MONTHLY REVIEW OF BUSINESS STATISTICS

Vol. XI

OTTAWA, SEPTEMBER, 1936

No. 9

DOMINION STATISTICIAN: R. H. COATS, LL.D., F.R.S.C., F.S.S. (Hon.)
BUSINESS STATISTICIAN: SYDNEY B. SMITH, M.A.

CURRENT ECONOMIC CONDITIONS IN CANADA

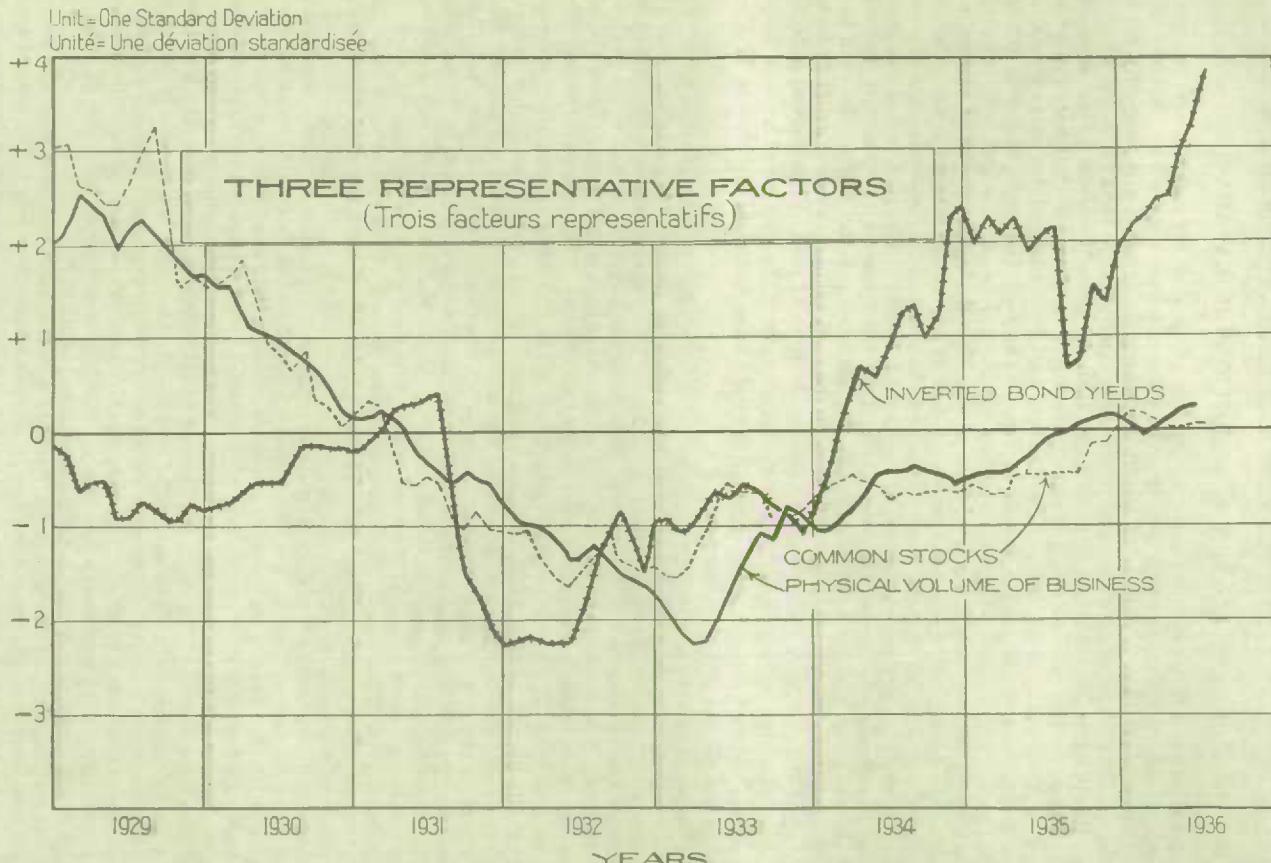

Conditions showed further improvement during August, most of the major factors recording significant advances over the preceding month. The index of business operations reached a new high point since May, 1930, a number of factors surpassing the levels of the prosperity period culminating in 1929. The volume of export trade was a bright spot of the month, the adjusted gain over the preceding month having been more than 10 p.c. Wholesale prices advanced sharply in August for the third consecutive month, breaking away from the stationary conditions established at the beginning of 1934. The rise was mainly occasioned by adverse weather conditions, leading to a considerable reduction in Canadian crops. The marked advance in high-grade bond prices continued in August, extending the upward trend in evidence for nearly a year; bond yields are now at a lower level than at any time during the period of observation from 1919 to the present. Ontario bond prices touched in August the maximum since the first of the century. The decline in bank deposits was less than normal for the season, the adjusted index being slightly more than maintained at the first of August. The gain in common stock prices was of moderate proportions, the index having been 114.7 against 114.3 in July; the high point of the year was reached in February, but fluctuations since the first of the year have resulted in a relatively moderate change. Trading on the stock exchanges was at a slightly higher level in August than in July. Financial transfers in the form of bank debits showed a decline of 3 p.c. from the preceding month after seasonal adjustment. The gain over the same month of last year was nearly 5 p.c., while the cumulative total for the first eight months was 12.3 p.c. greater than in the same period of last year.

