#### Census of Manufactures Data Available Through Computer.

Principal statistics of manufacturing industries of Canada are now available as time series from 1961 through 1970 from the CANSIM data bank. User-selected series may be purchased on tapes or computer printouts. A special tape of all series (Census of Manufactures Tape) is available for \$75 on user-supplied tape, including mailing and handling. Tapes are in DATABANK format, readable by IBM 360 (or compatible) computers. For further information contact Miss Mary Lennox, (613-995-7406) CANSIM, General Time Series Staff, Statistics Canada, Ottawa K1A 0Z8.

A cross-sectional summary tape (1961-1970) is also available at the same price. For further information contact J. McBurney, (613-992-7406), Manufacturing and Primary Industries Division, Ottawa K1A 0V6.

**Employment, Earnings and Hours December 1972 – Advance Information.**

The first estimate of the seasonally-adjusted industrial composite index of employment (1961=100) indicates a decline of 0.6% in December 1972 from the level recorded in November. All industry divisions contributed to a 2.2% rise in average weekly earnings.

Owing to a lower than average rate of response, December information is limited at this time, and data shown have a lesser degree of reliability than those usually shown for the first estimate.

*Industrial composite is the sum of all industries with the exception of agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence. All statistics are based on returns received from employers having 20 or more employees in any month of the year.*

Preliminary data for November 1972, showed a slight decline in the industrial composite index of employment for Canada. Gains in forestry, manufacturing, trade and service were offset by declines in the remaining industry divisions, except in mining which showed no change. All provinces showed rises over the month except Nova Scotia, Ontario and British Columbia.

Average weekly earnings rose slightly to \$153.19 at the Canada composite level in November. Gains were recorded in all industry divisions except service, which edged down. All provinces contributed to this advance except Newfoundland.

Average weekly hours of hourly-rated wage-earners rose slightly in mining and declined slightly in manufacturing in November; in construction a 1.0 hour advance to 40.3 hours was recorded.

Average hourly earnings in mining rose to \$4.56 from \$4.50 while a 2¢ increase was recorded in both manufacturing and construction (to \$3.65 and \$5.38, respectively).

Detailed information for October and November will be published in the December 1972 issue of *Employment, Earnings and Hours* (72-002, 40¢/\$4) and is also available from Mr. R. Ouellette (613-992-5613), Labour Division, Statistics Canada, Ottawa K1A 0V2.

(see table on page 2)

**Estimates of Labour Income, December 1972 – Advance Information.**

Total labour income, not adjusted for seasonal variation, was estimated at \$4,959.2 million in December, 13.4% more than the revised figure for the same month of 1971 (\$4,372.8 million).

For 1972, estimated total labour income was \$56,853.0 million, 10.9% more than the previous year. In the goods-producing industries, wages and salaries advanced by 8.4%, and in the service-producing industries 12.0%.

Further details will be published in *Labour Income*, December 1972 (72-005, 20¢/\$2). Additional information is available on request from Mrs. G. Gauthier (613-995-8067), Labour Division, Statistics Canada, Ottawa K1A 0U2.

(see table on page 3)

**Salaries of Academic Staff by Age, 1971-72 – Published only in the Statistics Canada Daily and Weekly.**

The age profile of teachers in Canadian universities and colleges shows that 61.9% are under 40 years of age, 24.7% are 41 to 50 and 13.4% are older than 50. The under-40 group contained 67.4% of the teachers in the Atlantic provinces but only 61% of those in other regions.

Salaries in general increase with age. Teachers 25 and under average \$10,449; but they receive \$17,382 at 40; \$20,458 at 50; \$21,817 at 64; \$20,200 at 65 and over. For more information, contact Mrs. Louise Desramaux, Education, Science and Culture Division, Statistics Canada, Ottawa, K1A 0Z5.

**Retail Prices and Living Costs Service Bulletin, Volume 2, Number 4, 5 and 6, (62-005, \$2 a year).**

In 1972 food was responsible for 45% of the advance in the total Consumer Price Index. In the last six months of the year this figure rose to 55%. Price rises for meats, fresh produce and eggs were particularly steep. The 1971 and 1972 increases in food prices contrasted markedly with the declines which occurred in the latter part of 1970 (the "super-market price war" period), and with the long-range similarity of increases in prices of food and prices of other items – since 1961 food prices rose 47.1%, non-food prices 41.7%; since 1967 the advances have been 25.8% and 25.0%.

