## OVERVIEW

- Imports Rise While Exports Fall

In January, imports rose by $5.0 \%$ to $\$ 11.5$ billion after registering little change in the previous month. The value of exports fell by $2.9 \%$ to $\$ 11.6$ billion, its lowest level in one year.

- Manufacturing Shipments: Lowest Level in Three Years

In January, Canadian manufacturers' shipments fell $1.5 \%$ to $\$ 23.4$ billion, the lowest level in three years.

This issue also includes information on seeding intentions for major crops in 1991, indicators of science and technology and culture.

## Imports Rise While Exports Fall

In January, imports rose by $5.0 \%$ to $\$ 11.5$ billion after registering little change in the previous month. The introduction of the Goods and Services Tax (GST) and the elimination of the Federal Sales Tax (FST) appears to have had a strong effect on imports. The net effect of these changes was to lower prices, and consequently boost imports for automotive products ( $+30.1 \%$ ) and machinery and equipment ( $+11.5 \%$ ). On the other hand, imports of consumer goods were relatively flat, which is consistent with higher prices resulting from the application of the GST and with a recessionary situation.

The value of merchandise exports fell by $2.9 \%$ to $\$ 11.6$ billion, their lowest level in one year. Exports of automotive products continued to
(continued on page 2)

## ... Imports Rise While Exports Fall

decline as exports of cars, trucks and parts fell by $9.8 \%$, accounting for over two-thirds of the total decline in exports. Exports of energy products also decreased ( $-5.3 \%$ ), mainly due to lower prices of crude oil.

For further information, order Preliminary Statement of Canadian International Trade (catalogue number 65-001P) or contact International Trade Division at (613) 951-1711.

## Manufacturing Shipments: Lowest Level in Three Years

In January, Canadian manufacturers' shipments fell $1.5 \%$ to $\$ 23.4$ billion, the lowest level in three years. This represented a cumulative decline of $8.7 \%$ from their peak in September 1989. The January decline was widespread: shipments fell in 19 of the 22 industry groups. Decreases in electrical and electronic products ( $-9.2 \%$ ), fabricated metals $(-5.2 \%)$, and wood ( $-8.0 \%$ ) industries were partly offset by an increase in the paper and allied products industry

Inventories fell $1.4 \%$ to $\$ 36.8$ billion, after registering little change in the previous three months. A major decrease in refined petroleum products and a decline in the chemical products industries were partly offset by increases in electrical and electronic products and primary metal industries.

The inventories to shipments ratio remained at 1.58 after rising in the previous two months.

Unfilled orders fell by $0.7 \%$ to $\$ 26.5$ billion. This represented a cumulative decline of $13.0 \%$ from the level in October 1989. New orders decreased

$1.2 \%$ to $\$ 23.2$ billion, following declines averaging $1.1 \%$ in the previous four months.

For further information, order Monthly Survey of Manufacturing (catalogue number 31-001) or contact Industry Division at (613) 951-9497.

## Seeding Intentions for Wheat Drop

In 1991, Canadian farmers intend to seed 32.7 million acres with all types of spring wheat. This represents a decrease of about $3 \%$ from 1990 . The area seeded to durum wheat is expected to be 5.5 million acres, unchanged from last year.

According to seeding intentions, the total area seeded to oilseeds in 1991 is expected to be 10.3 million acres, $8 \%$ above the area seeded in 1990. The area intended for canola is $9 \%$ above last year's at 7.1 million acres. For flaxseed, the area is expected to remain relatively unchanged. Eastern farmers intend to seed a record 1.4 million acres of soybeans, $15 \%$ more than in 1990.

The total area that Canadian farmers intend to seed with coarse grains is estimated at 18.6 million acres, slightly below last year. The expected area for barley is unchanged from 1990. The intended
area of corn for grain is 2.6 million acres, also essentially the same as 1990 . The area seeded with oats is expected to fall to 4.1 million acres.

Western farmers expect to increase their areas seeded with specialty crops by $20 \%$ to 2.1 million acres in 1991. The area of dry peas is expected to increase by $85 \%$ to 610 thousand acres. For mustard seed, the area is expected to decline by $25 \%$ to 445 thousand acres. The area seeded with canary seed is expected to decline $17 \%$, while the intended areas of lentils and sunflower seeds are up $62 \%$ and $27 \%$ respectively.

Concerned with the low soil moisture reserves in most regions of the Prairies, farmers intend to keep 21.2 million acres in summerfallow, a level similar to last year.

For further information, order Field Crop Reporting Series No. 2, March Intentions of Principal Field Crop Area, Canada, (catalogue number 22-002) or contact Agriculture Division at (613) 951-8717.

