Farmers' Income from Farming Operations

In the field of agricultural statistics the Dominion Bureau of Statistics produces two very interesting and valuable estimates of farmers' income from farming operations. These are (a) Cash Income from the Sale of Farm Products and (b) Net Income of Farm Operators from Farming Operations. The first of these is published on a quarterly basis and the second on an annual one.

In any consideration of these estimates it is of vital importance that full regard be paid to the qualifying notation that it is only income from farming operations that is being discussed. These estimates do not include any income farm operators may derive from investments, mortgages, rents, etc., or from labour at non-farm occupations such as logging in the winter time, provincial roadwork or (as is frequently the case of farmers on the prairies who have no live stock and spend the winters in urban communities) industrial employment.

Thus neither of the estimates to be discussed below pretends to present a picture of the entire income of the farming community in Canada and neither of them should be used as illustrations of the percentage of the gross national income which is enjoyed by the Canadian farmers. They are, however, invaluable guides to the year by year fluctuations in the prosperity of agricultural industry in Canada.

"Cash Income from the Sale of Farm Products" estimates on a quarterly basis the actual cash received by the farmers from the sale of their products during the quarter. It is usually published within eight weeks of the close of the quarter and thus provides a very up-to-date estimate of the gross amount of cash flowing into the hands of the farmers. Due to very great seasonal fluctuations in the quantities of farm products delivered to market there is little, if any, comparability, quarter to quarter, and therefore the Bureau report presents, in the interests of comparison,

receipts for the similar quarters of the two previous years.

In order to present the estimate without undue delay it is necessary to determine prices received by farmers through a sampling technique not unlike that described in the October issue of the *Canadian Statistical Review*. Monthly questionnaires are mailed to a corps of about 4,000 voluntary farm price reporters, and a return of about 50 per cent is received. It is interesting to note that many of these price reporters have been thus co-operating with the Bureau of Statistics for about 20 years. In order to keep the monthly questionnaire as short and as simple as possible prices are asked only for 36 different farm products. Those remaining, which are of minor importance only, are priced by the Bureau's Agricultural Division through terminal market prices, with a deduction for handling and hauling charges.

Determination of quantities

The average of the prices determined through the methods described above are then applied to the known quantities of each product delivered by the farmers and the gross income from the sale of each product thus determined. Quantities are ascertained in several ways. For example: The statistical branch of the Board of Grain Commissioners provides very detailed information on farmers' marketings of the five principal grains (wheat, barley, rye, oats and flax) in each of the Prairie Provinces. It is obvious that with average prices received by farmers having been determined by sampling, and delivered quantities of these grains accurately known, there is no difficulty in determining the total amount of money paid to the farmers for these products.

The Marketing Service of the Department of Agriculture is another fruitful source of farm sales data, especially for numbers of live stock entering commercial channels. When its figures are combined with those obtained by

the Bureau, through its own semi-annual count of live stock on farms, a fairly complete count of the total live stock sold by farmers is obtained.

The Bureau obtains a good deal of the basic information for the farm income statistics from surveys conducted in various fields of agriculture. For instance fairly complete data are now available through monthly surveys of the quantity of milk and eggs produced and sold by farmers. Information pertaining to wool, maple products, honey, fruits and seeds is obtained in a similar manner.

For such a crop as sugar beets, information is obtained directly from the beet sugar manufacturers who are the sole purchasers and processors of the crop. Statistics for tobacco which is sold only to manufacturers or exporters are secured in the same way.

Other minor crops or products present greater difficulties but since data obtained in the censuses, which are taken every five year in the Prairie Provinces and every ten years elsewhere, are complete, these can be projected according to observable trends into the current quarter. Since such minor products account for only a small proportion of farm income from the sale of farm products any error in the manner of computation, while unfortunate, is not of sufficient consequence to affect seriously the estimate as a whole.

