## Releases

### Canadian portfolio investment abroad, 2012

Canadian investors held \$887.3 billion worth of foreign securities at the end of 2012, up 17% compared with 2011. This was the strongest growth observed since the onset of global credit and financial concerns in 2007 and 2008. The increase in 2012 came mainly from a combination of net acquisitions of foreign securities and price gains in all major stock markets during the year.

#### Equities dominate foreign assets

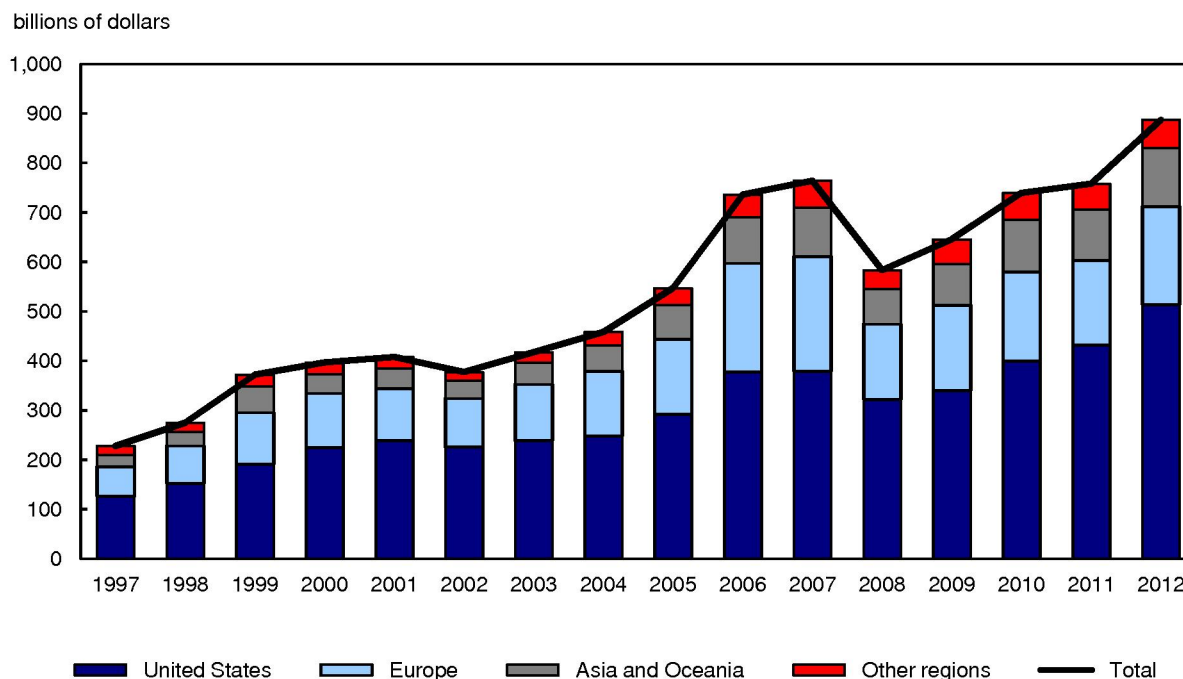

Foreign stocks totalled \$687.3 billion at the end of 2012, accounting for over three-quarters of all holdings of foreign securities. Holdings of foreign debt securities increased 19% to \$200.0 billion.

#### Canadian investment abroad widespread, led by holdings of US securities

Canadian portfolio investment abroad was spread over 100 countries at the end of 2012 with the most important destinations being the United States, the United Kingdom, Japan, France, Australia and Germany. Together, these countries represented 78% of total Canadian portfolio assets held abroad.

Canadian holdings of US securities were up 19% to \$513.9 billion. This was the largest increase since 2006 and reflected gains in US stock prices as well as net acquisitions of US securities over the year, both equities and debt. This growth was moderated by the appreciation of the Canadian dollar against its US counterpart, resulting in a downward revaluation of these assets.

**Chart 1**  
Canadian holdings of foreign securities, by major geographic area

Holdings of European securities were up 16% to \$198.4 billion at the end of 2012 after a decline in 2011. Investments in all major European countries increased in 2012. Notably, holdings of securities from the United Kingdom and France were up 15% and 20% respectively. Growth in stock markets explained most of the increase.

Canadian holdings of securities from Asia and Oceania recovered, rising 15% in 2012 following a 3% decline in 2011. Holdings in this region are highly concentrated in equity securities and benefited from gains in stock prices, especially for investments in South Korea, Hong Kong and China, which posted strong growth in 2012. Holdings of Japanese securities were stable at \$36.9 billion, against the backdrop of a strong equity market performance and the downward revaluation effect of an appreciating Canadian dollar.

### Note to readers

**Canadian Portfolio Investment Abroad** is an annual survey of Canadian investors of securities that is used to generate a detailed geographical breakdown for holdings of foreign securities. This detailed information is not available at the time of the quarterly international investment position release. However, aggregates of portfolio investment abroad at market values are available as part of the quarterly international investment position release. The current aggregates will be integrated into the international investment position at the time of the third quarter 2014 release in December, in line with the Canadian System of Macroeconomic Accounts revision policy.

Foreign securities cover equity and debt instruments issued by non-residents. Securities denominated in foreign currency are converted to Canadian dollars at year-end. The survey collects information on Canadian holdings of foreign securities at year-end, at market value and broken down by country of issuer. In this context, portfolio investment can be seen as investment undertaken primarily for the sake of investment income or capital gains. This investment excludes cross-border direct investment and reserve assets, which are other components of the international accounts.

## Income of immigrants: Saskatchewan, 2011

Data from the Longitudinal Immigration Database for Saskatchewan are now available for 1980 to 2011. Tables at the Canada level were released in *The Daily* on December 23, 2013.

### **Note to readers**

*The Longitudinal Immigration Database provides information on immigrant economic outcomes. It was created to respond to the need for detailed and reliable data on the outcome and impact of immigration policy levers. It allows the analysis of different categories of immigrants over a period long enough to assess the impact of immigrant characteristics at landing, such as education and knowledge of French or English, on their settlement outcome.*

*The database combines an Administrative Landing File with the T1 Family File through exact matching record-linkage techniques. The overall linkage rate is approximately 80%. The population includes immigrants who landed between 1980 and 2011 and who filed taxes at least once between 1982 and 2011.*

**Available in CANSIM: tables 054-0008 and 054-0009.**

**Definitions, data sources and methods: survey number 5057.**

A more detailed description of immigrant admission categories from Citizenship and Immigration Canada (CIC) is available on the CIC website ([www.cic.gc.ca/english/helpcentre/glossary.asp](http://www.cic.gc.ca/english/helpcentre/glossary.asp)).

For more information, contact us (toll-free 1-800-263-1136; 514-283-8300; [infostats@statcan.gc.ca](mailto:infostats@statcan.gc.ca)).
