Industry Selling Price Indexes
Industry selling price indexes $(1961=100)$ were higher in February than in January for 46 manufacturing industries, lower for 22 and unchanged for 31.

In terms of the relative importance of industries within manufacturing, the more notable changes in February were increases recorded in the foods and beverages group reflecting higher price levels for the slaghtering and meat packing plants, butter and cheese plants, butter and cheese plants, and soft drink manufacturers industries. Prices were generally higher in the wood products group with the more pronounced increases occurring in the sawmills industry. Moderate declines were registered in the primary metals, miscellaneous manufacturing and paper and allied products groups.

The arithmetic average of the 99 industry indexes increased in February to 120.7 from 120.2 in January. The average increase for those industries showing higher price movements was $1.3 \%$, while the comparable figure for those showing decreases was $0.9 \%$.

* Indexes not available at this level of aggregation.

General Wholesale Index
The general wholesale index ( $1935-39=100$ ) moved up $0.4 \%$ in February to 286.3 from 285.3 in January. It was $0.9 \%$ lower than the February 1970 index of 288.9 . Five of the eight major group indexes were higher, while three declined.

The animal products group index moved $2.1 \%$ higher to 324.2 from 317.5 on price increases for livestock, fresh meats and hides and skins. An advance of $1.0 \%$ to 377.8 from 374.2 in the wood products group index reflected higher prices for spruce, cedar and fir. The textile products group index advanced $0.9 \%$ to 260.5 from 258.1 mainly due to higher prices for miscellaneous cotton products. Increases of $0.2 \%$ or less occurred in two major group indexes; non-metallic mineral products to 223.5 from 223.1 and chemical products to 229.2 from 229.1.

The non-ferrous metal products group index moved down $1.3 \%$ to 256.5 from 260.0 on lower prices for copper and its products and silver. A decline of $0.8 \%$ to 240.9 from 242.9 in the vegetable products group index reflected price decreases for livestock and poultry feeds, raw rubber and unmanufactured tobacco.

Growth Patterns in Manufacturing Employment, by Counties and Census Divisions, 1961-1967 (31-505, \$1.50)

This is the second publication on growth patterns in manufacturing. The first covered the years 1949-59-1961-65. The publication is of interest to those concerned with regional development. It uses the industry mix-regional share techniques for displaying employment growth patterns in Canada, and is based on data from the Annual Census of Manufactures.

The technique indicates whether a region had a rapid-growth or slowgrowth industrial mix (in comparison with the regional average for all industries), and whether the region obtained an increasing or decreasing regional share of this industrial distribution (in comparison with the national growth in the relevant individual industries).

The data are additive geographically, so that an interest in regions larger than counties or census divisions can be accomodated.

A full explatation of methods and concepts used is included in the report.
