The June-to-July increase in the labour force and in the number of employed was associated with stum dents entering the labour market at the end of the school term. An estimated 296,000 teenagers entered the labour force during the month; a silghtly larger number of persons in this age group found fobs. In July, the labour force was 338,000 , or $4.3 \%$, higher than in July 1966. Employment was 298,000 , or $4.0 \%$, higher than a year earlier; unemployment was up 40,000.

Employment Agriculture accounted for 76,000 or about one-fourth of the June-tomjuly employment gain, a normal advance for the season. Non-farm employment increased by 198,000 , a substantially larger increase than 18 customary at this time of year. In non=farm industries, employment gaina between June and July were general. Gains in employment were largest in commulty, business and personal service $(136,000)$, trade $(69,000)$ and transportation, commincation and other utilities $(46,000)$. The increase in employment from July 1966 was shared by all regions; gains ranged from $1.3 \%$ in the Prairie region up to $5.1 \%$ in British Columbia.

Unemployment As usual, unemployment showed little change between June and July. The estimate of 284,000 was $40,000 \mathrm{higher}$ than a year earlier.