It is possible to relate movements of the "food at home" component of the Consumer Price Index, the selling prices of food manufacturers, and the index of farm prices of agricultural products, although they are not strictly comparable. From 1961 to 1969 the annual movements of retail food prices corresponded broadly to those of food prices at the manufacturers level, but less closely to those at the farm level, partly because of depressed grain prices in the last half of the period. In 1970 retail food prices declined in the second half of the year, manufacturers food prices were relatively unchanged, and there were sharp declines in farm livestock prices. Since 1970, advances of retail food prices were somewhat stronger than those of manufacturers food prices, but farm food prices remained relatively stable until mid-1971, when they started to move up sharply.

.. figures not available. - f - first estimate based on a limited number of returns. - p - preliminary figures. - r - revised figures.

Most "free-world" industrialized countries have had rising consumer prices over the last several years and, since 1967, Canada has faced somewhat less price advance than most countries, both with respect to foodstuffs and non-food items. Even last year the all-items Consumer Price Index rose less rapidly in Canada than in other countries, with the notable exception of the U.S.A. and Japan. However, with food prices generally advancing faster than those of non-food items (both in Canada and abroad) last year the rate of increase in Canada's consumer food price index accelerated to the 7%-10% rate experienced in many other countries.

Comparing Canada with the U.S.A., the all-items

Consumer Price Index movement was very similar through the 1960s until the beginning of 1969, when the US prices rose more rapidly until mid-1971; since then Canadian prices have risen more sharply. Food price movements were similar between the two countries from 1967 to 1969. Then Canadian food prices declined in the second half of 1970, subsequently rising sharply in the first 8 months of 1971, back to the level of the US food index which had been climbing more steadily during this period. From August 1971 to June 1972, food prices increased at a slightly slower rate in Canada and the US, but since then Canadian food prices have been advancing much more sharply than those in the United States.

<sup>2</sup> Includes fishing and trapping.

**Prices and Price Indexes, General Wholesale Index,**  
January 1973 - Advance Information.

The general wholesale index (1935-39=100), moved up 2.5% in January 1973 to 336.4 from the revised December 1972 index of 328.3. It was 12.3% higher than the January 1972 index of 299.6. All eight major indexes were higher.

The animal products group index rose 3.3% to 405.2 from 392.2 reflecting price increases for

livestock, fresh and cured meats, boots and shoes, fishery products and fresh milk. Higher prices for worsted yarns, cotton knit goods, raw cotton, cotton fabrics, and domestic and imported raw wool were mainly responsible for a rise of 3.0% to 291.6 from 283.0 in the textiles products group index. The vegetable products group index moved 2.7% higher to 288.4 from the revised December index of 280.7 on price increases for unmanufactured tobacco, grains, potatoes, livestock and poultry feeds, and sugar and

(continued)

its products. The wood products group index moved up 2.3% to 477.2 from 466.3 on higher prices for fir, cedar and spruce. Price increases registered for petroleum and its products resulted in an advance of 2.3% in the non-metallic mineral products group index to 240.9 from 235.4. An increase of 2.2% to 278.3 from 272.3 in the non-ferrous metal products group index reflected higher prices for copper, silver and zinc. The iron products group index moved up 1.5% on price increases for rolling mill products and scrap iron and

steel. The chemical products group index edged up to 250.5 from 249.0.

*(The General Wholesale Index, which advanced 12.3% from January 1972, contains relatively few final product price indexes for commodities such as consumer durable goods, whose prices have changed little during the past year. The Industrial Selling Price Index for manufacturing, which advanced 6.7% during the same period, does include such products.*

#### Industry Selling price Index: Manufacturing, January 1973 - Advance Information.

The industry selling price index (1961=100) for total manufacturing moved up 1.5% in January 1973 to 132.8 from 130.8 in December. It was 6.7% higher than the January 1972 index of 124.5. Of the 101 industry indexes included in the total, 68 were higher, 12 declined and 21 were unchanged.

