Railway Statistics

Railway statistics are always valuable barometers of economic conditions in a country. In Canada, however, they are of special significance, because the geographic structure of the country, the comparative paucity of population and the rugged terrain make us more dependent than almost any other country upon railroads for transportation.

Canadian railroad statistics are comprehensive, and fall into two main groups: those dealing with traffic — "car loadings" and "tonnage carried" etc. — and those covering financial accounts. Traffic statistics throw light on economic activity both in the country as a whole, in specific industries and within regions. Car loadings have a particular importance, because they are published weekly (as well as monthly) and are one of the few available weekly business indicators. These traffic figures also give a variety of information valuable to individual business men when facing specific problems. For example, produce merchants secure an idea of the movement to market of vegetable, fruit and dairy products; grain dealers, shipping interests, etc., have an indication of grain movement; while cattle loadings are most useful to packing houses and exporters.

The financial statistics of the railroads are naturally of interest to brokerage houses, to investors in the privately-owned systems, and to analysts of government finance. Their importance, however, spreads a good deal wider than this, because the financial position of the roads is one of the considerations in determining the level of freight rates, and there is no section of the economy which is not directly or indirectly affected by this problem.

Summary Tables in Canadian Statistical Review

Statistics covering car loadings, tonnage hauled, financial operating returns, passengers carried, number of workers employed and wages paid, etc. etc., are supplied to the Dominion Bureau of Statistics by the individual railroads. These including American systems running into this country, amount to thirty-two, but eighteen of them own or control less than one hundred miles of track each.

A summary of the principal figures appear in tables 52 and 53 of the *Canadian Statistical Review* (pp. 108 to 111). The first of these

shows monthly car loadings of revenue freight loaded on Canadian railways by type of commodity broken down into nineteen categories. While it is the usual practice in the Review's tabular matter to supply comparable data for the ten years immediately past and for certain key years going back to 1926, this has not been done in this table since increases in the capacity of cars and improved techniques of loading have been so great that car loadings are not comparable over a long term of years. Car loadings are, however, given for the last thirty-eight consecutive months thus allowing for short term comparisons and observation of the rather striking seasonal variations in activity. The prime cause of such variations is, of course, the movement to the head of the Lakes and to both seaboards of vast quantities of grain in the fall of each year after the prairie harvest.

Table 53 presents in summary form the principal statistics available monthly on the financial results of the operations of the railways (not including hotel, steamships, etc.) together with a statement of the revenue freight and number of passengers carried. The yearly data are for all railways operating in Canada while the monthly data are only for those with annual operating revenue of \$500,000 or over. These number sixteen, but during 1947 their operating revenues were 98.9 per cent of the total reported by all thirty-two systems.

The table shows revenues from both freight and passenger operations, operating expenses and net operating income for all systems and for the Canadian National and Canadian Pacific individually. Net operating income as shown in this table is not the difference between revenue and expenses since adjustment is made for tax accruals and for the rentals to be paid for the use of certain equipment and joint facilities. The amount of this adjustment is shown in the monthly report on operating revenues and expenses discussed below.

Weekly and Monthly Publications

The weekly report *Car Loadings* shows the number of cars loaded with revenue freight from Sunday to Saturday for all of Canada and for the eastern and western divisions (the break comes immediately west of Fort William). It is published on the Friday following the

close of the week. Car Loadings are broken down by material loaded and comparable data are given for the two previous weeks and for the closest week of the previous year. Cumulative totals are also given for the current and the two previous years. An index number, based on the 1935-39 averages, is quoted for each of the last six weeks of the current year and for similar periods in the previous year. The total number of car loads received from foreign connections (i.e. U.S. Lines or shipping originating in a foreign port) is also shown.

Railway Revenue Freight Loadings, appearing three weeks after the close of the month, is a monthly preliminary estimate of the number of cars and tons of freight loaded. Loadings for each available month of the current year and for each month of the seven previous years are shown both as absolute numbers and as expressed by an index number based on the 1935-1939 period.

