Preliminary Statement of Total Canadian Exports, August 1971 - Published only in Statistics Canada Daily and Weekly

Canada's August exports totalled \$1,423 million, an increase of \$211 million or 17.4% over August 1970. Shipments to the United States advanced strongly by \$199 million, or 26.6% to \$944 million. Moderate gains of \$18 million were recorded in exports to both the United Kingdom and Latin America and a smaller increase occurred to "other countries", while Canadian markets in Japan and the European Economic Community declined slightly from high levels of a year ago. Exports to other Commonwealth and preferential countries declined 31%.

Cumulative exports reached \$11,609 million for the eight months of 1971, a growth of \$461 million or 4.1% over the same period last year. Exports to the U.S. rose \$610 million or 8.4% to \$7,874 million, and much smaller increases took place in shipments to Latin America and "other countries". Shipments to the remaining areas however declined by \$195 million. The proportion of Canadian exports shipped to the U.S. increased from 65% to nearly 68% in the 8 months of 1971, but the share stood at 70% in the corresponding period of 1969.

The main impetus to the increase in August exports was provided by shipments of motor vehicles and parts, increasing by \$115 million over a low figure of last year. Exports of wheat, crude petroleum and natural gas and lumber continued to show strength. Shipments of these commodities together with wood pulp were some \$95 million higher. Exports of ores of iron and copper metals however declined from the high levels of August 1970.

Preliminary commodity information for exports to the United States is introduced in this issue for the first time. Some \$100 million or about half of the increased exports to this country in August were accounted for by automotive products. Shipments of lumber rose nearly \$40 million and those of petroleum and natural gas almost \$20 million. Smaller increases occurred in the exports of many other commodities, but shipments of iron ores declined \$9 million.

After seasonal adjustment, Canada's exports in August reached a record level of \$1,601 million, with the bulk of the increase over the preceding month occurring in transactions with countries other than the United States and the United Kingdom. The rise in exports which began in the first quarter of 1971 appears to be extended in the third quarter, before the anticipated impact of the new economic policy in the United States.

INDUSTRIAL PRODUCTION

Indexes of Real Domestic Product (Industrial Production), July 1971 - Advance information.

The seasonally adjusted index of industrial production decreased by 0.1% in July to a level of 175.6 from 175.7 in June. Both mining and manufacturing contributed to the decline, while utilities increased. In Manufacturing, non-durable goods output fell, while the production of durable goods remained unchanged.

Further information will be provided in the July issue of "Indexes of Real Domestic Product by Industry" (61-005, 20¢/\$2).