Business Operations

Further expansion in productive operations was shown in August when the index of the physical volume of business advanced from 110 to 113.2. Zinc exports amounted to 49,818,000 lbs. against 23,404,000 in July. The total was greater than in any other month in the post-war period. Imports of bauxite for the manufacture of aluminium amounted to 62,717,000 pounds. The total was greater than in any other month in the last 17 years. The gain over the preceding month was more than 33 p.c. An increase was shown in the exports of copper which increased from 32,498,000 pounds to 39,309,000, the gain being more than 18 p.c. The decline in nickel exports was greater than normal for the season, the adjusted index showing a decline of about 6 p.c. The shipment of gold from Canadian mines to the Mint and to external points at 317,931 fine ounces was greater than in any other month in the post-war period except in March, 1934. After adjustment for seasonal tendencies a new high point for the last 17 years was established in August, with one exception. A considerable gain was shown in silver shipments when the index advanced from 76.2 to 100.2. Asbestos exports declined from the exceptionally high point of the preceding month. The total of better grades of asbestos exported amounted to 10,075 tons against 13,851 in July.

According to data received relating to the operations of manufacturing plants, considerable acceleration was shown in August over the preceding month. The foodstuffs' index advanced from 102.4 to 110.1. The milling industry was more active in the last month for which statistics are available, the flour index increasing from 85.8 to 104.7. But a recession in the manufacture of sugar was equivalent to the seasonal tendency. The meat-packing industry showed recession from the high level of July. The index of inspected slaughterings declined from 149.8 to 144.3. The increase in the inspected slaughterings of cattle and sheep was less than normal for the season. The recession in hog slaughterings was of moderate proportions. The index of cheese exports declined from 49.7 to 46.6. The exports of canned salmon were greater than in any August since 1928. The total movement was 5,745,000 pounds against 2,040,000 in July. A marked gain was consequently shown after seasonal adjustment.

The rubber industry continued active. According to the latest available data the imports of crude rubber were 8,467,000 pounds in August against 5,095,000 in July. The inward movement was greater than in any other August in the post-war period. The index of the manufacture of tires moved up from 78.9 to 83.6 in the latest month for which statistics are available. A moderate decline was shown in the manufacture of boots and shoes, the index declining from

The chart showing three representative factors traces for the last seven years after adjustment for long-term trend, three movements whose interrelations are regarded as of special importance, namely, the movement of inverted bond yields representative of credit, the movement of common stock prices representative of speculation and the index of the physical volume of business representative of productive activity in a broad sense. Though these movements must always be interpreted in the light of current influences, they tend to move in the order named.

102.1 to 98.3. Imports of wool for further manufacture showed a drastic decline in August. The imports of raw cotton and cotton yarn, on the other hand, recorded advances. Raw cotton imports amounted to 7,097,000 pounds against 5,818,000 pounds in July. The index moved up from 67.6 to 86.8. Cotton yarn and thread were also imported in considerably greater volume, amounting to 36,332,000 pounds against 32,368,000 in July. The index of the imports of raw textiles for further manufacture receded from 88.5 in July to 87.6.

Gains in the factors representative of the lumber industry counterbalanced the recession in pulp and paper. The net result was that the forestry index was slightly more than maintained at the high level of the preceding month. The export of planks and boards was 168,440,000 feet against 153,897,000 feet in July. The gain in the index amounted to nearly 10 p.c. The outward movement was greater than in any other August since 1929. A gain was also shown in the export of shingles which amounted to 234,537 squares. The adjusted index advanced from 92.7 to 95.6. The production of newsprint was 270,053 tons against 274,627 in July. The output was greater than in any other August in history. The gain in the export of woodpulp was less than normal for the season, the index receding from 85.4 to 78.6. The outward movement was greater than in any other August since 1929. The production of steel ingots which has been showing a decline for three months recorded a considerable increase in August. The output was 80,164 tons compared with 68,973 in July. The adjusted index advanced from 114.1 to 129.7, a gain of nearly 14 p.c. A slight increase was shown in pig iron production, the output being 38,570 tons compared with 34,988.

Automobile production was inactive during August, the output being limited to 4,660 units compared with 10,475 in July. Operations were suspended in some plants pending the early introduction of new models. A marked gain was shown in the imports of crude petroleum, reflecting conditions in the oil industry. The imports were 146,314,000 gallons against 121,336,000 in July. The adjusted index advanced from 224.7 to 281.5, a gain of more than 25 p.c. The seasonally adjusted index was higher in August than in any other month in the post-war period except November, 1929 and 1934. The advancing trend in the new business obtained by the construction industry was reversed in August. Advances had been shown from April to July in the contracts awarded and in building permits. The index of contracts awarded dropped from 62.7 in July to 51.1 in August and the building permits' index, also adjusted for the cost of construction, dropped from 35.3 to 32.2. Carloadings showed an increase for the third consecutive month, and were greater than in any August since 1930. The index was 81.2 against 78.0 in July, the gain having been 4 p.c. The substantial gain in the export trade was an important factor in the economic betterment of the month. The total amounted to \$93,500,000 against nearly \$85,000,000 in July. The index advanced from 111.1 to 122.9 after being adjusted for seasonal tendencies. Imports, contrary to seasonal tendency, showed a decline in August; the total was \$50,248,000 against \$53,821,000 in July, the index receding from 85.2 to 76.7.