Net income figures

While cash income from the sale of farm products provides a criterion by which, in a general way, farmers' financial position may be measured, it does not take into consideration farmers' expenditures and for this reason, if not complemented by a statement of net income, might easily be misleading. Cash income does not truly indicate the amount of money available to meet farm family living expenses, income tax payments, recreational or saving funds or the amount of money available for investment in the farm itself either through additions to it, new buildings or new equipment, or for investment in other fields. For this information we must turn to the annual estimate of "Net Income of Farm Operators from Farming Operations". This is calculated by taking the cash income already discussed and adding to it income in kind, and the value, positive or negative, of changes in

the year-end inventory of farm-held live stock and grain, and subtracting from the total thus reached operating expenses and depreciation.

Income in kind includes all produce grown or raised on the farms and consumed in farm homes, plus an imputed value for house rent. Several methods are used in computing the cash value of income in kind. For most items the annual estimate of the value of home-consumed farm products is derived from the census reports on quantities of products so used, adjusted for value according to the prevailing average prices for the year under consideration. However some of the commodity sections of the Bureau's Agricultural Division provide complete annual estimates on both quantities and values of particular farm products which are consumed on the farms. For example the poultry and dairy sections annually estimate the quantities of poultry, eggs and dairy products which are farm-consumed, and also estimate the costs of these products at the prices paid to farmers.

Where other sources fail to supply the required data, it is assumed that the proportion of total production which is consumed on farms in any one year is the same as was the percentage of home consumption to total output in the year of the last census, that is 1946 for Manitoba, Saskatchewan and Alberta, and 1941 for the rest of the country.

In arriving at a rental value of farm dwellings it is impossible to determine the rent which they would bring if rented rather than used by the owner-operator. Farm rent either on a cash or crop-share basis is quoted for land and buildings together and it is not possible to break down such rent payments between house rent and rent for land and other buildings. Therefore an attempt has been made to estimate rent on the basis of actual cost of maintaining the farm dwellings, with allowances for repairs, depreciation and the interest on money invested, plus taxes on farm dwellings.

Estimated changes in the number of live stock and the quantities of grains on farms at the end of the year are readily obtainable from surveys conducted by the live stock and crop sections of the Agricultural Division, and to these quantities are applied farm prices which prevail at the close of the year. Thus it is possible to calculate the change in inven-

tory value which must be added to or subtracted from the other totals that go to make up the net income figure.

Farm operating expenses

As in the case of farm cash income estimates, much reliance is placed on other government departments, both federal and provincial, in determining operating expenses. The Bank of Canada provides information relative to the amount of taxes levied on farm property. The Feeds Administrator provides statistics on the quantity of feed grains shipped from western to eastern Canada under the Federal Freight Assistance scheme. Figures on grain sold to farmers by country elevators in the Prairie Provinces are obtained from the Board of Grain Commissioners.

Several provincial departments of highways or similar offices supply on request records of quantities of tax-exempt gasoline, used largely by farmers, sold each year. Truck licence fees can be obtained from the same sources. The provinces of British Columbia and Alberta provide information on the water costs in the several irrigation areas in those provinces.

The Bureau's annual Census of Industry, which was discussed in the June issue of this magazine, provides statistics on the production and plant value of many items used almost exclusively by agriculture. Many of these items, such as prepared stock and poultry feeds, fertilizers, insecticides, fencing materials, when adjusted in value to allow for transportation and retail mark-up are used in computing farm operating expenses.

The total farm wages bill (with and without board) is determined from the Bureau's own December survey. In this the Bureau by means of a questionnaire seeks information on several facets of the agricultural industry including data on the number of persons hired during the year, the rate of wages paid and the gross amount paid in wages during the year.

Utilization of data

From these two sources, the quarterly cash income and the annual net income, we can and do obtain a very fair picture of the eco-

nomic position of the Canadian farmer. It is not complete because, as has been mentioned, it does not contain any estimate of non-farm income. It does however show the gross amount of money received by farmers from farm operations, and at least the minimum sum available to the agricultural community after farm operations have been paid for.

Such data are of vital importance to almost every section of the community. Within the Bureau of Statistics itself several divisions other than that compiling the material find good use for it. The Federal Department of Agriculture in its various services relies extensively on the data presented in both reports.

Provincial departments of agriculture, which co-operate in every way in the collection of the statistics on which these reports are based, rely on them to a very great extent in their operations, as do other provincial departments interested in the economic condition of their respective provinces.