The last in the series of monthly publications dealing with revenue freight is the *Monthly Traffic Report of Railways of Canada*, a very detailed discussion of freight carried expressed in terms of tonnage only. It sets forth the volume of freight loaded in Canada during the month, the tonnage received from foreign connections destined both for delivery in Canada and in transit to foreign points. It gives both the month's figures and the cumulative totals to date together with the increase or decrease in tonnage from similar periods of the earlier year. Terminations, that is freight unloaded at stations in Canada and that delivered to foreign connections, complete the picture. The breakdown into commodities is considerably finer than that used in the weekly *Car Loadings* and is under five main divisions and seventy-eight sub-divisions.

The second portion of this publication shows tonnage loaded and unloaded in each of the provinces of Canada under a commodity breakdown identical with that outlined above. These statistics can in no way be taken as covering all interprovincial trade, since they exclude transfers of commodities by truck or water. Neither do they indicate the provincial origin of tonnage unloaded. Nevertheless they throw a useful light on whether a province is a net importer or exporter of certain commodities.

The last of the monthly publications, *Operating Revenues, Expenses & Statistics-Railways in Canada with Annual Operating Revenues*

of \$500,000 or Over, is published about sixty days after the close of the month. This presents in detailed form the material summarized in table 53 of the Review. It gives both financial and general operating statistics for all railways combined (subject to the \$500,000 revenue reservation) and for the two largest Canadian systems individually.

Annual Publications

Several annual reports are also published. *The Summary of Monthly Railway Traffic Reports* is, as its title indicates, primarily a condensation of the monthly report already discussed but it contains in addition two rather interesting tables not elsewhere published. The first of these discusses, under the usual commodity breakdown, the freight originating and terminating in the area covered by the three maritime provinces of Prince Edward Island, Nova Scotia and New Brunswick. The second table deals similarly with origins and terminations in the western provinces of Manitoba, Saskatchewan, Alberta, and British Columbia, considered as a single entity. From these data net import from, and exports to the rest of Canada may be determined.

Statistics of Steam Railways in Canada is a complete presentation of all available statistical material on railway operations. It is issued about eight or nine months after the close of the year and contains in expanded form all the material to be found in the reports discussed above together with detailed reports on the financial structure of operating companies, numbers of employees and their earnings, analyses of fuel costs, maintenance costs, expansion costs, taxes paid, reports on accidents and deaths of or injuries to both passengers and employees, etc. The current volume for the year ending December 31, 1947, consists of three pages of explanatory text and nineteen tables presented on 134 pages.

In addition, the Bureau of Statistics issues *Canadian National Railways (1923-1947)* and *Canadian Pacific Railway (1923-1947)*. These present a brief historical survey of the revenues and expenses of the two systems and a condensation of operational statistics over the twenty-five year period since the incorporation of the C.N.R. They are revised each year to include the latest annual data and the C.P.R. statistics have been placed on a comparable basis with those of the C.N.R. by the inclusion of Express and Telegraph Departments, etc.

CANADA'S FOREIGN TRADE
PREWAR AND POSTWAR
QUARTERLY TOTALS

Note: - Different scales have been used in each chart.

Current Economic Conditions

The index of industrial production reached 184.1 in September, 1948, and held for the next three months between this figure and 185.7 reached in December. In January, 1949, it dropped 3.6% to 178.9. The sub-index for all manufactures was off 4.3% at 188.5 from 197.2 for December with that of non-durables off 4.1% from 180.2 to 172.7 and that for durables off 4.2% from 226.3 to 215.6. Manufacture of motor vehicles was primarily responsible for this decline, falling from 201.0 in December to 108.5 in January. This decline was caused, in part at least, by temporary shut downs for retooling purposes during January.

Railway car loadings of revenue freight totalled 289 thousand for February last, 300 thousand for January and 316 thousand for December. The comparable figures for the preceding year were 286 thousand in February, 317 thousand for January and 321 thousand for December (1947). Car loadings for the week ending March 19 totalled 72,991 compared with 74,194 for the previous week and 76,239 for the corresponding week last year.