Agricultural Conditions

Weather conditions in the Prairie Provinces during most of September greatly facilitated the threshing of the 1936 grain crops. The end of the month saw harvesting nearly completed, except in the Peace River country where heavy snow in mid-September suspended operations. Total wheat production in 1936, according to the first official estimate, was nearly 233 million bushels, or approximately 44 million bushels less than in 1935, but the 1936 crop is grading much higher than the crop of last year. The production and quality of coarse grains in 1936 are appreciably below those of last year. The coarse grain crops were particularly poor in the Prairie Provinces, but the Maritime Provinces and Quebec have had a larger harvest of these crops. Total hay production is slightly less, the drought reducing the yield in Ontario and the Prairie Provinces; although the Maritime Provinces and Quebec have larger crops.

Prices of wheat and coarse grains moved to higher levels during the first three weeks of September. The export movement of wheat from Canada continued in good volume.

Cattle marketings in the early part of September were less than those of September 1935, with prices appreciably lower. Hog marketings were greater but prices were also slightly lower. Sheep marketings were considerably below those of a year ago. Prices of lambs were higher.

Creamery butter production in August recorded a decline of 4 p.c. compared with August 1935, but the total for the first eight months of this year is 3 p.c. greater than the corresponding period of 1935. Factory cheese production continued to increase, the first eight months of 1936 showing an output 15 p.c. above the corresponding period of last year.

The production of all fruit crops in 1936 will be less than in 1935. The Ontario grape crop is the smallest for some years. Early varieties of apples have been marketed at satisfactory prices and the harvesting of the main apple crop is now in progress.

Pasture conditions in Ontario, Manitoba, British Columbia and Quebec were improved by rains during the month. The chief concern now is to ensure a supply of winter feed for live stock in the areas affected by extreme drought.

Commodity Prices

The advance in wholesale prices continued in August for the third consecutive month. The striking advances in July and August were mainly due to crop curtailment caused by adverse weather conditions. The general index advanced from 74·4 in July to 76·2 in August. One of the noteworthy features of the midsummer advance was the improvement in farm product price levels relative to the general level of wholesale prices. The index of Canadian farm products was 73·3 in August against the general index number of 76·2.

Wheat prices reached a peak on August 5 and thereafter moved irregularly downward for the remainder of the month. While the marked advance from May was overdone for the time, new peaks for the year were recently reached at Winnipeg. Australian prices were firm owing to the reduced quantity of old crop available. Declining wheat prices brought reaction in flour quotations and hesitant attitude on the part of domestic buyers. A sharp rise took place in cocoa prices on a better demand from continental Europe and the United States.

Values of lead were firmer, the upward movement receiving some stimulus from the cutting of supplies from Spain which normally amounted to about 5,000 tons per month. Consumption in Great Britain was satisfactory in all centres and offerings, which at times were fairly substantial, met a speedy clearance. Active conditions were witnessed in copper markets both in Europe and the United States but following the breakdown in the negotiation to raise the domestic price of electrolytic in the latter country to 10 cents per pound, buying interest became much quieter. The reported breakdown in the negotiations for the revival of the zinc cartel caused a sharp fall in the values of spleter in the British market, though the volume of selling was not unwieldy. A slight gain was shown in the domestic price of zinc.

Increases in food prices were responsible for the gain in the cost of living index. The latter moved up from 80·5 in July to 81·2 in August which was 2·3 p.c. above the level of a year ago. The gain in the food index over July was slightly more than two points at 74·7. No changes of any consequence were recorded for other budgeting groups.

Employment

The short-term gain in general employment at the first of August was of a very moderate character. A considerable lead has been consistently shown since the first of the year over the levels of the same period of 1935. The advance on August 1 over the same date of last year was 4·5 p.c. The index after seasonal adjustment was 101·1, the average for 1926 being regarded as equal to 100.

Seven of the eight main groups showed increases in the twelve months, construction and maintenance being the exception. The substantial lead of 5 p.c. in manufacturing employment over the same date of last year was significant as the number is unaffected to any important extent by unemployment relief. The seasonally adjusted index was practically maintained during the month.

The mining index showed a gain of 10 p.c. over August 1, 1935. The increase in coal mining was moderate while marked gains were shown in other classes. The increase in logging was 7·6 p.c., while saw-milling employment increased 6·6 p.c. and working forces in pulp and paper plants were 9 p.c. greater. Railway construction and maintenance absorbed a greater number of workers, largely offsetting the recessions in other lines of construction.

The index for trade moved up from 120·7 one year ago to 126·3, a gain of 4·6 p.c.

Finance

The decline in notice deposits following the temporary high point reached at the end of April was continued in July, the drop in the last three months having been \$42,000,000. The lead over the same date of 1935 was still substantial at \$66,000,000. Demand deposits also showed recession at the end of July, but, after seasonal adjustment, the advance was continued to a new high point for recent years.

The decline in current loans during the month was limited to about \$8,000,000 but resulted in a new low point since 1910. The gain in internal call loans contrasted with a decline in external loans.

The sum of the notice and demand deposits was \$2,113,000,000, while the sum of internal current and call loans and call loans elsewhere amounted to nearly \$800,000,000. Security holdings which showed only a slight recession from the preceding month amounted to \$1,357,000,000. Current loans were only 43·5 p.c. of notice deposits at the end of July.

Outstanding Bank of Canada notes amounted to more than \$100,000,000 of which \$36,000,000 was held by the chartered banks. Chartered bank notes in the hands of the public were \$113,400,000 making a total of \$177,400,000 in public circulation. This amount was larger than at any time since November 1929.