Those manufacturers producing goods primarily used by farmers are also consistent users of the material and indeed would like to see it augmented and particularized. One group of such manufacturers recently asked that consideration be given to breaking down the data now available only by provincial totals into county or crop district totals. Unfortunately such action is not, due in part to the cost and in part to the time element involved, practicable at this moment.

Distributors, both on the retail and wholesale level can utilize these figures, particularly the quarterly estimates of cash income, in order to estimate the probable buying potential within each province's rural areas. In many cases their inventory holdings could be enlarged or decreased as the estimate rises or falls below the figure for the same quarter of the previous year.

Farm organizations also must rely very largely on these data in their preparation of briefs for presentation to both the federal and the provincial governments. The data again are of use to such organizations in their constant study of farm operations, and in their efforts to increase farm efficiency.

CIVILIAN LABOUR FORCE

(14 YEARS AND OVER)

Current Economic Conditions

A review of the major factors which tend to influence Canadian economic developments indicates mixed trends in comparison with the two previous years.

The index of industrial production stood at 187.1 as compared with 184.1 for September, 1948 and 174.9 for September, 1947. The index for non-durable manufactures production was 185.3, an all time high as compared with 181.1 and 173.0 for September of the two earlier years, while that for durable manufacturers was 216.7 in September of this year, down from the 219.5 figure reached in September, 1948, but above the 210.1 figure for September, 1947. These seasonally-adjusted indexes are on a base 1935-39 = 100.

Railway revenue freight loadings for the month of September were estimated at 9,968,000 tons, 7.6 per cent below the 10,787,000 tons loaded in September, 1948, and 0.2 per cent below the September, 1947 figure of 9,983,000 tons. The number of freight cars loaded with revenue freight in the month of September of each of the three years under review was 363,000 cars (1949); 378,000 (1948) and 352,000 (1947).

The general wholesale price index last September was 155.4 compared with 158.4 in September a year ago and 134.0 two years earlier. This index has now declined steadily but slowly since a high of 159.6 was reached in December of 1948. The wholesale price index of Canadian farm products was 145.7 as compared with 149.7 and 133.5 in the two preceding years. The fluctuations of this index have recently been irregular since it dropped to 145.1 in February of this year and then reached 150.9 in July before again turning downwards.

Despite these drops in wholesale indexes the cost-of-living index has shown year to year increases since it stood at 139.4 in September, 1947, moved to 158.9 in September, 1948 and to 162.3 in September of this year. The October figure for this index is practically unchanged at 162.2

The index of common stock prices stood in the month under review at 109.6 somewhat lower than the 113.4 of a year ago but higher than the 104.1 of September, 1947. This index

for October, 1949, reached 114.3 which figure represents a considerable gain from the low of recent years which was 99.6 reached in June last.

Unemployment advances

Throughout the current year the number of unemployed persons, the number of days of consecutive unemployment, and the dollar total of benefits paid under the Unemployment Insurance Act have all been higher each month than in the same month of the previous two years.

The number of claims filed in the local offices during September last was 59,080 compared with 33,036 for the same month of the year 1948. For the same months the number of live unemployment insurance claims on the last working day of the month were 83,525 and 44,861. The amount of benefit paid in September, 1949, was \$3,671,773 while \$1,694,139 was paid in September, 1948, and \$1,512,096 in the same month of 1947. (A small increase in the amount paid to beneficiaries with dependents came into effect in October, 1948.) The number of days of proven unemployment in respect of which benefits were paid was 1,611,461 in September last, 871,967 in September, 1948, and 798,873 in September, 1947.

In February, 1949, at the peak of last winter's seasonal unemployment, the number of claims filed during the month totalled 108,759 and there were 208,818 live unemployment insurance claims on the last working day of the month. \$8,158,903 in benefit was paid in respect of 3,734,487 days of proven unemployment.

Despite the above, a survey of the civilian labour force taken in the week ended August, 20, 1949 indicates that there were more job holders in Canada at that time than ever before. A partial explanation of this apparent paradox lies, of course, in the fact that the number of persons in the labour force is increasing more rapidly than the number of persons with jobs. In addition some of those holding jobs, according to labour force definitions, may be able to claim benefit under the Unemployment Insurance Act.

