## Releases

Monthly Survey of Manufacturing, May 2012
Manufacturing sales declined $0.4 \%$ to $\$ 48.7$ billion in May, the fourth decrease in five months.

## Investment in non-residential building construction, second quarter 2012 <br> Investment in non-residential building construction increased $1.8 \%$ to $\$ 11.2$ billion in the second quarter. The increase, which followed three quarters of declining investment, was attributable to higher spending in the commercial and industrial components.

Farm Input Price Index, first quarter 2012
Primary iron and steel, May 2012
Supply of natural gas liquids and sulphur products from processing plants, January to March 2012
Residential care facilities, 2010/2011

## Releases

## Monthly Survey of Manufacturing, May 2012

Manufacturing sales declined $0.4 \%$ to $\$ 48.7$ billion in May, the fourth decrease in five months. Sales in the petroleum and coal product industry dropped $9.6 \%$, reflecting temporary shutdowns at some refineries. This drop was largely offset by gains in the aerospace product and parts industry. Excluding the petroleum and coal product industry, total manufacturing sales rose $1.2 \%$.

Sales fell in 13 of 21 industries, representing approximately two-thirds of manufacturing. Sales of non-durable goods declined $3.2 \%$, while durable goods sales rose $2.4 \%$.

Constant dollar sales increased $0.2 \%$ in May, reflecting a rise in the volume of durable goods sold.
Despite four monthly declines in overall manufacturing sales in 2012, manufacturing employment has continued to increase. Employment rose $2.0 \%$ in May according to the Labour Force Survey. Since January 2012, employment in the manufacturing sector has risen $4.5 \%$ to 1.8 million workers.

Chart 1
Current dollar sales decrease

## Sales drop in petroleum largely offset by higher aerospace production

Sales in the petroleum and coal product industry fell $9.6 \%$ to $\$ 6.4$ billion. The drop reflected temporary shutdowns at some refineries and lower prices. Even with the decrease in May, sales of petroleum and coal products were slightly higher than they were in May 2011 ( $\$ 6.3$ billion).

Sales declines were also reported by manufacturers in the machinery ( $-3.5 \%$ ) and other transportation equipment (-26.1\%) industries.

Production in the aerospace product and parts industry rose $65.8 \%$ to $\$ 1.5$ billion, following a $34.8 \%$ decrease in April. Despite the increase in May, year-to-date production in the industry was $6.5 \%$ lower than it was in the same period in 2011.

In the fabricated metal product industry, sales rose $2.8 \%$. Sales in the motor vehicle industry increased $1.6 \%$ to $\$ 4.6$ billion, its 10th increase in 11 months. Sales in the motor vehicle industry were at their highest level since November 2007.

## Sales decline in four provinces

Sales decreased in four provinces in May, with Ontario and Alberta posting the largest declines in dollar terms.
Sales in Ontario declined $1.9 \%$ to $\$ 22.4$ billion, the first decrease following two months of increases. A $31.8 \%$ drop in sales for petroleum and coal products was responsible for the reduction and reflected temporary shutdowns at petroleum refineries. However, increases in the aerospace product and parts ( $+52.3 \%$ ) and motor vehicle industries moderated the decrease. Motor vehicle manufacturers reported a $1.7 \%$ rise in sales to $\$ 4.5$ billion, following a 10.0\% advance in April.

In Alberta, sales fell $2.6 \%$ to $\$ 6.1$ billion. The petroleum and coal product industry was mostly responsible for the drop, with sales down $7.7 \%$. This was the third consecutive monthly decrease for the industry and reflected temporary shutdowns. Sales in the machinery industry ( $-4.8 \%$ ) also dropped in May.

Gains in six provinces partly offset the decreases in Ontario and Alberta. In Quebec, sales increased 2.2\%, reflecting gains in aerospace product and parts. Production in this industry rose $85.6 \%$ in May, following a $45.6 \%$ drop in April. In New Brunswick, gains in the non-durable goods industry drove the $9.0 \%$ increase in sales.

## Inventory levels rise

Inventories advanced $2.1 \%$ in May to $\$ 66.0$ billion, almost entirely as a result of a sharp increase in the petroleum and coal product industry. With this advance, total inventories were at their highest level since January 2009.

In the petroleum and coal product industry, total inventories increased $29.5 \%$ ( $+\$ 1.3$ billion) to $\$ 5.6$ billion. Over $61 \%$ of the increase reflected higher raw materials held at a number of refineries. Gains in goods-in-process and finished product inventories also contributed to the advance.

Higher inventories in the motor vehicle ( $+6.0 \%$ ) and the computer and electronic product ( $+2.2 \%$ ) industries also contributed to the overall advance in May.

