Releases

Labour Force Survey, August 2013

Employment increased by 59,000 in August, mainly in part-time work, and the unemployment rate declined 0.1 percentage points to 7.1%. Over the six months to August, employment gains averaged 12,000 per month, lower than the average of 29,000 observed during the preceding six-month period.

Since August 2012, employment has increased 1.4% (+246,000). At the same time, the number of hours worked has grown 1.3%.

Chart 1 Employment

Provincially, employment increased in Ontario and Alberta, while it declined in Manitoba.

Employment in health care and social assistance rose in August, offsetting a decline in July. There were also more people working in information, culture and recreation; accommodation and food services; and in construction. At the same time, there were fewer employed in educational services; "other services"; finance, insurance, real estate and leasing; and agriculture.

Employment gains were concentrated among people aged 55 and over, while there was little change among youths and people aged 25 to 54.

The employment rate of returning students aged 15 to 24 was up slightly this summer compared with last summer, but still low compared with rates prior to the 2008/2009 labour market downturn.

Chart 2 Unemployment rate

Employment up in Ontario and Alberta

In Ontario, employment increased by 44,000 in August, mostly in part-time work, and the unemployment rate was 7.5%. Compared with 12 months earlier, employment growth in the province was 2.2%, higher than the national average of 1.4%.

In August, employment in Alberta rose by 15,000, the fourth notable increase in five months. These recent gains have brought year-over-year employment growth to 3.6%. As more people searched for work in August, the unemployment rate rose 0.3 percentage points to 4.8%.

Employment in Manitoba declined for the second consecutive month, down 3,100 in August. At the same time, the unemployment rate decreased by 0.3 percentage points to 5.2% as fewer people were looking for work. Compared with 12 months earlier, employment in the province was little changed.

Despite little change in employment in Quebec, the unemployment rate declined 0.3 percentage points to 7.9% in August as there were fewer people looking for work. On a year-over-year basis, employment was little changed, as gains in the first five months of the period were offset by recent losses.

Industry perspective

In health care and social assistance, employment rose by 60,000 in August, more than offsetting the decline in July. Employment in this industry has been on a long-term upward trend and has increased by 2.5% since August 2012.

Employment increased by 33,000 in information, culture and recreation in August, countering losses over the previous two months. These gains brought employment to a level similar to that of 12 months earlier.

In August, the number of people working in accommodation and food services increased by 26,000. Employment rose by 3.9% compared with 12 months earlier.

Employment in construction rose by 18,000 in August. Following a recent low in August 2012, employment in this industry has increased 9.1%.

Employment in educational services declined by 22,000 in August and has fallen by 2.8% from 12 months earlier.

In August, employment in "other services" fell by 19,000, contributing to a 12-month decline of 4.1% in this industry.

There were 19,000 fewer people working in finance, insurance, real estate and leasing in August. Employment in this industry has been relatively unchanged over the previous 12 months.

Agriculture employment was down by 11,000 in August, bringing employment to the same level as 12 months earlier.

In August, there were 40,000 more people working as employees, mainly within the private sector. Over the previous 12 months, the number of employees increased 1.5% in the private sector, while it was little changed in the public sector. At the same time, self-employment rose 3.6%, driven mostly by gains in early 2013.

Employment gains among people aged 55 and over

In August, employment among people aged 55 and over rose by 52,000, with most of the gains among women. Compared with 12 months earlier, employment for men and women in this age group increased by 146,000 (+4.5%), partly a result of population aging.

Employment among youths aged 15 to 24 was little changed in August, and the unemployment rate was 14.1%. Youth employment has increased 1.7% since August 2012, mainly a result of gains in the first half of the period.

Among people aged 25 to 54, employment was little changed in August. Compared with 12 months earlier, employment for this group was up 0.5% (+61,000), with the gains coming in 2012.

Student summer employment

From May to August, the Labour Force Survey collects labour market data about young people aged 15 to 24 who were attending school full time in March and who intend to return to school full time in the fall. The published data are not seasonally adjusted; therefore, comparisons can only be made on a year-over-year basis.

The average employment rate for May to August for students aged 15 to 24 was 48.6%, up slightly from last summer (47.9%), and the same as the rate in the summer of 2009 (48.6%), when student employment was hard hit by the labour market downturn. In contrast, the rates averaged 54.1% in the summers of 2006 to 2008.

The employment rate for students aged 15 and 16 declined to 24.4% this summer, the lowest rate since comparable data have been available. On the other hand, employment rates rose for students aged 17 to 19 and 20 to 24 compared with last summer.

The average unemployment rate over the summer for students aged 20 to 24 was 11.2%, while it was 17.4% for those aged 17 to 19, and 28.8% for students aged 15 and 16.