The survey showed a labour force estimated at 5,253,000 persons, an increase of approximately 144,000 over the total for the week ended September 4, 1948. The number with a job (whether they worked at it or not) reached 5,155,000, an increase of only 113,000. Of the job holders the survey indicated that 121,000 worked 24 hours or less during the survey week and some of them were therefore under certain circumstances eligible to claim unemployment insurance benefits. The number idle but seeking employment was estimated at 98,000 not all of whom would, of course, for various reasons be eligible to receive benefits under the Unemployment Insurance Act.

Those not at work but seeking work thus represented about 1.9 per cent of the total estimated civilian labour force. In this connection it might be mentioned that the United States unemployed have been currently running at about 6 per cent of that country's civilian labour force.

Agricultural production

November estimates of the current wheat crop total 367.4 million bushels, some 26 million bushels below the 1948 estimate, while coarse grain estimates for 1949 are down markedly from 1948. Oats is estimated at 316.6 million bushels, barley at 120.4 million bushels, mixed grains at 55.7 million bushels representing declines of 42.2, 34.6 and 6.2 million bushels. The estimated wheat declines can be attributed to smaller crops in Saskatchewan and Manitoba more than offsetting gains in the rest of Canada. The smaller crop is reflected in the quantity available for export and carry over. The 323.3 million bushels available in the current year are 6.4 million bushels lower than last year's figure.

Exports in August and September have totalled 40.4 million bushels of which 19.5 million have gone out under the International World Wheat Agreement, while the United States has exported 11.8 million bushels and Australia 6.9 million bushels. This is the first year that this agreement has been in effect.

The October estimates for this years apple crop are higher at 17,339,000 bushels, 29 p.c. above 1948. The increase was general in all producing provinces with Nova Scotia, Quebec and Ontario leading. Peach and pear crop

estimates also have increased with the pears now totalling 996,000 bushels, an increase of 26 p.c. above last year's figure, and peaches increased 16 p.c. to 2,034,000 bushels.

After a downward trend since June, milk production in August increased because of better pasture conditions. Of the milk produced during August 1,117 million pounds or 64 p.c. was utilized in factory produce, a decrease of 52 million pounds from a year ago. This decrease however was offset by an increase in the sale of fluid milk and cream (the latter expressed as milk), of 13 million pounds, bringing the total to 324,834,000 pounds. The actual cash income from the sale of dairy products was down \$6,550,000 from last year to \$36,263,000. One of the chief causes of this was the drop in milk price, which during August was \$2.51 per hundred pounds, as compared to \$2.83 a year ago.

Dairy butter production was also lower in August this year, bringing the January-August total to 37,515,000 pounds, 9 p.c. below last year's figure. Creamery butter production totalled 39,312,000 pounds, a decrease of 6.8 p.c. from last year. Butter stocks at September 1 were 67.4 million pounds, up 15 million from a year ago. Domestic consumption at 28 million pounds was 8 million below last year. This difference could, in part at least, be attributed to the introduction of margarine production.

The prices received for all agricultural products continued down for the third consecutive month. The index of farm prices at 249.3 (1935-39 = 100) is 12.2 points lower than a year ago. This decrease was due to lower prices for grains, live stock, and dairy products more than offsetting higher prices for potatoes, poultry and eggs. The decrease in grain prices is due in part to the Canadian Wheat Board's taking over the marketing of coarse grains and making only an initial payment which may be supplemented at a later date.

Retail trade advances

The value of Canada's retail trade transactions in September was estimated at \$685 million, an increase of \$46 million or 7.2 per cent over the total of \$639 million reached in September, 1948. Sales were also 6.4 per cent higher than the total of \$644 million for August of this year.

Total dollar sales for the first nine months of the current year amounted to an estimated \$5,543 million, an increase of 7.1 per cent over the \$5,175 million recorded during the same period of the year 1948. A rather uniform rate of increase over the totals for the previous year has been noted in each of the past several months with gains ranging from 5 to 8 per cent being recorded in the period May to September.