The cost-of-living index stood on February 1 at 159.5 very slightly down from 159.6 in January. From September, 1948 to February, 1949, fluctuations in this index have held within the narrow range of 158.9-159.6. The general wholesale price index was off very slightly from December to January, as were the wholesale price indices of consumers' goods, producers' goods, industrial materials, and those for both partly and fully manufactured goods. The wholesale price index for general building materials ran against the trend increasing slightly. The wholesale price index number of Canadian farm products stood at 226.2 for January compared with 227.6 for December.

February merchandise exports were valued at \$205 million, down about 1.5% from those of

the same month in 1948. Sales of domestic products to the United States amounted to \$106 million during the month compared with \$94.8 million in February of last year, an increase of 12.6%. This was more than offset by declines in the sales to the United Kingdom which were off 14.7% from \$51.7 million in February, 1948, to \$44.1 million in February, 1949, and in sales to other European countries which dropped 33.2% from \$25.9 million to \$17.3 million.

Cash Farm Income Soars

A preliminary estimate of farmers' cash receipts from the sale of farm products in 1948 recently published by the Bureau indicates that this amounted to \$2,450 million in 1948, \$488 million or approximately 25% above the previous high record of \$1,962 million established in 1947. When payments under the Prairie Farm Assistance Act are included the comparable amounts are \$2,470 million in 1948 and \$1,974 in 1947. This cash income from the sale of farm products amounted in 1948 to almost four times the 1935-1939 average of \$623.5 million.

High levels of domestic purchasing power plus strong world demand combined to lift Canadian agricultural prices approximately 20% above the 1947 levels and this fact together with increased supplementary payments and larger distributions by the Canadian Wheat Board of participation payments, rather than increased production, was responsible for the farmers' higher receipts.

A 30% increase in the number of cattle and calves marketed during the year, brought about largely by removal of restrictions on exports to the United States, and considerably higher prices made the sale of this commodity the greatest single source of income for the farmers in 1948. Sales of cattle and calves were

valued at \$433.7 million up 84.4% from \$235.3 million in 1947.

Sales of wheat grown in 1948 amounted to \$401.7 million while participations and adjustments from previous crops brought growers an additional \$158.4 million, the comparative figures for 1947 being \$346.8 million and \$73.8 million. Sales of dairy products at 389.6 million and hogs at \$300.8 million were next in order of importance during the last year.

Ontario, with an increase in farm income of \$127.1 million from \$541.3 million in 1947 to \$668.4 million in 1948, showed the greatest absolute increase. Manitoba had the greatest percentage gain with a 33.9% increase from \$181.4 million to \$243.4 million.

Report on Retail Sales

The Dominion Bureau of Statistics has, over the past two years, completely revised its retail trade statistics on which the *Monthly Report on Retail Sales* was based. As a result of the revision this report has been discontinued and effective from January 1, 1949 has been replaced by *Retail Trade*, to be issued monthly. Whereas previously the dollar value of sales in various types of stores was reported in terms of index numbers, based on 1935-1939 = 100, the data will now be recorded in terms of dollar value directly. Sales for 20 different types of stores and for an "all other stores" group will be given.

Data for three groups of stores — food, country general and department — has been compiled on an annual basis from 1941 to 1946 inclusive, and on a monthly basis for 1947 and 1948. For all the other groups of stores the annual material has so far been compiled only for 1941, but when it is assembled for the other years it will be incorporated in a supplement to *Retail Trade*.

This revision of the report on retail sales has, of course, necessitated revision of table 45 of the *Canadian Statistical Review*, which starting with the present issue, will present a summary of the material to be found in the new report. This summary will, at present, show total sales in dollar value and the value of sales in the 16 most important types of stores, for the year 1941, 1947 and 1948 and for the last 25 months.

When all the 1942-1946 data is available it will be included in table 45. While the breakdown of sales by economic areas in the new report lists each of the prairie provinces individually, limitations of space require that the Review retain the former grouping of these provinces in a single unit.

Preliminary estimates based on the new series indicate that Canada's retail trade for 1948 totalled \$7,276 million, up 10.9% above the total of \$6,563 million for 1947 and 111.7% above the 1941 figure of \$3,437 million. The Bureau's 1948 index of retail prices was up 19.2% from the 1947 figure and 54.4% above that for 1941.