## Chart 2

Inventory levels rise

The inventory-to-sales ratio advanced to 1.35 in May from 1.32 in April. The inventory-to-sales ratio is a measure of the time, in months, that would be required to exhaust inventories if sales were to remain at their current level.

## Chart 3

The inventory-to-sales ratio advances

## Unfilled orders increase

Unfilled orders rose $0.7 \%$ to $\$ 63.1$ billion in May. The advance reflected increases in the aerospace product and parts industry and the fabricated metal products industry. A $4.7 \%$ decline in the computer and electronic product industry offset a portion of the gains.

In the aerospace product and parts industry, the value of unfilled orders increased $1.8 \%$ to $\$ 31.0$ billion. The increase in May reflected a rise in the value of the US dollar relative to the Canadian dollar, as a large portion of unfilled orders in the industry are held in US dollars.

Unfilled orders in the fabricated metal product industry rose $2.4 \%$ to a high of $\$ 6.9$ billion in May. Gains in unfilled orders for architectural and structural metals were responsible for a large portion of the advance in the industry.

Chart 4
Unfilled orders increase

New orders were relatively flat in May at $\$ 49.2$ billion, following a $2.6 \%$ decrease in April.

## Note to readers

The 2011 manufacturing review will be published in the coming weeks. The review examines recent trends for sales by industry and other relevant variables related to manufacturing.

All data in this release are seasonally adjusted and are expressed in current dollars unless otherwise specified. For more information on seasonal adjustment, see Seasonal adjustment and identifying economic trends.

Preliminary data are provided for the current reference month. Revised data, based on late responses, are updated for the three previous months.

Non-durable goods industries include food, beverage and tobacco products, textile mills, textile product mills, clothing, leather and allied products, paper, printing and related support activities, petroleum and coal products, chemicals, and plastics and rubber products.

Durable goods industries include wood products, non-metallic mineral products, primary metal, fabricated metal products, machinery, computer and electronic products, electrical equipment, appliances and components, transportation equipment, furniture and related products and miscellaneous manufacturing.

## Production-based industries

For the aerospace industry and shipbuilding industries, the value of production is used instead of sales of goods manufactured. This value is calculated by adjusting monthly sales of goods manufactured by the monthly change in inventories of goods in process and finished products manufactured.

Unfilled orders are a stock of orders that will contribute to future sales assuming that the orders are not cancelled.
New orders are those received whether sold in the current month or not. New orders are measured as the sum of sales for the current month plus the change in unfilled orders from the previous month to the current month.

## Investment in non-residential building construction, second quarter 2012

Investment in non-residential building construction increased $1.8 \%$ to $\$ 11.2$ billion in the second quarter. The increase, which followed three quarters of declining investment, was attributable to higher spending in the commercial and industrial components.

Chart 1
Investment in non-residential building construction

Investment rose in seven provinces, with the largest increases in Ontario, Quebec and Alberta.
In Ontario and Alberta, the gains were led by the industrial and commercial components, while in Quebec, they occurred in commercial and institutional spending.

All three investment components declined in New Brunswick and Prince Edward Island, while in Newfoundland and Labrador, investment decreased in the industrial and institutional components.

Investment rose in 17 of the 34 census metropolitan areas. The biggest increases were in Toronto, Montréal and Vancouver. All three components were up in Toronto and Vancouver, while commercial and industrial spending contributed to the gains in Montréal.

The largest decreases occurred in St. Catharines-Niagara, where investment fell in the commercial and institutional components, and in Greater Sudbury, where all three components were down.

## Commercial component

Investment in commercial building construction rose $2.3 \%$ from the first quarter to $\$ 6.7$ billion. Commercial investment increased in every province except Prince Edward Island and New Brunswick.

The largest increases occurred in Central Canada. In Quebec, commercial investment rose $4.2 \%$ to $\$ 1.2$ billion, led by the construction of office and retail buildings. Investment in Ontario increased $2.1 \%$ to $\$ 2.4$ billion, led by higher investment in retail buildings.

In Alberta, second quarter commercial investment was up $1.4 \%$ to $\$ 1.6$ billion. The gain came from spending on office and retail buildings and from living quarters for the oilsands projects.

Chart 2
Commercial, institutional and industrial components
billions of dollars, seasonally adjusted

## Industrial component

Industrial investment rose $6.2 \%$ to $\$ 1.4$ billion in the second quarter, the third consecutive quarterly gain. Spending was higher in seven provinces, with the largest increases in Alberta, Ontario and British Columbia.

Alberta led with an $11.2 \%$ increase to $\$ 333$ million, attributable to investment growth in utility and maintenance buildings.