Nearly every kind of retail store reported moderate sales gains in September of this year over the same month of last year, with similar increases for the nine month period. Among the few increases which exceeded the average gain of 7.2 per cent were those of motor vehicle dealers with a 28 per cent jump comparing September, 1949 with that of 1948, and furniture stores with a gain of 10 per cent. The motor vehicle trade has maintained a consistently high rate of increase throughout 1949 and had a cumulative gain of 20 per cent in the nine months' comparison. Further evidence of increased activity in the automotive field is reflected in the sales increases for filling stations and garages which amounted to 12 per cent comparing September, 1949 with the same month of the earlier year, and 11 per cent in nine-month cumulative totals.

A very noticeable change in trend occurred in the case of coal and wood dealers whose sales increased 12 per cent in the monthly September comparison, but still showed a 6.5 per cent shrinkage when the nine-month totals of each year are compared.

Declines from September of last year were noted only in country general stores which had a 3 per cent drop, and in the allied lines of men's, family and women's clothing which had declines of 1.5, 3.2 and 7.6 per cent.

Provincial sales increases in September were remarkably consistent with those for the first nine months of the year. Increases for the Prairie Provinces were higher than were those for other provinces, both in the September and in the nine month's comparison, but the margin of difference in rate of increase between the Prairie and the other provinces was narrowed slightly.

American developments

The recent strike in the steel industry is now ended and the workers in the coal industry

have, in the main, returned to the pits. The severity with which the two strikes hit the United States industrial scene can be judged by the rapid decline in the Federal Reserve Board's index of industrial production. The October figure was 152 as compared with September's 172 and an all time high of 195 reached in November, 1948. The declines of 11.6 per cent from the previous month and 20.5 per cent from the high can be attributed, in large part, to the partial paralysis induced in nearly all phases of industry due to the lack of the essential elements of steel and coal.

The Director of the United States budget estimates that his country's budgetary deficit for the fiscal year ending June 30, 1950, will amount to approximately \$5.5 billion, the highest peace time deficit ever recorded. The deficit for the fiscal year ended June 30, 1949, amounted to \$1.8 billion. In the current fiscal year it is estimated that receipts will total \$38 billion and expenditures \$43.5 billion. \$12.3 billion or 28.5 per cent of all expenditures are to be spent on various defense projects.

Consumer credit rose to a record high of \$16.8 billion in September last, as compared with \$16.5 billion in August and \$14.5 billion in September of last year. A rise of \$122 million in automobile sales credit was the greatest single factor in the September increase over the previous month.

United States metal prices have turned somewhat higher in recent weeks. Steel scrap which on October 29 was quoted at \$25.58 a ton advanced to \$28.92 on November 15; copper moved from 17½ to 18½ cents per pound during the same period; zinc from 9½ cents a pound to 10 cents; while lead declined slightly from 13 cents a pound to 12¾. Canada is a large exporter of the three last mentioned metals.

Signs of renewed retail purchasing in the United States are to be found in the fact that department store sales for the week ended November 5 were only 2 per cent below those of the comparative week of the previous year. This is the best week-to-week comparison in several months.

The Bureau of Agricultural Economics in a forecast of 1950 business conditions indicates that "A further slight reduction in economic activity and a relatively slow decline in prices appear likely".

2

⁽¹⁾Not applicable to Column 5 "Average hourly earnings".⁽²⁾Annual data as of June 1 are adjusted to include certain remote parts of several provinces which are not covered in the quarterly surveys. Quarterly data as of November 8, 1947 and February 21, June 5, September 4, November 20, 1948, and March 5, June 4, and August 20, 1949.⁽³⁾Includes only those not at work and seeking work. ⁽⁴⁾Includes retroactive payments to railway employees.⁽⁵⁾Prior to 1945, figures shown are those relating to hourly earnings in one week in the month of highest employment (overtime included) reported by manufacturers to the annual Census of Industry. For period beginning in 1945, see table 12. ⁽⁶⁾Conversions are included with annual data only.⁽⁷⁾Includes Newfoundland as of April, 1949.