Improvements in the Balance of Payments

The two outstanding developments in Canada's balance of international payments during 1948 were the substantial increase in the overall surplus with all countries and the even more marked decrease in the deficit with the United States. The latter, together with other factors, permitted Canada nearly to double her U.S. dollar reserves during the year. The elements contributing to these changes were discussed in the report recently published by the Bureau, *The Canadian Balance of International Payments, Preliminary Estimate, 1948*, and in the *Annual Report of the Foreign Exchange Control Board, 1948*. They are summarized in the tables on page vi.

Canada's surplus on current account transactions with all countries amounted to \$453 million (excluding shipments of official relief), compared with \$47 million in 1947. Total receipts from all countries amounted to \$4,139 million in 1948 compared with \$3,746 million in 1947, while total current payments were \$3,667 million in 1948 compared with \$3,661 million in 1947. The increase in the surplus was largely accounted for by merchandise exports expanding more rapidly than merchandise imports, but in addition "invisible exports" (i.e. receipts from tourist trade, freight and shipping, etc.) all showed an increase in 1948 over 1947 whereas "invisible imports" (payments on interest and dividends, expenditures of Canadian tourists abroad, etc.) declined slightly. The substantial increase in exports of merchandise, however, was almost

entirely due to higher prices rather than greater volume; the indications are that the volume of merchandise exports in 1948 was about the same as in 1947 and the volume of imports about nine per cent less.

Important changes took place in the geographical distribution of Canada's merchandise trade, particularly in regard to the destination of exports. These changes are shown in the following table:

DESTINATION OF CANADA'S MERCHANDISE EXPORTS (percentages of total exports)

	United States	United Kingdom	Other Sterling Areas	Other E.R.P. Countries	Other Countries
1935-1939	37%	37%	10%	7%	9%
1947	39	28	13	12	8
1948	50	23	10	10	7

ORIGIN OF CANADA'S MERCHANDISE IMPORTS (percentages of total imports)

	United States	United Kingdom	Other Sterling Areas	Other E.R.P. Countries	Other Countries
1935-1939	61%	18%	11%	6%	4%
1947	77	7	6	3	7
1948	69	11	7	3	10

Relatively few changes took place in the type of goods exported from Canada, although there was a substantial increase in shipments of beef and beef cattle and coarse grains to the United States following the removal and relaxation of export controls. By far the greater majority of our exports were, as normally, basic commodities, mainly unprocessed or semi-processed, and in spite of the great industrial expansion in Canada during the war it has proved difficult to maintain as much of an increase in exports of manufactured products as had been hoped. During 1948 there was some increase in the volume of these goods sent to the United States, but this was offset by a decrease in exports of them to other countries, which, in view of their dollar shortage, are trying to limit their imports from the Western Hemisphere to those necessary goods, such as food stuffs and raw materials, not obtainable elsewhere.

Transactions by Regions

The increase in exports to the United States and the decrease in imports from that country were the major causes of the improvement in

our dollar position. Our current account deficit with the United States in 1948 was \$401 million, compared with \$1,135 million in 1947. The debit on merchandise trade was reduced from \$903 million in 1947 to \$289 million in 1948; there were also slight reductions in the debits for interest and dividends, freight and shipping, and other items, and increases in the credit from tourist expenditures and exports of newly mined gold.

On capital account with the United States there was a net credit to Canada of \$127 million. In addition \$770 million was received in convertible exchange from countries other than the United States, and in total these various amounts increased Canada's holdings of gold and United States dollars by \$496 million (from \$502 million to \$998 million). This compares with a decrease of \$743 million during 1947.

In transactions with the United Kingdom, Canada's current account surplus declined from \$633 million to \$488 million. While to some extent this was caused by a decline in exports (down to \$923 million from \$967 million) it was mainly due to an increase in imports

(\$435 million compared with \$334 million), a healthy development. With the sterling area as a whole and other E.R.P. countries, however, the trend was not so good. Canada's current account surplus with those countries declined from \$1,148 million in 1947 to \$846 million in 1948, the change being covered by a decrease in exports to those countries of \$156 million and an increase in imports of \$148 million. When transactions with the United Kingdom are excluded, it emerges clearly that the rest of the sterling area and E.R.P. countries have used restriction of imports to decrease their debit balance with Canada rather than increasing sales of their products to us.