The more notable changes in January were increases in the foods and beverages group, reflecting higher prices in the slaughtering and meat packing, feed manufacturers, and poultry processors industries. The wood products group, which has been rising steadily since November of 1971, moved higher in response to price increases in the sawmills and planing mills, and sash, door and other millwork industries. Advances in the petroleum and coal group reflected higher prices in the petroleum refining industry. The primary metals group continued to rise on increases recorded in the smelting and refining, and in the iron and steel mills industries. Decreases in January were relatively insignificant.

For further information, order the January issue of *Prices and Price Indexes* (62-002, 40¢/\$4) or contact Mr. A.J. Byrne (613-992-6216), Prices Division, Statistics Canada, Ottawa K1A 0V6.

(see table on next page)

#### Real Domestic Product, December 1972 - Advance Information.

Canada's seasonally adjusted index of real domestic product increased by 0.4% in December to 183.1 from the upward revised level of 182.3 in November. (Real domestic product has been revised marginally for 1972 to incorporate the latest crop estimates for agriculture. The indexes affected by this revision are given in the table on the next page).

Manufacturing, transportation, agriculture and forestry contributed the major increases in December; mining and fishing output decreased.

Manufacturing increased strongly for the fourth consecutive month - with non-durables accounting for about two-thirds of the increase in manufacturing. The forestry increase was attributable to increased production of logs for pulpwood.

In the fourth quarter the Canadian economy as measured by real domestic product resumed its growth following a pause in the third quarter. Gains were widespread in the fourth quarter with mining, manufacturing, utilities, transportation, and retail trade contributing major increases.

For mining, a recovery from the effects of a strike in iron mining in the third quarter was a significant

factor. For manufacturing, both durables and non-durables advanced strongly. The slightly stronger durables advance was led by motor vehicles and motor vehicle parts and accessories, the wood industries and the primary metal industries.

Rail and air transport were mainly responsible for the increase in transportation output. For rail transport, the end of the iron mining strike in the third quarter was reflected in the increased carriage of iron ore in the fourth quarter. In addition, the B.C.

stevedoring strike, which terminated in August, had constricted the flow of goods in the third quarter and thus indirectly contributed to the fourth-quarter increase in rail transport.

In retail trade motor vehicle dealers, and to a lesser extent fuel dealers, led the increase.

# **Canada's Foreign Trade in Motor Vehicles and Parts, 1972** - Published only in Statistics Canada Daily and Weekly.

Except for 1970, there was a deficit in Canada's international trade in automotive products in the years 1965 to 1972, and the cumulative deficit stood at close to \$2,900 million. Of this total, \$1,900 million or some two-thirds was attributable to trade with the United States.

From the surplus of \$95 million in 1970, Canada's trade in automotive products, changed to a deficit of \$113 million in 1971, which more than quadrupled to a deficit of \$511 million in 1972. This estimate was higher than that of any year since 1966, when the deficit was \$637 million.

Contributing to the expansion of nearly \$400 million in the deficit in 1972 were contractions of \$164 million in surplus for motor vehicles and \$43

million for snowmobiles, together with an increase of \$191 million in the deficit from motor vehicle parts. The shutdowns of the assembly plants at Ste Thérèse and Oshawa for conversion and for model change had an impact on the vehicle trade balance in 1972.

A turnaround of \$235 million in the balance with United States, from a surplus of \$194 million to a deficit of \$41 million was produced by a 19% increase in imports to \$4,666 million and a 12% gain in total exports to \$4,625 million. Canada's deficit on trade with overseas countries expanded more than 50% to \$470 million in 1972. Exports at some \$210 million were virtually unchanged, but imports rose about 30% to nearly \$680 million, with two-thirds of the increase being attributable to vehicles. Imports of automotive products from Japan were some \$125 million higher in 1972, with the unit values of imported vehicles rising close to 18% between year-end 1971 and 1972.

# Consumer Credit, December 1972 - Advance Information.

Selected credit holders reporting monthly showed \$11,648 million outstanding on their books at the end of December, 18.1% more than a year earlier.

Personal cash loans by chartered banks rose to \$7,145 million, up 23.7% from a year earlier; and life insurance companies' policy loans were up 2.0% to \$800 million, but personal cash loans made under the Small Loans Act fell 12.7% to \$384 million. In addition, sales finance and consumer loan companies held \$1,038-million balances of retail instalment sales' paper, an increase of 16.5%; and the \$1,241-million outstandings of personal cash loans represented an expansion of 19.8%.

