The Labour Force, Week ended October 16, 1971 - Advance information.
The seasonally-adjusted unemployment rate declined to 6.7 in October from 7.1 in September, but was still above the general level of the past year.

The unadjusted rate, representing the actual unemployment as a percent of the labour force, rose marginally to 5.1 from 5.0 in September. Unemployment rose less than usual to 447,000 in October from 434,000 in September.

Employment in Canada increased by 63,000 over the September figure to a total of $8,251,000$. Ordinarily there is little change in employment between September and October. The October labour force was 8,698,000, up 76,000 from September.

Estimates (not adjusted for seasonality)

| Unemployment Rate (Unemployed as a percentage of Labour |  |  |  |
| force) | 5.1 | 5.0 | 5.0 |

Compared to a year earlier, employment in October was up by 258,000 ( $3.2 \%$ ) and the labour force by $286,000(3.4 \%$ ). There were 28,000 more unemployed than a year ago.

For further information, order the October issue of Labour Force (71-001, 20c/\$2).

Financial Flow Accounts, Second Quarter 1971 - Advance information
Financial flow data for the second quarter 1971 indicated an increased volume of borrowing and lending activity, particularly in the chartered banks sector. Financial conditions appeared little changed from the substantial casing that had taken place over the previous year. Monetary expansion cantinued at a very high rate and chartered bank liquidity was reduced only marginally from peak levels eatabliahed during the previous quarter. Interest rates moved up during the quarter, but were generally well below the peak levels established early last year.

Borrowing via conventional credit market instruments was up very sharply in the first half of 1971 ; total borrowingincreased to $\$ 6.5$ billion compared to only $\$ 3.4$ billion in the same period last year. Borrowing as a per cent of gross national expenditure almost doubled to about $15 \%$. Longer term borrowing increased by $\$ 1.8$ billion and shorter term by $\$ 1.2$ billion. Increased long-tem borrowing was accounted for principally by bond issues while mortgage borrowing remained at a high level. Bank loans and consumer credit accounted for the bulk of increased hort-term borrowing in the first half of this year while a less notable increase was recorded for commercial paper.

For further information order the Second Quarter issue of Financial Flow Accounts (13-002, $\$ 1 / \$ 4$ ).

Prices and Price Indexes (Consumer Price Indexes for Regional Cities), October 1971 - Advance Information

NOTE - A consumer price index for a particular regional city measures the movement in prices, faced by consumers, within the specified city. Thus, consumer price indexes for regional cities cannot be used to compare levels of prices between cities.
Between September and October, lower food prices were responsible for declines in all twelve regional city and city-combinations consumer price indexes. The decreases in the all-item indexes ranged from $0.1 \%$ in Saint John, Ottawa, and Vancouver to 0.7\% in Quebec City. lower quotations for most fresh produce items and many beef and pork cuts contributed to declines in the food indexes of all regional cities. Housing indexes for all cities except Montreal, rose reflecting increased rents and higher prices for many home furnishings. No change was registered in the Montreal housing index between September and October. Increased prices for mens' suits and womens' coats and lingerie, were chiefly responsible for the clothing components rising in all cities surveyed. The transportation indexes rose in ten cities reflecting higher train fares across the country and increased gasoline prices from Winnipeg west to Vancouver. Higher dentists' fees and increased prices for many toiletry items contribu ted to advances in all twelve health and personal care indexes. The recreation and reading indexes rose in ten cities; while the tobacco and alcohol indexes were unchanged from the previous month.

Balance of International Payments, Third Quarter 1971- Advance information
Advance estimates indicated that Canada's international current account transactions, hot adjusted for seasonal varlations produced a surplus of $\$ 274$ million in the third quarter of 1971. There was a $\$ 614-m i l l i o n ~ s u r p l u s$ on merchandise trade which was significantly reduced by a $\$ 340-\mathrm{million}$ deficit on non-merchandise transactions. Official international reserves rose by $\$ 142$ million while capital account transactions led to a net outflow of $\$ 132 \mathrm{million}$.

The closing spot rate for the United States dollar in terms of Canadian funds, which was 102.31 c at the end of June, fell to 100.91 c at the end of September. A rise in value in relation to the United States dollar was common to most major international currencies in the second half of the quarter following the introduction of new economic policy measures by the United States on August 15. Many currencies rose more sharply in value than the Canadian dollar which had already apprectated by about $6 \%$ vis-avis the United States dollar since it was unpegged at the end of May 1970.

