Releases

Canadian international merchandise trade, February 2014

Canada's merchandise exports grew 3.6% and imports were up 2.1% in February. As a result, Canada's trade balance with the world went from a deficit of \$337 million in January to a surplus of \$290 million in February.

Chart 1 Exports and imports

billions of dollars

Note(s): Data are seasonally adjusted.

Exports increased to \$42.3 billion on the strength of motor vehicles and parts as well as energy products. Overall, volumes were up 2.2% and prices, 1.4%.

Imports grew to \$42.1 billion, as prices increased 1.4% and volumes were up 0.6%. Higher imports of energy products, motor vehicles and parts, as well as industrial machinery, equipment and parts were partially offset by lower imports of metal and non-metallic mineral products.

Exports to the United States rose 4.4% to \$32.4 billion on higher exports of motor vehicles and parts, and energy products. Imports from the United States increased 3.3% to \$28.1 billion on the strength of motor vehicles and parts. Consequently, Canada's trade surplus with the United States increased from \$3.9 billion in January to \$4.3 billion in February.

Exports to countries other than the United States were up 1.1% to \$9.9 billion. Increases in exports to the European Union (+6.8%) and Japan (+12.0%) were partially offset by declines to the principal trading area "all other countries" (-3.8%). Imports from countries other than the United States edged down 0.2% to \$14.0 billion. As a result, Canada's trade deficit with countries other than the United States narrowed from \$4.2 billion in January to \$4.0 billion in February.

Motor vehicles and parts, and energy products lead gain in exports

Exports of motor vehicles and parts rose 9.7% to \$5.7 billion in February after recording an 11.3% decline in January following extended holiday shutdowns at certain manufacturing plants in the United States and Canada. Higher exports of motor vehicle engines and motor vehicle parts (+24.2%) and passenger cars and light trucks (+5.6%) were the main contributors to the section's increase. Overall, volumes were up 8.4%.

Exports of energy products increased 4.3% to \$11.2 billion, a third consecutive monthly gain. Crude oil and crude bitumen (+8.0%) led the section's monthly growth, but was partially offset by a decline in exports of natural gas (-12.2%). Overall, prices for energy products were up 6.0%.

Exports of farm, fishing and intermediate food products declined 6.8% to \$2.3 billion in February following a 6.7% increase in January. Lower exports of wheat (-12.6%) and canola (-14.6%) both contributed to the decrease.

Imports up, led by energy products

Imports of energy products increased 7.3% to \$3.9 billion in February, as volumes were up 6.0%. Imports of crude oil and crude bitumen, up 12.2% to \$2.2 billion, led the overall increase. Also contributing to the increase was the commodity grouping "other energy products," which grew \$69 million to \$131 million on the strength of higher imports of coal.

Imports of motor vehicles and parts grew 3.0% to \$7.0 billion, as all commodity groupings registered increases. Leading the way were imports of passenger cars and light trucks, which were up 3.7% to \$3.0 billion in February, following extended holiday shutdowns in January.

Imports of industrial machinery, equipment and parts rose 4.4% to a record high \$4.2 billion. The increase was attributable to higher imports of other general-purpose machinery and equipment (+12.0%), primarily conveyors. Overall, volumes increased 3.7%.

Partially offsetting the increases, imports of metal and non-metallic mineral products declined 5.6% to \$3.4 billion, as volumes decreased 5.3%. The main contributor to the decline in imports was unwrought precious metals and precious metal alloys, which fell 25.6% to \$564 million.

Chart 2
Trade balance

Note(s): Data are seasonally adjusted.

Note to readers

Merchandise trade is one component of Canada's international balance of payments (BOP), which also includes trade in services, investment income, current transfers as well as capital and financial flows.

International merchandise trade data by country are available on both a BOP and a customs basis for the United States, Japan and the United Kingdom. Trade data for all other individual countries are available on a customs basis only. BOP data are derived from customs data by making adjustments for factors such as valuation, coverage, timing and residency. These adjustments are made to conform to the concepts and definitions of the Canadian System of National Accounts.

Data in this release are on a BOP basis, seasonally adjusted and in current dollars. Constant dollars are calculated using the Laspeyres volume formula (2007=100).

For more information on seasonal adjustment, see "Seasonal adjustment and identifying economic trends."

Revisions

In general, merchandise trade data are revised on an ongoing basis for each month of the current year. Current year revisions are reflected in both the customs and BOP based data.

The previous year's customs data are revised with the release of the January and February reference months as well as on a quarterly basis. The previous two years of customs based data are revised annually and are released in February with the December reference month.

The previous year's BOP based data are revised with the release of the January, February and March reference months. To remain consistent with the Canadian System of macroeconomic accounts, annual revisions will take place in December with the October reference month rather than in June, as was previously the case.

Factors influencing revisions include late receipt of import and export documentation, incorrect information on customs forms, replacement of estimates produced for the energy section with actual figures, changes in classification of merchandise based on more current information, and changes to seasonal adjustment factors.

Revised data are available in the appropriate CANSIM tables.

Table 1

^r revised

1. International merchandise trade data are based on the North American Product Classification System 2007.

2. These are mainly low valued transactions, value of repairs to equipment, and goods returned to country of origin.

Note(s): Totals may not equal the sum of their components.