During August the assets of the Bank of Canada declined \$11,810,000 largely due to a decline in the reserve in United States funds. The drop in the latter was from \$12,854,000 to \$2,128,000. Deposits by the Dominion Government showed a decline of \$13,668,000, the amount dropping from \$19,316,000 to \$5,648,000. The deposits of the chartered banks were \$5,143,000 lower at \$180,741,000. The investment in short-term Dominion Government securities showed further

increase to \$31,108,000. The ratio of net reserves to notes and deposits stood at 62.53 p.c. at the end of August, compared with 63.66 p.c. on July 31. Subscriptions to the new Government loan for \$100,000,000 were opened on September 10, the 3 p.c. perpetual issue having been an innovation in Dominion financing. The offering was at the discount price of 96.50, yielding 3.11 p.c. In addition to the perpetual bonds the government offered 4½ year 1 p.c. notes due March 15, 1941, at 98.25, to yield 1.40 p.c. The books were closed after 2½ hours, allotments having been made of \$55,000,000 of the 3 p.c. perpetual bonds and \$45,000,000 of the 1 per cent 4½ year notes.

Toronto stock exchange member net borrowings on collateral as of August 31 were \$32,960,000, an increase of \$797,000 over the preceding month.

At the same time quoted values of all listed stocks increased \$48,633,000 at \$5,119,409,000, making the rates of borrowing to market values .64 of one per cent against .63 of one per cent at the end of July. The figures of collateral borrowings do not include loans on foreign securities nor the borrowings of bond affiliate companies of the Toronto stock exchange.

The underwritings and flotation of bonds and notes in the first eight months of the present year amounted to \$821,421,000 compared with \$456,940,000 in the same period of 1935. Short-term financing played a greater part in the elapsed portion of the present year.

Security Prices

The gain in the index of common stock prices over July was fractional. Minor recovery has been shown since May but the gain over January was less than two points in the index. Each of the industrial groups except oils and papers recorded increases in August. The index of 19 power and traction stocks was 67.1 compared with 66.9 in July. The bank stock index averaged nearly 2½ p.c. higher. The index of 23 preferred stocks was more than a point higher at 80.6. The same index was 70.9 in August of last year.

The gain in the index of 23 mining stocks was due to further strength in base metals. The index of 20 gold stocks receded from 134.4 in July to 132.6 in the month under review.

The bond market continued strong with Dominion of Canada long-term issues at new high levels. The index of Dominion of Canada long-term bond yields fell from 65.1 to 63.2. The average yield of the six issues used in this index was 2.97 for the last day of August as compared with 3.02 for the last day of July.

Four Charts

The charts appearing in this number portray economic changes in Canada and in other countries during recent years. The chart on page 4 shows three significant factors with full analysis from the beginning of 1929 to the present time. Money, speculation and business are represented by inverted bond yields, common stock prices and the index of the physical volume of business, respectively. They tend to move in the order named establishing a sequence which is valuable in economic interpretation. The advance in inverted bond yields was a characteristic movement of the last three years. A new high point was reached in August and the early weeks of September. The fluctuation in common stock prices has not resulted in an important change from the first of the year. The physical volume of business declined during the first quarter but has since advanced to a new high point.

An index of the physical volume of business is shown by months from January 1919 to the present in the chart on page 10. The line of long-term trend compiled by the method of least squares is superimposed, depicting the alternation of prosperity and depression. The index has fluctuated above the line for the most of the time in the last twelve months.

The fluctuation in world stocks and prices of nine commodities since 1920 is shown on page 15. A disparity was recorded between the two indexes from 1925 to the present. Stocks accumulated between 1925 and 1932 and have since shown decline especially since 1934. Prices have increased since 1932 following the decline of the preceding seven years. An inverse correlation was shown after 1925, the piling-up of commodity stocks was a feature during the prosperity phase of the cycle ending in 1929, but the gain in the next three years was even more spectacular. The movements of the last three years need to be carried much further before the relationship existing between 1920 and 1925 is restored. Stocks of cotton and coffee showed gains in the early months of 1936 while tin, copper and wheat have shown drastic decline in recent years.

The chart on page 30 shows the relative industrial position of Canada and the United States. On the basis of 1926 industrial production in Canada has been, since the summer of 1933, at a relatively higher level than in the United States. In the last three years the upward trend in Canada has been well supported while in the United States marked fluctuation has occurred. The gain in the United States during the last twelve months, however, has been of greater proportions than in Canada. The Canadian indexes shown, except of automobile production, occupied in July a higher position than the corresponding indexes of the other country.

MONTHLY REVIEW OF BUSINESS STATISTICS

Table 1. Weighted Indexes of the Physical Volume of Business and Agricultural Factors in Canada, Based on the Monthly Average for 1926 and Corrected where Necessary for Seasonal Variation. See supplements for description and post-war data.

Classification	1935					1936							
	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	Mar.	April	May	June	July	Aug.

REVUE MENSUELLE DE LA SITUATION ÉCONOMIQUE

Vol. XI

OTTAWA, SEPTEMBRE, 1936

N° 9

STATISTICIEN DU DOMINION: R. H. COATS, LL.D., F.R.S.C., F.S.S. (HON.)
STATISTIQUES ÉCONOMIQUES: SYDNEY B. SMITH, M.A.