The average number of hours worked at all jobs during the summer of 2013 by students aged 15 to 24 was 23.7 hours per week, down from 24.2 hours the previous summer. This was the first decline in hours among these students since the summer of 2009.

Note to readers

The Labour Force Survey (LFS) estimates are based on a sample and are therefore subject to sampling variability. As a result, monthly estimates will show more variability than trends observed over longer time periods. Estimates for smaller geographic areas or industries also have more variability. For an explanation of sampling variability of estimates and how to use standard errors to assess this variability, consult the "Estimates quality" section of the publication Labour Force Information (71-001-X).

The employment rate is the number of employed persons as a percentage of the population 15 years of age and over. The rate for a particular group (for example, youth aged 15 to 24) is the number employed in that group as a percentage of the population for that group.

The unemployment rate is the number unemployed as a percentage of the labour force (employed and unemployed).

The participation rate is the number of employed and unemployed as a percentage of the population. For more detailed information, see the Guide to the Labour Force Survey (71-543-G).

Unless otherwise stated, this release presents seasonally adjusted estimates, which facilitates comparisons by removing the effects of seasonal variations. For more information on seasonal adjustment, see Seasonal adjustment and identifying economic trends.

Each year, the LFS revises its estimates for the previous three years, using the latest seasonal factors.

Labour productivity, hourly compensation and unit labour cost, second quarter 2013

Labour productivity in Canadian businesses rose 0.5% in the second quarter, after edging up 0.1% in each of the previous two quarters.

Chart 1
Productivity and real output of Canadian businesses grow at the same pace

Real gross domestic product of businesses grew 0.5%, after gaining 0.6% in the first quarter. Service-producing businesses, especially in retail and wholesale trade, the finance and insurance sector and real estate services, were largely responsible for this growth.

Hours worked in the business sector were unchanged in the second quarter, after increasing 0.5% in the previous quarter. A 0.4% gain in hours worked in service-producing businesses was offset by a 0.8% decline in hours worked in goods-producing businesses. The extensive flooding in Southern Alberta and the construction strike in Quebec in the last two weeks of the second quarter resulted in a 0.2 percentage point reduction in the quarterly change in hours worked.

Productivity increased in both goods-producing businesses (+0.3%) and service-producing businesses (+0.6%) in the second quarter. The largest productivity gains were in arts and entertainment (+3.7%), utilities (+1.7%), finance and insurance (+1.5%) and agriculture (+1.5%). Conversely, labour productivity was lower in mining and oil and gas extraction (-1.0%), transportation and warehousing (-0.5%) and real estate services (-0.5%).

In the United States, the productivity of American businesses rose 0.2% in the second quarter, after edging up 0.1% in the first quarter and decreasing 0.5% in the fourth quarter of 2012.

Labour costs per unit of production for Canadian businesses were up 0.6% in the second quarter, as the growth of average compensation per hour worked (+1.1%) outpaced that of productivity.

The unit labour costs of Canadian businesses expressed in terms of US dollars fell 0.9%, a second consecutive quarterly decline. The average value of the Canadian dollar expressed in US dollars was down 1.4% in the quarter, a second straight quarter of depreciation.

By comparison, the unit labour costs of American businesses rose 0.4%, following a 1.4% decline in the first quarter.

Note to readers

Revisions

With this release of labour productivity and related variables, data were revised back to the first quarter of 2013 at the aggregate level and to the first quarter of 2012 at the industry level.

Productivity measure

The term "productivity" in this release refers to labour productivity. For the purposes of this analysis, labour productivity and related variables cover the business sector only. Labour productivity is a measure of real gross domestic product (GDP) per hour worked. Unit labour cost is defined as the cost of workers' wages and benefits per unit of real GDP.

All the growth rates reported in this release are rounded to one decimal place. They are calculated with index numbers rounded to three decimal places, which are now available on CANSIM.

Calculations of growth rates are based on index numbers rounded to three decimal places.
 The exchange rate corresponds to the Canadian dollar value expressed in US dollars.
 US data are from Bureau of Labor Statistics, Productivity and costs: Second quarter 2013 published in NEWS, August 16.

Available in CANSIM: tables 383-0008 and 383-0012.

Definitions, data sources and methods: survey number 5042.

The *National economic accounts* module, accessible from the *Browse by key resource* module of our website, features an up-to-date portrait of national and provincial economies and their structure.

Links to other releases from the national accounts can be found in the second quarter 2013 issue of *Canadian Economic Accounts Quarterly Review*, Vol. 12, no. 2 (13-010-X). This publication will be updated on September 13, at the time of the release of the financial flow accounts and national balance sheet accounts.