*Under revision.

⁽¹⁾ Personal income is given on an annual basis for months as well as for years.⁽²⁾ Includes army civilian supply exports from February 1947.⁽³⁾ Annual totals are averages of end of month figures.⁽⁴⁾ Standard and Poor's Corporation. The series currently used represents 416 stocks.⁽⁵⁾ Series revised to incorporate changes in classification and adjustment to bench mark levels. Revised data prior to August 1948 will be shown later.

⁽¹⁾As of June 1. ⁽²⁾Exclusive of stillbirths. ⁽³⁾Not applicable to figures on population.⁽⁴⁾Yukon and North-

West Territories not included in figures for births, marriages and deaths.

⁽⁵⁾Newfoundland data are included as of June 1, 1949.

Note.—Until the end of 1947, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1948 are preliminary but tabulated in the same way. Monthly figures for 1947, 1948 and 1949 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that Province is disregarded.

(1) Monthly data as of end of month while annual section is based on averages of month-end statistics.

(2) As of July 1949, due to changes in method of recording payments, the number of benefit payments (equivalent to the number of beneficiaries) in the week which includes the third Friday of the month, has been substituted for the number of persons receiving benefit in the month.

(3) Prior to 1944 data included deferred as well as current vacancies.

Note: As of April 1949, Newfoundland is included.

⁽¹⁾Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.⁽²⁾Totals include unspecified pulp.

⁽¹⁾ Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

⁽²⁾ Excluding producers' interchange.

⁽³⁾ Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

⁽⁴⁾ Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

Shipments of Primary Iron and Steel Shapes to Consuming Industries
(Carbon and Alloy)

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

⁽¹⁾The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽¹⁾Figures cover the production of firms which normally account for 85 per cent of the total for Canada.⁽²⁾Since January, 1949, includes concrete chimney blocks. ⁽³⁾Prior to 1947 data on producers' sales were used to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjusting producers' sales for changes in inventories. ⁽⁴⁾Includes Newfoundland as of May 1949.

⁽¹⁾Includes imports to the end of 1948-49 while in 1949-50 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

⁽²⁾Figures of customs exports from 1945-46 to 1947-48 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1948-49 are customs exports and will be adjusted when required information is available. ⁽³⁾Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption. ⁽⁴⁾Includes customs exports of Canadian oatmeal and rolled oats.

⁽¹⁾ Available for January, April and August only. 1948 and 1949 indexes are subject to revision.⁽²⁾ Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.⁽³⁾ Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.⁽⁴⁾ Prior to 1941 prices were quoted on a live weight basis.⁽⁵⁾ Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

⁽¹⁾Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transaction, e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

⁽²⁾Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board.

⁽³⁾Does not include proceeds of 100 million dollar loan floated by the Government of Canada in the United States in August.

*See footnote of page 96.

⁽¹⁾The annual statistics embrace all steam railways, while monthly data refer to railways with annual operating revenues of \$500,000 or over. ⁽²⁾Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities. ⁽³⁾For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling \$29,085,087, paid in September 1948, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scale.

Note: Newfoundland data are included as of April, 1949.

115

⁽¹⁾Prior to 1935, includes gold and coin and Dominion notes held by the banks in Canada and the deposits in the Central Gold Reserves not ear-marked against the issue of bank notes, and, since 1935, notes of, and deposits with, the Bank of Canada.

⁽²⁾In 1926, 1929 and 1933, includes only foreign currencies.

Beginning in July 1949, certain advances that were formerly classified under "Miscellaneous Loans and Advances" are now included in the new category "Working Capital Advances to Crown Corporations".

This account does not appear on the monthly statements. Revised figures on the new basis are not yet available for April, May and June 1949. The data for the corresponding month of the previous fiscal year are comparable to those for the current year.

⁽¹⁾Does not include advances to Foreign Exchange Control Board which are equivalent in substance to cash balances either in Canada or abroad, nor temporary investment of surplus cash in the Government's own securities. ⁽²⁾Includes assumption of Newfoundland guaranteed stock of \$71,709,459.

Note: Credit items are due to repayments and transfers between departments and classes of expenditure.