STATISTIQUE COURANTE DE LA SITUATION ÉCONOMIQUE AU CANADA

La situation montre une plus ample amélioration en août, la plupart des facteurs économiques majeurs montrant des avances substantielles sur le mois précédent. L'indice des opérations commerciales a atteint une nouvelle cime depuis mai 1930, plusieurs facteurs dépassant les niveaux de la période de prospérité du dernier cycle, culminant en 1929. Le volume des exportations est un point brillant du mois, le gain ajusté sur le mois précédent dépassant 10 p.c. Pour le troisième mois consécutif les prix de gros ont avancé vivement en août, rompant ainsi leur immobilité datant du commencement de 1934. La hausse est attribuable en plus grande partie à la réduction des récoltes par la mauvaise température. L'avance marquée du cours des obligations de tout repos s'est continuée en août, prolongeant ainsi le mouvement de hausse en évidence depuis près d'un an; le rendement des obligations est maintenant plus bas qu'à toute autre époque de la période d'observation soit depuis 1919 jusqu'à nos jours. Les obligations de l'Ontario ont touché en août leur maximum depuis les débuts du siècle actuel. Le déclin des dépôts bancaires a été moins que normal pour la saison, l'indice ajusté s'étant un peu plus que maintenu à la fin d'août. Le gain du cours des actions ordinaires a été de proportion modérée, l'indice marquant 114·7 comparativement à 114·3 en juillet; la cime de l'année a été touchée en février mais les fluctuations depuis le commencement de l'année ont été de proportions plutôt modestes. Le volume d'affaires transigées à la bourse a été un peu plus considérable en août qu'en juillet. Les transferts financiers sous la forme de dépôts bancaires montrent un déclin de 3 p.c. comparativement au mois précédent, après ajustement saisonnier. Le gain sur le même mois de l'an dernier est d'environ 5 p.c. et le total cumulatif des huit premiers mois de 1936 est de 12·3 p.c. de plus que celui de l'an dernier.

Opérations commerciales

Une plus ample expansion des opérations productives en août est indiquée par l'indice du volume physique des affaires qui a avancé de 110 à 113·2. Les exportations de zinc se chiffrent à 49,818,000 livres comparativement à 23,404,000 en juillet. Le total dépasse celui de tout mois de l'après-guerre. Les importations de bauxite pour la fabrication d'aluminium donnent 62,717,000 livres. Ce total dépasse celui de tout autre mois des derniers dix-sept ans. Le gain sur le mois précédent dépasse 33 p.c. Il y a augmentation dans les exportations du cuivre qui ont avancé de 32,498,000 livres à 39,309,000, un gain dépassant 18 p.c. Le déclin des exportations de nickel a été plus que normal pour la saison, l'indice ajusté montrant un recul d'environ 6 p.c. Les expéditions d'or des mines canadiennes à la Monnaie et à l'extérieur, à 317,931 onces fines, sont plus considérables qu'en tout mois de la période d'après-guerre, excepté mars 1934. Après ajustement pour tendances saisonnières, c'est une nouvelle cime des derniers dix-sept ans sauf une exception. Il y a augmentation considérable des expéditions d'argent, ce qui a avancé l'indice de 76·2 à 100·2. Les exportations d'amiante ont décliné de leur niveau excessivement élevé du mois précédent. Le total des meilleures qualités d'amiante exportées donne 10,075 tonnes comparativement à 13,851 en juillet.

D'après les données connues sur les opérations manufacturières, août montre une amélioration considérable sur le mois précédent. L'indice des produits alimentaires a avancé de 102·4 à 110·1. La minoterie a été plus active le dernier mois sur lequel des statistiques sont établies, l'indice de la farine montant de 85·8 à 104·7. Mais le recul de la production de sucre est normal pour la saison. Les abattoirs et salaisons montrent un fléchissement de leur haut niveau de juillet. L'indice des abatages inspectés a décliné de 149·8 à 144·3. L'augmentation des abatages de bêtes à cornes et de moutons a été moins que normale pour la saison. Le recul des abatages de porcs a été de proportion modérée. L'indice des exportations de fromage a décliné de 49·7 à 46·6. Les exportations de saumon en boîte ont dépassé celles de tout mois d'août depuis 1928. Le total donne 5,745,000 livres comparativement à 2,040,000 en juillet. Il y a en conséquence un gain marqué après ajustement saisonnier.

L'industrie du caoutchouc est restée active. D'après les dernières données, les importations de caoutchouc brut donnent 8,467,000 livres en août comparativement à 5,095,000 en juillet. C'est plus qu'en tout autre mois d'août de l'après-guerre. L'indice de la fabrication de bandages a monté de 78·9 à 83·6 le dernier mois sur lequel les statistiques sont établies. Il y a un déclin modéré dans la production de chaussures, l'indice reculant de 102·1 à 98·3. Les importations de laine pour plus ample transformation accusent un déclin drastique en août. Les importations de coton brut et de filés de coton ont avancé. Les importations de coton brut donnent

7,097,000 livres comparativement à 5,818,000 en juillet. L'indice a monté de 67·6 à 86·8. Les importations de fils et fils de coton ont aussi un plus fort volume, soit 36,332,000 livres comparativement à 32,368,000 en juillet. L'indice des importations de textiles bruts pour plus ample transformation a reculé de 88·5 en juillet à 87·6.