Labour productivity, hourly compensation and unit labour cost data for the third quarter will be released on December 6.

Stocks of principal field crops, July 31, 2013

As of July 31, total stocks of most crops were down from the same date in 2012.

Total stocks of wheat decreased 14.8% to 5.1 million metric tonnes as of July 31, mostly because of a 16.5% decline in commercial stocks. Stocks held on farms fell 202 000 tonnes to 1.6 million tonnes, mainly driven by Alberta, where on-farm stocks decreased by 160 000 tonnes (or -23.5%) to 520 000 tonnes. The five-year average for total stocks of wheat at July 31 is 5.5 million tonnes.

For canola, total stocks fell 14.0% to 608 100 tonnes as of July 31. This was significantly lower than the five-year average of 1.5 million tonnes. The decrease was mostly the result of a 24.3% drop in commercial stocks to 408 100 tonnes. However, on-farm stocks were up 19.0% from the same date in 2012 to 200 000 tonnes.

Total stocks of barley were down 17.7% (or -212 000 tonnes) from the same date a year earlier to 983 400 tonnes as of July 31. On-farm barley stocks explain the majority of the decline, with levels dropping 17.0% (or -163 000 tonnes) to 794 000 tonnes. The five-year average for total stocks of barley stands at 1.6 million tonnes.

Total stocks of oats declined 36.9% from July 31, 2012 to 510 800 tonnes. The five-year average levels stands at 846 200 tonnes. Commercial stocks were down 29.0% to 170 800 tonnes, while on-farm stocks fell 40.2% to 340 000 tonnes.

Note to readers

Data on stocks of principal field crops come from the July Farm Survey of about 15,000 Canadian farmers conducted from July 24 to August 5. Farmers were asked to report the amounts of grain, oilseeds and special crops in on-farm storage. Data on commercial stocks of western major crops originate from the Canadian Grain Commission.

Commercial stocks of corn and soybeans are estimated by a Statistics Canada survey of grain elevators in Eastern Canada. These data will be available on October 4 with the "September Estimates of Production of Principal Field Crops" release. Data on commercial stocks of special crops originate from a survey of handlers and agents of special crops.

National supply-disposition tables for the major grains and special crops are available in CANSIM tables 001-0041 to 001-0043.

September estimates of production of principal field crops will be released on October 4.

Table 1
Total stocks of principal field crops at July 31

	2011	2012	2013	2011 to 2012	2012 to 2013
	thousands of tonnes			% cha	nge
Total wheat	7,360	5,932	5,057	-19.4	-14.8
Wheat excluding durum	5,794	4,446	3,906	-23.3	-12.1
Durum wheat	1,566	1,486	1,151	-5.1	-22.5
Barley	1,502	1,195	983	-20.4	-17.7
Canola	2,186	707	608	-67.7	-14.0
Oats	733	810	511	10.5	-36.9
Lentils	830	860	300	3.6	-65.1
Dry field peas	535	295	174	-44.9	-41.0
Flaxseed	193	137	71	-29.0	-48.2
Chick peas	22	11	54	-50.0	390.9
Rye	51	25	46	-51.0	84.0
Mustard seed	116	83	36	-28.4	-56.6
Sunflower seed	36	7	23	-80.6	228.6
Canary seed	30	17	15	-43.3	-11.8

Note(s): Figures may not add up to totals as a result of rounding.

Available in CANSIM: tables 001-0010, 001-0017 and 001-0040 to 001-0043.

Definitions, data sources and methods: survey numbers 3401, 3403, 3404, 3443, 3464, 3476, 5046 and 5153.

Coal and coke statistics, June 2013

Data on coal and coke are now available for June.

Available in CANSIM: tables 135-0001 and 135-0002.

Table 135-0001: Coke.

Table 135-0002: Coal.

Definitions, data sources and methods: survey numbers 2003 and 2147.

Fertilizer Shipments Survey, fourth quarter 2013 (final)

Final data from the Fertilizer Shipments Survey are now available for the fourth quarter of the fertilizer year 2012/2013.

Available in CANSIM: tables 001-0066 to 001-0069.

Tables 001-0066 to 001-0069: Canadian fertilizer inventories, production, and shipments by product and nutrient content.

Definitions, data sources and methods: survey number 5148.

The publication *Fertilizer Shipments Survey*, no. 2 (21-022-X), is now available from the *Browse by key resource* module of our website under *Publications*.

Deliveries of major grains, July 2013

Data on major grain deliveries are now available for July.

Available in CANSIM: table 001-0001.

Definitions, data sources and methods: survey numbers 3403, 3404, 3443, 5046 and 5153.