The increases in Ontario and British Columbia were led by rising investment in manufacturing and mining facilities. In Ontario, investment was up $6.7 \%$ to $\$ 474$ million, while in British Columbia, spending increased $22.4 \%$ to \$137 million.

The largest decline occurred in Newfoundland and Labrador, where investment fell $21.9 \%$ to $\$ 74$ million. Investment declined across several categories of industrial buildings, reflecting the completion of some projects.

## Institutional component

In the institutional component, investment declined $1.1 \%$ from the first quarter to $\$ 3.1$ million. This was the ninth consecutive quarterly decrease, although the pace of decline was slower in the second quarter.

Institutional investment declined in seven provinces.

The largest decrease occurred in Alberta, where investment declined $5.3 \%$ to $\$ 271$ million, reflecting the completion of several projects in the educational category.

In British Columbia, investment decreased $3.5 \%$ to $\$ 348$ million. The decline was led by lower spending for educational buildings and health care facilities.

The largest increase was in Quebec, where institutional spending rose $2.8 \%$ to $\$ 497$ million, mostly as a result of larger investment for educational facilities.

## Note to readers

Unless otherwise stated, this release presents seasonally adjusted data expressed in current dollars, which facilitates comparisons by removing the effects of seasonal variations.

Investments in non-residential building construction exclude engineering construction (such as for highways, sewers, bridges and oil and gas pipelines). This series is based on the Building Permits Survey of municipalities, which collects information on construction intentions.

Work put-in-place patterns are assigned to each type of structure (industrial, commercial and institutional). These work patterns are used to distribute the value of building permits according to project length. Work put-in-place patterns differ according to the value of the construction project; a project worth several million dollars will usually take longer to complete than will a project of a few hundred thousand dollars.

Additional data from the Capital and Repair Expenditures Survey are used to create this investment series. Investments in non-residential building data are benchmarked to Statistics Canada's System of National Accounts of non-residential building investment series.

For the purpose of this release, the census metropolitan area of Ottawa-Gatineau (Ontario/Quebec) is divided into two areas: the Ottawa part and the Gatineau part.

## Farm Input Price Index, first quarter 2012

The Farm Input Price Index rose $2.6 \%$ in the first quarter, following a $1.5 \%$ increase in the fourth quarter.
Crop production $(+5.5 \%)$ contributed the most to the quarterly movement of the index, with the overall increase offset by decrease in building costs ( $-0.3 \%$ ).

The index increased in all provinces during the first quarter with Alberta ( $+3.0 \%$ ) and Saskatchewan ( $+3.8 \%$ ) contributing the most to the national growth. Cattle costs contributed the most to higher prices in Alberta (+7.9\%), while crop production costs drove the increase in Saskatchewan ( $+9.0 \%$ ).

Nationally, farm input prices increased 6.1\% between the first quarter of 2011 and the first quarter of 2012.
All main components of the index showed an annual increase, with animal production ( $+8.5 \%$ ), crop production $(+8.8 \%)$ and machinery and motor vehicles ( $+5.5 \%$ ) contributing the most.

Higher annual animal production costs were primarily the result of cattle prices rising $17.2 \%$ since the first quarter of 2011.

Year over year, the Farm Input Price Index increased in all regions across Canada, with Alberta (+7.6\%) and Ontario ( $+5.6 \%$ ) contributing the most to the advance of the index.

## Note to readers

For more information about the methodology, go to the "Definitions, data sources and methods" section by clicking survey number 2305 , which appears below.

## Table 1

Farm Input Price Index, by component, Canada - Not seasonally adjusted

|  | Relative importance ${ }^{1}$ | First quarter $2011^{r}$ | Fourth quarter $2011^{r}$ | First quarter $2012^{p}$ | Fourth quarter 2011 to first quarter 2012 | First quarter 2011 to first quarter 2012 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \% | (2002=100) |  |  | \% change |  |
| Farm input total | 100.00 | 134.2 | 138.8 | 142.4 | 2.6 | 6.1 |
| Buildings | 9.36 | 130.7 | 134.4 | 134.0 | -0.3 | 2.5 |
| Machinery and motor vehicles | 19.27 | 139.4 | 145.8 | 147.1 | 0.9 | 5.5 |
| General business costs | 15.33 | 134.3 | 132.3 | 134.4 | 1.6 | 0.1 |
| Crop production | 23.17 | 154.5 | 159.4 | 168.1 | 5.5 | 8.8 |
| Animal production | 32.88 | 118.0 | 124.5 | 128.0 | 2.8 | 8.5 |

[^1]Table 2
Farm Input Price Index, total, by region - Not seasonally adjusted