Seasonally adjusted, the current account surplus continued to decline to a position of virtual balance in the third quarter of this year from $\$ 547$ million in the fourth quarter 1970. The drop in the surplus between the second and third quarters of 1971 was the result of a declining surplus balance from merchandise trade plus a sharply increased deficit on nonmerchandise transactions. Estimates indicated a growth of $1.8 \%$ in merchandise exports and $3.5 \%$ in merchandise imports. Most items of payment on account of non-merchandise Lransactions registered relatively significant increases, more than offsetting increases in receipts from interest and dividend payments, freight and shipping and other service transactions.
(continued)

For further infonation, urder the third Quarter 1971 issue of Quarterly Estimates of the Canadian Balance of International Payments (67-001, $75 \mathrm{c} / \$ 3$ ).

## Estimated Foreign Trade in Motor Vehicles and Parts, Nine Months 1971 Published only in Statistics Canada Daily and Woekly - Advance information The Canadian trade balance in motor vehicles and parts was estimated to be a surplus of $\$ 26$ million in nine months of 1971 vs a deficit of $\$ 19$ million a year carlier. The change of $\$ 45$ million: resulted from an improvement in the balance on United States trade by some $\$ 174$ million, and a widening of the deficit on trade with other countries by some $\$ 129$ million. The improvement in the trade balance with the United States could be attributed to a large drop in the deficit on trade in parts. On the other hand, the worsening of the automotive trade with other countries came mostly from increased imports of vehicles.

* As defined in division 58 of Export and Import Commodity Classifications. ** Not defined in division 58 of Export and Import Commodity Classifications.

Preliminary Statement of Canadian Trade, October 1971 - Published only in Statistics Canada Daily and Weekly

A sharp rise in imports for the month of October reduced the Canadian monthly trade surplus to less than $\$ 100$ million for the first time since November 1969. An increase of $\$ 326 \mathrm{milli}$ ion or $29 \%$ over October 1970 pushed total imports to $\$ 1,455$ million yielding a surplus on merchandise trade of $\$ 88$ million. Purchases from the United States advanced by $\$ 220$ million and those from Japan, the EEC, Commonweal th countries other than the U.K, and "Other Countries" all showed strength. Cumulative imports for the ten months reached $\$ 12,749 \mathrm{million}$, up $9 \%$ over last year. W1th exports at $\$ 14,643$ million, the year-to-date surplus stood at $\$ 1,894$ million, a decline of some $17 \%$ from last year.

The increase in imports was paced by purchases of crude petroleum, tractors and parts and office machines and computers, all increasing by more than $50 \%$ over last October. Other commodities showing continued strength included iron and steel products, wearing apparel and communications equipment. Imports of food and plastics picked up in October after being relatively weak to date this year. Demand for alrcraft products, and for chemicals, continued to decline sharply.

Year-to-year comparability of purchases of automotive products was affected by the fact that last year's levels were depressed by strikes in the North American industry. Imports increased by $\$ 155 \mathrm{million}$ or $61 \%$ over last October. However, in comparison with October of 1969; the increase was $\$ 64.5$ million or some 20\%. Demand for passenger vehicles from countries other
than the United Stares continued stromg, as imports more than doubled to $\$ 36$ million for the month.

On a seasonally adjusted basis, October imports were $\$ 180$ million oter the September level. Imports form the U.S. increased by $10 \%$; From the U.K. by $14 \%$ and from all other countries by $25 \%$.

For further information order the nctober issues of Summaty of fixports (65-002, 20c/\$2) and Summary of Imports ( $65-005,20 c / \$ 2$ ).

Retail Trade, September 1971 - Advance information
Retail sales reached $\$ 2,514,470,000$ in September 1971 an increase of $11.0 \%$ from September 1970. All trades reported increases in sales ranging from a high of $22.8 \%$ for motor vehicle dealers to a low of $2.3 \%$ for "all other" food stores. The $12.9 \%$ increase for department stores helped to make September the second best month for retailers (April was slightly better) so far this year. All provinces registered increased sales ranging from a high of $16.2 \%$ for British Columbia to a low of $7.5 \%$ for Newfoundland. For the year to date, the greatest recovery from 1970 occured in New Brunswick and Saskatchewan, each with an increase of $10.5 \%$ an and British Columbia, up $10.0 \%$ over the comparable period last year.

Further details will be contained in the Statistics Canada publication, Retail Trade of September $1971(63-005,30 c / \$ 3)$.

Indexes of Real Domestic Product (Industrial Production), September 1971 Advance information

The seasonally adjusted index of industrial production increased by $0.3 \%$ in September to a level of 179.7 from 179.1 in August. All divisions contributed to the increase. In manufacturing, non-durable goods output increased, while the production of durable goods decreased.

Further information will be provided in the September issue of Indexes of Real Domestic Product by Industry ( $61-005,30 c / \$ 3$ ).
