 2401.

The March 2010 issue of Wholesale Trade (63-008-X, free) will soon be available.

Wholesale trade data for April will be released on June 17.

## Travel between Canada and other countries

 March 2010Canadian travel to the United States and overseas countries rose $3.6 \%$ in March from the previous month, while travel to Canada from abroad declined 3.7\%.

Canadian residents took nearly 4.4 million trips outside of the country in March. This included 3.7 million trips to the United States, up $4.0 \%$ from February. Overnight travel by Canadian residents to the United States increased 0.9\%, with the largest increase being seen in the number of overnight car trips, up $1.5 \%$ in March compared with February.

Same-day car travel to the United States rose 6.7\% from February as Canadian residents took 2.0 million same-day car trips to the United States in March.

Canadian residents took 690,000 trips to overseas destinations in March, a $1.8 \%$ increase from February.

United States residents took 1.7 million trips to Canada in March, down 4.3\% from February. Overnight travel by US residents decreased 2.5\%, although there was a $1.8 \%$ increase in overnight car travel in March from February.

The number of same-day car trips to Canada by US residents declined $8.1 \%$ to 605,000 trips.

Residents of overseas countries took 368,000 trips to Canada in March, down 0.7\% from February.

Note: Monthly data are seasonally adjusted.

## p preliminary

## revised

1. Percentage change is based on unrounded data.
2. Totals exceed the sum of "same-day car trips" and "total trips, one or more nights" because they include all of the same-day trips.
3. Estimates for the United States include counts of cars and buses, and estimated numbers for planes, trains, boats and other methods.
4. Figures for other countries exclude same-day entries by land only, via the United States.
5. Includes same-day and overnight trips.

## Canadian Health Measures Survey: Blood pressure in children and adolescents <br> 2007 to 2009

Based on data from the 2007 to 2009 Canadian Health Measures Survey (CHMS), the study "Blood pressure in Canadian children and adolescents" found a low overall prevalence of elevated or borderline elevated blood pressure among Canadian children and adolescents.

The study found that $0.8 \%$ of young people aged 6 to 19 had elevated blood pressure, while $2.1 \%$ had borderline levels.

These findings are based on data from direct, automated measures of blood pressure in cycle 1 of the CHMS, which was conducted from March 2007 through February 2009 at 15 sites across the country.

The survey used a mobile examination centre (a specially designed pair of trailers staffed by trained health professionals) to collect physical measures. This study is based on 2,079 examination centre respondents aged 6 to 19.

Echoing the results of other studies, the study found that mean systolic blood pressure was significantly higher among boys aged 12 to 19 and girls aged 6 to 11 who were overweight or obese.

Mean diastolic blood pressure was significantly higher only among obese boys aged 12 to 19.

Excess weight is believed to influence blood pressure through increased sympathetic nervous system activation, which is associated with systolic blood pressure.

Elevated blood pressure is one of the most important causes of death and disability worldwide, accounting
for 7.6 million premature deaths and 92 million disability-adjusted life years annually. Children who have higher blood pressure tend to stay at higher blood pressure levels when they reach adulthood. Hence, high blood pressure in youth may be a risk factor for the development of hypertension in adulthood. This persistence of high blood pressure from younger to older ages is more apparent among overweight and obese youth.

Definitions, data sources and methods: survey number 5071.
