Canada's Mineral Production

Billions of Dollars

Source: Canada's Mineral Production, Preliminary Estimate (26-202)

Divorced/Separated Workers, 1977

Of 618,000 divorced or separated (annual average, 1977) persons in the civilian non-institutional working-age population, 406,000 were in the labour force. This 3.8% included 171,000 males (42.1%) and 235,000 (57.9%) women. Of married persons in the labour force, 65.7% were men and 34.3% women.

Of the 369,000 employed out of the 406,000, 155,000 (42.0%) were men and 214,000 (58.0%) women. (Among employed married persons women represented only 33.2%). Employed divorced or separated persons are generally older than employed married persons... but enjoy about the same education. Almost 79% of employed divorced or separated men either did not have children or did not have their children living with them and an additional 4.5% had children who were 17 to 24 years of age. In contrast, about 29% of employed married men did not have children and an additional 6.4% had children 17 to 24 years of age. A slightly lower percentage of employed divorced or separated women than employed married women had children (57.5% vs. 63.6%). A major difference is that only 12.1% of employed divorced or separated women had children less than six years of age compared with 21.2% of employed married women.

Of the 37,000 divorced or separated persons who were unemployed 16,000 (43.2%) were men and 21,000 (56.8%) women. (Among unemployed married persons, women represented 50.8%.) As with the employed, the unemployed divorced or separated persons are generally older than unemployed married persons (56.8% of divorced or separated were 35 years or over compared with 46.4% of married persons).

The comparison of the labour force activities of divorced or separated persons with married persons by personal characteristics yields two major conclusions:

- divorced or separated men have a lower participation rate and a higher unemployment rate than married men
- divorced or separated women have a higher participation rate than married women but the unemployment rate is about the same for the two groups.

Citizenship For 123,655

In 1977, citizenship was granted to 123,655 applicants, 6,379 more than the preceding year. Approximately 52% resided in Ontario, 18% in Québec, British Columbia (17%), the Prairies (11%), the Atlantic provinces, the Yukon and the Northwest Territories (2%). Although the 1976 Census indicated 76% of Canada's population lived in urban areas and 24% in rural areas there was a higher concentration of urban dwellers among persons granted citizenship during 1977: 95% resided in urban areas and 5% in rural areas... former citizens of the United Kingdom numbered 24,354 (approximately 20% of the total). Comparatively large numbers were previously citizens of Italy (14,250, 12%), India (6,805, 6%), the Philippines (5,637, 5%) and China (4,723, 4%). Of major groupings, approximately 45% previously owed allegiance to countries which are part of the British Commonwealth, 33% to European countries, 15% to Asiatic countries, 2% to the United States. The remaining 5% previously were citizens of other non-Commonwealth countries in different parts of the world (particularly Latin American countries).