Des gains dans l'industrie du bois ont contrebalancé les pertes de la pulpe de bois et le papier. Comme résultat net l'indice des industries forestières s'est un peu mieux que maintenu au haut niveau du mois précédent. Les exportations de madriers et planches donnent 168,440,000 pieds comparativement à 153,897,000 en juillet. Le gain de l'indice atteint presque 10 p.c. L'exportation dépasse celle de tout mois d'août depuis 1939. Il y a aussi un gain dans les exportations de bardeaux qui donnent 234,537 carres. L'indice ajusté a avancé de 92·7 à 95·6. La production de papier à journal est à 270,053 tonnes comparativement à 274,627 en juillet. C'est mieux qu'en tout autre mois d'août dans les annales. Le gain des exportations de pulpe de bois a été moins que normal pour la saison, l'indice fléchissant de 85·4 à 78·6. C'est tout de même mieux qu'en tout autre mois d'août depuis 1929. La production d'acier en lingots, qui fléchissait depuis trois mois, donne une augmentation considérable en août: 80,164 tonnes comparativement à 68,793 en juillet. L'indice ajusté a avancé de 114·1 à 129·7, un gain de près de 14 p.c. Il y a une légère augmentation dans la production de fonte en gueuse, 38,570 tonnes comparativement à 34,988.

L'industrie de l'automobile a été peu active en août, la production se limitant à 4,660 unités comparativement à 10,475 en juillet. Dans plusieurs établissements les opérations ont été suspendues en attendant la production prochaine de nouveaux modèles. Il y a un gain marqué dans les importations de pétrole brut, reflétant les conditions dans l'industrie des huiles. Les importations donnent 146,315,000 gallons comparativement à 121,336,000 en juillet. L'indice ajusté a avancé de 224·7 à 281·5, un gain de plus de 25 p.c. L'indice ajusté est plus haut en août qu'en tout autre mois de la période d'après guerre, excepté novembre 1929 et 1934. Le mouvement d'accélération dans l'industrie du bâtiment a été renversé en août. Il y a eu avance d'avril à juillet dans la valeur des contrats et des permis à bâtir. L'indice des contrats a tombé de 62·7 à 51·1 en août et celui des permis de bâtir après ajustement pour le coût de la construction de 35·3 à 32·2. Les chargements de wagons montrent une amélioration pour le troisième mois consécutif et sont plus considérables qu'en tout autre mois d'août depuis 1930. L'indice marque 81·2 comparativement à 78·0 en juillet, le gain étant de 4 p.c. Le gain substantiel des exportations a été un important facteur dans l'amélioration économique du mois. Le total donne \$93,500,000 comparativement à près de \$85,000,000 en juillet. L'indice a avancé de 111·5 à 122·9, après ajustement pour tendance saisonnière. Les importations, contrairement à la tendance saisonnière, montrent un déclin en août. Le total est de \$50,248,000 comparativement à \$53,821,000 en juillet, l'indice reculant de 85·2 à 76·7.

La situation agricole

La température des Provinces des Prairies, la plus grande partie de septembre, a grandement facilité le battage des céréales de 1936. Les récoltes à la fin d'août étaient terminées presque partout, excepté dans la région de la Rivière La Paix où la lourde neige de la mi-septembre avait suspendu les opérations. La production totale de blé en 1936, d'après la première estimation officielle, est dans le voisinage de 233 millions de boisseaux, ou approximativement 44 millions de boisseaux inférieure à celle de 1935, mais celle de 1936 est de beaucoup meilleure qualité. La production et la qualité des autres grains, en 1936, sont appréciablement inférieures à celles de l'an dernier. Les grains fourragers sont particulièrement médiocres dans les Provinces des Prairies, mais dans les Provinces Maritimes et le Québec ces récoltes sont beaucoup meilleures. La production totale de foin est légèrement inférieure, la sécheresse ayant réduit le rendement dans l'Ontario et les Provinces des Prairies; tout de même les Maritimes et le Québec ont donné de plus fortes récoltes.

Les prix du blé et des petits grains ont monté à de plus hauts niveaux les trois premières semaines de septembre. Le mouvement d'exportation du blé canadien se continue en bon volume.

Les arrivages de bestiaux de la première partie de septembre ont été inférieurs à ceux de septembre 1935, et les prix considérablement plus bas. Les arrivages de porcs ont été plus considérables, mais les prix plus bas. Les arrivages de moutons ont été de beaucoup inférieurs à ceux de l'an dernier. L'agneau, cependant, commande des prix plus forts.

La production de beurre de crème en août donne un déclin de 4 p.c. sur le même mois de l'an dernier, mais le total des huit premiers mois de l'année est de 3 p.c. plus élevé. La production de beurre de fabrique continue d'augmenter les premiers huit mois de 1936, avec une production de 15 p.c. plus élevée que celle de la période correspondante de l'année dernière.

La récolte fruitière sera inférieure à celle de 1935. La récolte de raisin de l'Ontario est la plus faible depuis quelques années. Les variétés hâties de pommes sont maintenant absorbées et la récolte des autres variétés est maintenant commencée.

L'état des pâturages en Ontario, Manitoba, Colombie Britannique et Québec s'est amélioré par les pluies du mois. La principale question actuellement est l'approvisionnement de fourrage dans les régions affectées par la sécheresse extrême.

Cours des denrées

Pour le troisième mois consécutif les prix de gros ont continué leur avance en août. Les vives avances de juillet et d'août sont attribuables en plus grande partie à la réduction des ré-

coltes causée par la mauvaise température. L'indice général a avancé de 74·4 à 76·2 en août. Un des traits caractéristiques de cette avance de mi-été est l'affermissement des produits de la ferme et leur position relativement aux niveaux des prix de gros. L'indice des produits de la ferme est à 73·3 en août alors que l'indice général est à 76·2.