The outstanding balances of other monthly reporters -- Quebec savings banks, department stores and furniture, T.V., radio, and household appliances stores -- rose 10.8% to \$1,040 million, over the year.

Credit holders reporting quarterly -- other retail stores, other creditcard issuers, credit unions and caisses populaires and public utilities -- reported outstanding balances of \$3,022 million for the third quarter, 13.5% more than a year earlier.

Total outstanding balances had reached \$14.112 million at the end of the September quarter; a level 16.3% higher than that attained for the corresponding quarter of the previous year.

For further information, order the December issue of *Consumer Credit* (61-004, 20¢/\$2).

## New Residential Construction January 1973 - Advance Information.

For further information order *New Residential Construction*, January 1973 (64-002, \$4 a year, \$6.40 outside Canada).

## Weekly Railway Carloadings, February 14 1973 - Advance Information.

Railways in Canada loaded 3.9 million tons of revenue carload freight during the 7-day period ending February 14. This was 10.6% more than in the comparable period of 1972. Year-to-date loadings increased 19.3%.

For further information order the February issue of *Railway Carloadings* (52-001, 20¢/\$2).

# Department Store Sales and Stocks, December 1972 - Advance Information.

Department store sales reached \$547.2 million during December 1972, an increase of 10.5% from the \$495.2 million registered in December 1971.

Sales increased in all departments but two. The greatest increase was in sales of plumbing, heating and building materials (57.8%) followed by gasoline, oil, auto accessories, repairs and supplies (34.9%) and infants' and children's wear and nursery equipment (21.8%). Declines were experienced by boy's clothing and furnishings (3.8%) and men's furnishings (0.7%). Increased department store sales were reported in all provinces. They ranged from 15.0% in Alberta to 8.4% in Ontario.

The value of department store sales in 1972 was \$3,687.9 million, up 15.3% from \$3,197.3 million in 1971.

The value of stocks held in December 1972 was \$852.7 million, up by 11.8% from December 1971. Inventory increases were led by plumbing, heating and building materials (76.6%). Declines ranged from 17.8% for food and kindred products to 1.6% for women's and girl's hosiery.

Further details will be contained in *Department Store Sales and Stocks*, December 1972 (63-002, 20¢/\$2).

## Department Store Sales by Regions, January 1973 (63-004, \$1 a year).

During January 1973, department store sales rose in Canada by 11.8% over the corresponding month last year, with regional increases as follows: Atlantic Provinces, 14.5%; Quebec, 15.6%; Ontario 7.2%; Manitoba, 13.7%; Saskatchewan, 22.0%; Alberta, 22.7% and British Columbia, 8.1%.

**Railway Carloadings, January 1973 - Advance Information.**

Railways in Canada loaded 17.6 million tons of revenue freight January 1973, up 21.5% over the previous January. Carloads increased 17.5% to 310,987. Receipts from United States connections increased 21.1% to 2.14 million tons leaving total traffic carried 21.4% higher at 19.7 million tons.

Commodities showing major tonnage increases included wheat, other grain, coal, sulphur and pulpwood chips.

For further information order January issue of *Railway Carloadings* (52-001, 20¢/\$2).

**Railway Freight Traffic, 1971 - Advance Information.**

Railways operating in Canada moved 235.8 million tons of revenue freight in 1971, just over 1% more than in the preceding year.

With the exception of a 2.4% increase in Nova Scotia, gains made by the railways were confined to the three most westerly provinces and the Territories where tonnage increased 15.1%.

On a commodity basis, inedible crude materials accounted for about half the tonnage carried and was down nearly 1% from 1970. The next largest category, fabricated materials, was down 2.0% while food, feed and beverages rose 8.0%.

**Coal and Coke Statistics, December 1972 - Advance Information.**

Raw coal production jumped 39.4% to 2.41 million tons in 1972 from 1.73 million the previous year. Imports decreased to 1.02 million tons from 1.13 million. Industrial consumers used 1.92 million tons of coal (up by 66,174 tons) and 441,684 tons of coke, (down 64,761 tons).

For further information, order the December issue of *Coal and Coke Statistics*, (45-002, 30¢/\$3) or *Energy Statistics Service Bulletin* (57-002, \$3), or contact Ian Cavanagh, (613-992-4021), Energy and Minerals Section, Statistics Canada, Ottawa K1A 0V6.
