### Study: Parenting and child support after separation or divorce, 2011

Approximately 5 million Canadians separated or divorced within the last 20 years, according to data from the 2011 General Social Survey on Families. Of these, about one-quarter (24%) had at least one child together aged 18 or younger at the time of the survey.

The mother's home was most often (70%) the child's primary residence after a separation or divorce. An additional 15% reported that the child lived mainly with the father, while 9% reported that the child had equal living time between the two parents' homes. The remaining 6% indicated other living arrangements.

Parents whose child lived with their ex-spouse or ex-partner most often saw their child less than three months over the course of the previous year. In all, 18% had no contact with their child and 44% spent some time, but less than three months. They were, most often, fathers.

Depending on where the child lived, the responsibility for making major child-related decisions on health, religion and education varied. In 2011, 21% of parents whose child primarily resided with them said major child-related decisions were made jointly or on an alternating basis with their ex-partner. This was perceived differently by parents whose child lived with their ex-partner, as almost half (49%) reported joint or alternating decision-making.

Almost three-quarters of separated or divorced parents (74%) were satisfied with the amount of the time spent with their children. This satisfaction was often tied to the living arrangements of the child and the actual amount of time spent with the child. For example, 90% of parents whose child mainly lived with them were satisfied with the amount of time spent with their child. In comparison, 44% of parents whose child did not primarily live with them were generally satisfied. This proportion increased to 64% for those spending at least five months a year with their child.

Financial support for the care of children was in place for about half of all separated or divorced parents. Child support payments, often made monthly, ranged from under \$1,000 to over \$10,000 a year, with the most common amount totalling between \$3,000 and \$4,999 a year. Compliance with payment amounts was generally high, with three-quarters of recipients having received the full amount in the 12 months preceding the survey.

#### **Note to readers**

*This release is based on the analytical paper "Parenting and Child Support After Separation or Divorce," available today through the publication Spotlight on Canadians: Results from the General Social Survey.*

*The report uses data from the 2011 General Social Survey on Families and examines parenting decisions in the wake of a marital or common-law breakup, including child residency, time-sharing, and decision-making. It also looks at financial support arrangements for the child, including payment amounts and schedules.*

*The paper focuses on individuals who had separated from a legal marriage, separated from a common-law relationship or divorced in the 20 years prior to the survey, and who also had children aged 18 years or younger at the time of the survey.*

**Definitions, data sources and methods: survey number 4501.**

The article "Parenting and Child Support After Separation or Divorce," part of the publication *Spotlight on Canadians: Results from the General Social Survey* (89-652-X) is now available from the *Browse by key resource* module of our website under *Publications*.

## Accounting services, 2012

Operating revenue for the accounting services industry increased 4.8% in 2012 to \$15.0 billion.

This industry provides a range of services to its clients. The majority of its revenues are generated from accounting, bookkeeping and payroll services. These activities represented 59.1% of sales in 2012. The remainder came from taxation services (25.3%), management consulting services (7.9%), insolvency and receivership services (2.6%) and other sales of goods and services (5.2%).

Ontario (41.9%), Quebec (18.9%), Alberta (15.3%) and British Columbia (13.6%) generated nearly 90% of operating revenues for the industry.

Operating expenses increased 5.7% to \$10.8 billion in 2012. Salaries, wages and benefits, which account for the largest portion of operating expenses, increased 5.9% year over year.

As operating expenses increased more than operating revenues, the operating profit margin decreased from 28.6% in 2011 to 28.0% in 2012. Firms in Saskatchewan, British Columbia, Quebec and New Brunswick posted higher operating profit margins than the national average.

The business sector, which is the primary client of the accounting services industry, accounted for more than three-quarters (76.2%) of sales in 2012. Individuals and households represented 10.9%, government and public institutions 7.7%, and the remainder was generated from clients outside Canada (5.2%).

### **Note to readers**

*Data for the period from 2007 to 2011 have been revised.*