Le cours du blé a atteint une cime le 5 août, et, depuis cette date, a fluctué irrégulièrement plutôt vers la baisse jusqu'à la fin du mois. Bien que l'avance marquée depuis mai fût exagérée pour le temps, de nouvelles cimes de l'année ont été récemment touchées à Winnipeg. Les prix australiens sont fermes vu la réduction du report. Le fléchissement du blé a provoqué la réaction de la farine et une attitude hésitante de la part des acheteurs domestiques. Une vive hausse a pris place dans le cacao à la suite d'une meilleure demande de l'Europe continentale et des États-Unis.

Le plomb a été plus ferme, le mouvement de hausse étant stimulé par le manque de ravitailllements d'Espagne qui fournit normalement environ 5,000 tonnes par mois. La consommation en Grande-Bretagne a été satisfaisante dans tous les centres, et les arrivages qui ont été parfois assez substantiels ont été rapidement absorbés. Le marché du cuivre a été actif tant en Europe qu'aux États-Unis, mais après la rupture des négociations pour élever le prix domestique de l'électrolytique à 10c. la livre aux États-Unis, l'intérêt des acheteurs a été beaucoup moins prononcé. La rupture des négociations pour le renouvellement du cartel du zinc a causé une violente baisse dans le cours du zinc commercial sur le marché britannique bien que le volume des ventes n'ait pas été anormal. Il y a un gain léger dans le prix domestique du zinc.

La hausse des denrées alimentaires est responsable de l'avance de l'indice du coût de la vie. Ce dernier a monté de 80·5 en juillet à 81·2 en août, soit 2·3 p.c. au-dessus de son niveau de l'an dernier. Le gain dans l'indice des denrées alimentaires sur juillet dépasse légèrement deux points à 74·7. Il n'y a pas de changement important dans les autres groupes du budget familial.

Emploiement

L'augmentation de l'emploiement le 1er août est d'un caractère très modéré. Après ajustement saisonnier, il y a de légers gains en juin et juillet renversant la tendance des premiers mois de l'année. Comparativement à la même période de l'an dernier, il y a un gain considérable depuis le commencement de l'année. L'avance sur le 1er août 1935 est de 4·5 p.c. L'indice, après ajustement saisonnier, marque 101·1, la moyenne de 1926 étant prise pour 100.

Sept des huit groupes principaux montrent une augmentation dans la comparaison de 1935, la construction et l'entretien étant l'exception. L'avance substantielle de 5 p.c. dans l'emploiement des manufactures au cours de l'année est significative parce que les manufactures ne sont pas affectées sensiblement par les travaux de secours. L'indice ajusté s'est pratiquement maintenu au cours du mois.

L'indice des mines montre un gain de 10 p.c. sur le 1er août 1935. L'augmentation dans les mines de charbon a été modérée, mais elle est très sensible dans les autres classes. Dans l'abatage du bois elle est de 7·6 p.c.; dans le sciage, 6·6 p.c.; la papeterie et pulperie, 9 p.c.. Les travaux de construction et d'entretien de chemin de fer ont absorbé un plus grand nombre de travailleurs, renversant en grande partie les reculs dans les autres compartiments de la construction.

L'indice du commerce a monté de 120·7, il y a un an, à 126·3, un gain de 4·6 p.c.

Finance

Le déclin des dépôts à terme, venant après la cime temporaire de la fin d'avril, s'est maintenu en juillet, la baisse des trois derniers mois étant de \$42,000,000. L'avance sur la même date de 1935 est encore substantielle, à \$66,000,000. Les dépôts à demande montrent aussi des reculs à la fin de juillet, mais, après ajustement, l'avance s'est continuée à une nouvelle cime de ces dernières années.

Le déclin des prêts courants au cours du mois s'est limité à \$8,000,000, mais il donne un nouveau bas depuis 1910. Le gain dans les prêts à demande au pays est en contraste avec le déclin des prêts à l'extérieur.

La somme des dépôts à terme et à demande est de \$2,113,000,000 et la somme des prêts courants, à demande et à l'extérieur atteint près de \$800,000,000. Le portefeuille qui montre seulement un léger recul comparativement au mois précédent comprend \$1,357,000,000. Les prêts courants ne donnent que 43·5 p.c. des dépôts à demande à la fin de juillet.

Les billets de la Banque du Canada en circulation dépassent \$100,000,000 dont \$36,000,000 détenus par les banques à charte. Les billets des banques à charte aux mains du public donnent \$113,400,000, ce qui fait un total de \$177,400,000 de billets en circulation. Ce montant est plus considérable qu'à toute date depuis novembre 1929.

Le cours du mois d'août, l'actif de la Banque du Canada a décliné de \$11,810,000 dû en plus grande partie à une baisse des réserves en fonds des États-Unis, soit de \$12,854,000 à \$2,128,000. Les dépôts du gouvernement fédéral montrent une diminution de \$13,668,000, leur montant tombant de \$19,316,000 à \$5,648,000. Les dépôts des banques à charte, à \$180,741,000, ont diminué de \$5,143,000. Les effets à brève échéance du gouvernement fédéral ont augmenté à \$31,108,000. La proportion des réserves nettes en opposition aux billets et dépôts est de 62·53 p.c. à la fin d'août comparativement à 63·66 le 31 juillet. Les souscriptions au nouvel emprunt de \$100,000,000 du gouvernement ont été ouvertes le 10 septembre et l'émission perpétuelle de

3 p.c. a été une innovation dans le financement fédéral. L'offre était au prix de 96.50 devant rapporter 3.11 p.c. En plus de ces obligations perpétuelles, le gouvernement offrait aussi des bons à 4½ ans, 1 p.c. échéant le 15 mars 1941, au prix de 98.25, donnant un rendement approximatif de 1.40 p.c. Les bordereaux de souscription, ont été remplis au bout de 2½ heures, les cent millions étant répartis comme suit: \$55,000,000 en obligations perpétuelles à 3 p.c. et \$45,000,000 en bons à 1 p.c. pour 4½ ans.