Disturbed Condition in World Trade

Here lies a serious problem concerning not only Canada but the whole future of world multilateral trade. As the report of the Foreign Exchange Control Board points out, the desirable way for the sterling area and E.R.P. countries to correct their dollar shortage is to increase their exports to the Western Hemisphere rather than to curtail their imports. Unfortunately, however, under the stimulus to reduce as far as possible their need for E.R.P. assistance, these countries have recently increased restrictions on imports from North America and have entered into a variety of bilateral trade and currency arrangements designed to facilitate trade between themselves. Much of this trade is being carried on at prices higher than would be the case if North American countries were free to compete for it, with the result that the cost and price structures of these countries are being steadily raised. This will make it progressively harder for them to sell their goods in the North

American markets and this make the eventual achievement of free multilateral trade more difficult.

In addition to these restrictions on Canada's exports, there are other matters to be considered. For example, if wheat should be declared surplus in the United States, this would automatically prevent the use of E.R.P. funds by European countries for the purchase of Canadian wheat, which has been a substantial source of convertible exchange from abroad. Then again, the great improvement in our balance with the United States during 1948 was to a some degree the result of restrictions placed on the import of consumers' goods and capital equipment and on Canadians travelling in the United States; some of these restrictions have already been removed and others relaxed and some increase in imports has already taken place.

The problems posed to Canada by the disturbed state of world trade were referred to by the Minister of Finance in his budget speech. He mentioned that some people might suggest that Canada should follow the lead of other countries and embark on bilateral agreements, but he pointed out, with supporting argument, that this could only give short-run benefit and would in the long-run be most detrimental to our trading position. He referred, as a positive approach to the problem, to meetings being held at Annecy to enlarge the scope of the Geneva Trade Agreements, and that the Government hopes that when the legislation now before the United States Congress to extend the Reciprocal Trade Agreements Act is passed it will be possible to conclude a further agreement with that country to open up wider possibilities for the export of Canadian manufactured goods.

⁽¹⁾ As of June 1.⁽²⁾ Exclusive of stillbirths.⁽³⁾ Not applicable to figures on population.⁽⁴⁾ Yukon and North-West Territories not included in figures for births, marriages and deaths.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾ As of June 1.⁽²⁾ Exclusive of stillbirths.

9

⁽³⁾ Not applicable to figures on population.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

⁽¹⁾Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.⁽²⁾Excluding producers' interchange.⁽³⁾Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.⁽⁴⁾Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

Shipments of Primary Iron and Steel Shapes to Consuming Industries

⁽¹⁾The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽¹⁾Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.⁽²⁾Figures of customs exports for 1945-46 and 1946-47 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1947-48 are customs exports and will be adjusted when required information is available.⁽³⁾Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.⁽⁴⁾Includes customs exports of Canadian oatmeal and rolled oats.

⁽¹⁾ Available for January, April and August only.⁽²⁾ Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.⁽³⁾ Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.⁽⁴⁾ Prior to 1941 prices were quoted on a live weight basis.⁽⁵⁾ Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.⁽⁶⁾ Subject to revision.

⁽¹⁾Australia, New Zealand, South Africa, India and Pakistan.⁽²⁾Includes Belgium, China, Czechoslovakia, France, Netherlands, Netherlands Indies and Norway.

Source: Monthly Report; Imports for Consumption, Trade of Canada, D.B.S.

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada.

Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies.

Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

(2) Official holdings of Gold and U.S. dollars are given as of end of month in Statistical Summary of the Bank of Canada.

*See footnote of page 106.

Carloadings of Revenue Freight on Canadian Railways

⁽¹⁾The annual statistics embrace all steam railways, while monthly data refer to railways with annual operating revenues of \$500,000 or over.

⁽²⁾Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities.

⁽³⁾For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling \$29,085,087, paid in September, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scales.