## NEW FROM STATISTICS CANADA

## Indicators of Science and Technology, 1989

A new Statistics Canada publication, Indicators of Science und Technology, presents the results of a survey on the use and planned use of 22 advanced technologies in Canadian manufacturing industries, and compares these results with those of a similar American survey. Here are some of the highlights of the publication:

- In $1989,88 \%$ of Canadian manufacturing shipments were made by establishments using at least one of the 22 technologies surveyed. These establishments represented $48 \%$ of Canadian manufacturing establishments.
- In terms of shipment value, the five most used technologies are programmable controllers ( $64 \%$ ), computers used for control on the factory floor ( $50 \%$ ), computer-aided design and/or computer-aided engineering (49\%), material requirements planning $(49 \%)$ and local area computer networks for the exchange of lechnical data ( $41 \%$ ).
- In terms of shipment value, $20 \%$ of small establishments (with annual shipments of less than $\$ 10$ million) used at least one technology, whereas $98 \%$ of establishments with annual shipments of $\$ 500$ million or more did so.
- Among the establishments that export at least half of their production, $95 \%$ (in terms of shipment value) use at least one technology and $74 \%$ use at least five. In comparison, only $76 \%$ of establishments that do not export (in terms of shipment value) use at least one technology, and $26 \%$ use at least five.
- In almost all cases. American establishments make a greater use of technology than Canadian establishments, regardless of the industry and the number of employees.
For further information, order Indicators of Science and Technology 1989, or contact Services. Science and Technology Division at (613)951-9919.

## Focus on Culture

Canada has just released its Spring 1991 issue of Focus on Culture. This issue looks at Canadian-controlled publishing houses from the point of view of their linguistic affiliation, studies the evolution of funding for dance companies over the period from 1982 to 1988 , and presents results of a survey of periodicals. Here are some highlights of the publication:

- The period between 1982-1983 and 1988-1989 was an era of expansion for Canadian-controlled publishing houses. The number of publishing houses with revenues over $\$ 50,000$ rose from 207 to 273 and their sales posted a real increase of $44 \%$ after allowing for inflation.
- Over half of the 1,534 periodicals produced by Canadian publishers in the 1988 -89 fiscal year were published in English, $22 \%$ were published in French, and $16 \%$ were bilingual (English and French). Forty-seven publications in languages other than English and French accounted for the remaining $3 \%$.
- Since 1982, earned funding (primarily through box office sales) has consistently remained at $43 \%$ or less of total revenues realized by dance companies. The remainder of total revenues came from government grants and corporate and individual donations.
For further information, order Focus on Culture (catologue number $87-004$ ) or contact Education. Culture and Tourism Division at (613)951-1566.

## CANSIM Main Base Series Directory <br> 1991

The 1991 CANSIM Main Base Series Directory is now available as a printed document or on compact disc (CD. ROM).
The directory serves as a guide to data contained in the CANSIM Time Series Data Base. Access to this data base is available world. wide through a number of on-line distributors.

To make searching through the CANSIM Main Base Series Directory easier and faster, a personal computer-searchable version is available on CD-ROM. The CD-ROM also contains a thesaurus of terms used by Statistics Canada, thereby helping in the search for information. Access to this reference material, and search and display software, is easy. A few key strokes at a personal computer will give information on topics ranging from farm cash receipts for livestock in Alberta to retail gasoline prices in Newfoundland.

The publication with semi-annual amendments costs $\$ 125$; StatCan: 1991 CANSIM Durectory Disc (compact disc) with a semiannual update costs $\$ 199$.

For more information about the 1991 CANSIM Main Base Series Directory, contact the Electronic Dato Dissemination Division (613-951-8200; FAX:613-951-1134).

## CURRENT TRENDS

After a monthly decline of $0.7 \%$ in November. gross domestic product at factor cost fell $0.2 \%$ in December.

The Consumer Price Index registered a year-overyear increase of $6.8 \%$ in January, the highest in over seven years.

In January, Canadian manufacturers' shipments fell $1.5 \%$ to $\$ 23.4$ billion, the lowest level in three years.

## Composite Leading Indicator

\% change,

The leading indicator maintained its downward trend in December, dropping by $0.6 \%$, slightly less than the $0.7 \%$ drop in November.

In February, the unemployment rate rose to $10.2 \%$, a full three points above the eight-year low in March 1990.

In January, imports rose by $5.0 \%$ to $\$ 11.5$ billion Exports fell by $2.9 \%$ to $\$ 11.6$ billion.