Les emprunts des membres de la bourse de Toronto sur les valeurs collatérales le 31 août se chiffraient à \$32,960,000, une augmentation de \$797,000 sur le mois précédent.

A la même date, les valeurs cotées de tous les titres inscrits avaient augmenté de \$48,633,000 pour atteindre \$5,119,409,000, ce qui portait la proportion des prêts à 0.64 d'un pour cent comparativement à 0.63 d'un pour le mois précédent. Les chiffres des emprunts collatéraux ne comprennent pas les prêts sur les titres étrangers ni les emprunts de compagnies fiduciaires affiliées à la bourse de Toronto.

Les émissions des premiers huit mois de l'année courante donnent \$821,421,000 comparativement à \$456,940,000 la même période de 1935. Le financement à brève échéance a joué un plus grand rôle au cours de la partie écoulée de l'année courante.

Valeurs mobilières

Le gain de l'indice des actions ordinaires sur juillet est fractionnel. Il y a un faible mouvement de relèvement depuis mai mais l'avance de l'indice depuis janvier est inférieure à deux points. Chacun des groupes industriels, excepté les huiles et les papiers, a avancé en août. L'indice de 19 titres d'énergie et traction est à 67.1 comparativement à 66.9 en juillet. L'indice des actions de banque est en moyenne de 2½ p.c. plus élevé. L'indice de 23 titres d'action privilégiée a avancé de plus d'un point à 80.6. Le même indice était à 70.9 en août de l'an dernier.

Le gain de l'indice de 23 titres miniers est dû à la force des métaux communs. L'indice de 20 titres de mine d'or a reculé de 134.4 en juillet à 132.6 le mois sous revue.

Le marché des obligations est resté fort, les émissions à long terme du gouvernement fédéral atteignant de nouvelles cimes. L'indice du rendement des obligations à long terme du gouvernement fédéral a tombé de 65.1 à 63.2. Le rendement moyen des six émissions entrant dans cet indice était de 2.97 le dernier jour d'août comparativement à 3.02 le dernier jour de juillet.

Quatre graphiques

Les graphiques de la présente livraison illustrent les changements économiques au Canada et en d'autres pays ces dernières années. Le graphique de la page 4 montre trois facteurs significatifs avec analyse complète depuis le commencement de 1929 jusqu'à nos jours. L'argent, la spéculation et le commerce sont représentés par le rendement inversé des obligations, les actions ordinaires et l'indice du volume physique des affaires respectivement. Ils tendent à se déplacer dans l'ordre de leur mention, établissant une séquence qui a une grande valeur dans l'interprétation économique. L'avance du rendement inversé des obligations est un mouvement caractéristique des trois années dernières. Une nouvelle cime a été atteinte en août et la première semaine de septembre. La fluctuation du cours des actions ordinaires ne montre aucun changement important depuis le commencement de l'année. Le volume physique des affaires a décliné durant le premier trimestre mais depuis il est remonté à de nouvelles hauteurs.

Un indice du volume physique des affaires est montré depuis janvier, 1919, par mois jusqu'à date dans le graphique de la page 10. La ligne de marche à long terme compilée par la méthode du moindre carré se superpose pour indiquer les alternances de prospérité et de dépression. L'indice a fluctué au-dessus de la ligne la plus grande partie des douze mois derniers. La fluctuation des stocks et des prix mondiaux de neuf denrées depuis 1920 est illustrée à la page 15. Il y a disparité entre ces deux indices depuis 1925 jusqu'à date. Les stocks se sont accumulés entre 1925 et 1932 et ils déclinent depuis cette date et spécialement depuis 1934. Les prix ont avancé depuis 1932 suivant le déclin des sept années précédentes. Il y a une corrélation inverse après 1925, l'accumulation des stocks de denrées étant une corrélation de la phase de prospérité du cycle terminé en 1929 mais le gain des trois années suivantes est encore plus spectaculaire. Les mouvements des trois dernières années doivent être portés beaucoup plus loin avant que se rétablisse leur corrélation telle qu'elle était entre 1920 et 1925. Les stocks de coton et de café montrent des gains les premiers mois de 1936 et l'étain, le cuivre et le blé montrent des déclins drastiques en ces dernières années.

Le graphique de la page 30 montre la position industrielle relative du Canada et des Etats-Unis. Sur une base de 1926 la production canadienne industrielle a été depuis l'été de 1933 à un niveau relativement plus élevé qu'aux Etats-Unis. Les trois dernières années la hausse au Canada s'est bien maintenue tandis qu'aux Etats-Unis elle a grandement fluctué; toutefois, les gains aux Etats-Unis les douze mois derniers ont été de proportions beaucoup plus grandes qu'au Canada. Les indices canadiens paraissent, excepté la production d'automobiles, occupent en juillet une position plus élevée que les indices correspondants de l'autre pays.

PUBLICATIONS ISSUED BY THE DOMINION BUREAU OF STATISTICS

1. ANNUAL OR SPECIAL REPORTS ISSUED DURING THE MONTH ENDED SEPTEMBER 16, 1936

Population.—Census of Manitoba, Saskatchewan and Alberta, 1936: instructions to commissioners and enumerators, census 1936. 8+175 p. (Eng. and French).