Canada's merchandise trade: An annual overview of 2013

Canada's total merchandise trade rose from \$937.1 billion in 2012 to \$966.5 billion in 2013. The percentage of total trade relative to Canada's gross domestic product of \$1.879 trillion represented 51.4% in 2013. It has remained approximately at this level for the last three years, following a number of years of decline since the 71.9% peak in 2000. In 2013, exports rose 3.7% and imports increased 2.6%. Canada's annual trade deficit with the world narrowed to \$6.8 billion in 2013 from a record \$12.0 billion in 2012.

Canada's merchandise imports totalled \$486.6 billion in 2013, as volumes grew 2.1% and prices rose 0.5%. A 5.1% increase in imports of consumer goods led the widespread growth in 2013. Gains were also recorded in imports of basic and industrial chemical, plastic and rubber products (+7.0%), aircraft and other transportation equipment and parts (+17.4%) and motor vehicles and parts (+2.6%).

Exports increased to \$479.9 billion in 2013, as prices grew 2.1% and volumes rose 1.6%. The main contributor to the growth in exports was energy products, which rose 7.9% to \$113.3 billion in 2013.

Canada's trade surplus with the United States grew from \$42.0 billion in 2012 to \$44.1 billion in 2013. Exports to the United States grew 6.0% to \$358.8 billion and imports rose 6.1% to \$314.7 billion. The share of Canada's exports to the United States increased from 73.2% in 2012 to 74.8% in 2013. The United States' share of total imports was 64.7% in 2013, up from 62.5% in 2012.

Canada's trade deficit with countries other than the United States went from \$54.0 billion in 2012 to \$50.9 billion in 2013. The trade deficit with the principal trading area "all other countries" narrowed in 2013, as imports declined 6.1% and exports grew 4.4%. Overall, imports from countries other than the United States fell 3.4% and exports declined 2.4%.

Chain Fisher real export and import values, February 2014

The monthly chain Fisher real dollar values (reference year 2007) for Canadian international merchandise trade are now available for February.

Available in CANSIM: tables 228-0061 and 228-0062.

Definitions, data sources and methods: survey numbers 2201, 2202 and 2203.

The February 2014 issue of *Canadian International Merchandise Trade*, Vol. 68, no. 2 (65-001-X), is now available from the *Browse by key resource* module of our website under *Publications*.

Data on Canadian international merchandise trade for March will be released on May 6.

For more information, or to enquire about the concepts, methods or data quality of this release, contact us (toll-free 1-800-263-1136; 514-283-8300; infostats@statcan.gc.ca) or Media Relations (613-951-4636; mediahotline@statcan.gc.ca).

Export and import price indexes, February 2014

Current- and fixed-weighted export and import price indexes (2007=100) on a customs or balance of payments basis are now available based on the North American Product Classification System 2007.

Current- and fixed-weighted export and import price indexes (2007=100) for all countries and the United States on customs basis, by Standard International Trade Classification, are also available.

Available in CANSIM: tables 228-0063 to 228-0068.

Definitions, data sources and methods: survey numbers 2201, 2202 and 2203.

The February 2014 issue of *Canadian International Merchandise Trade*, Vol. 68, no. 2 (65-001-X), is now available from the *Browse by key resource* module of our website under *Publications*.

Data on Canadian international merchandise trade for March will be released on May 6.

For more information, or to enquire about the concepts, methods or data quality of this release, contact us (toll-free 1-800-263-1136; 514-283-8300; infostats@statcan.gc.ca) or Media Relations (613-951-4636; mediahotline@statcan.gc.ca).

Electric Utility Construction Price Index, annual 2013

Construction costs for the electric utility distribution systems decreased 0.8% in 2013 compared with the 2012 annual index. Lower costs for labour (-3.4%) and construction indirects (-1.0%), which includes engineering (-1.1%) and administration and overheads (-1.0%), were the major contributors to the decrease of the index.

In 2013, construction costs for the transmission line systems slightly increased, by 0.1%, while the transmission lines component decreased 0.9%, largely as a result of a decrease in installation labour costs (-3.4%). The substations component increased 0.7%, led by a 1.2% increase in station equipment costs.

Note to readers

With each release, data for the previous year may have been revised. The indexes are not seasonally adjusted.

Available in CANSIM: table 327-0011.

Definitions, data sources and methods: survey number 2316.

For more information, or to enquire about the concepts, methods or data quality of this release, contact us (toll-free 1-800-263-1136; 514-283-8300; infostats@statcan.gc.ca) or Media Relations (613-951-4636; mediahotline@statcan.gc.ca).

Canadian Community Health Survey – Mental Health: Public Use Microdata File, 2012

The product *Canadian Community Health Survey – Mental Health: Public Use Microdata File, 2012*, is now available. Data are based on interviews with approximately 25,000 respondents aged 15 and older residing in households in all provinces.

The file includes information on a wide range of topics, such as mental health status, access to and perceived need for formal and informal services and supports, functioning and disability, and other characteristics.

The product is provided on a DVD-ROM with a built-in Beyond 20/20 application.

Definitions, data sources and methods: survey number 5015.
