Census of Industry

The Dominion Bureau of Statistics was charged, under the Statistics Act of 1918 (now replaced by the Statistics Act, 1948) with the taking, at appropriate intervals, of a census of industry and production. Since 1917 an annual survey of the production of manufacturing industries in Canada has been made. Subsequently, co-operative arrangements were made with departments of Government concerned with the collection of statistics on the primary industries of mining, forestry and fishing whereby the Bureau would collect statistics of production and related information and make such data available to the departments.

The Census of Industry as presently constituted is therefore concerned with the collection, compilation and distribution of statistics relating to the operation in Canada of all primary industries, except agriculture, and of manufacturing. This survey is made annually and is supplemented by the collection of monthly or quarterly statistics of production and in certain instances stocks, of key commodities, which time has shown to be good barometers of business, and in addition furnishes valuable and up-to-date data which can be used as a guide by those industries producing such commodities.

The Census of Industry is divided into five sections. These are (a) the Animal Products Section (b) the Forestry Section (c) the Fisheries Section (d) the Mining, Metallurgical and Chemical Section and (e) the General Manufactures Section.

The Forestry Section, the Fisheries Section and the Mining, Metallurgical and Chemical Section deal with the collection of data covering the output of the primary product or products concerned and follow these primary products through the secondary manufacturing processes necessary to convert them into consumable goods. Thus the Forestry Section gathers data and reports on logging operations;

on the output of sawn lumber; on the operation of planing mills; on the production of pulp and on the ultimate output of paper of various kinds.

The Animal Products Section differs slightly from the others in so far as it is concerned only with the processing of foods and other products, primary production statistics being gathered by that section of the Bureau of Statistics compiling agricultural data.

The General Manufactures Section has a threefold function. First, it reports on the manufacturing operations of those firms engaged in manufacturing articles which are not specifically covered in the first four listed divisions, and secondly, it collates all manufacturing figures reported by the other divisions and thus presents a general picture of Canada's manufacturing activities. Thirdly, it gathers data on those manufacturing firms not specifically covered by the first three groups.

Detailed studies of the operations and functions of each of these five main subdivisions of the Census of Industry will be published in subsequent issues of this Review since it is obviously impossible to do justice to their multifarious activities in an article of a general nature discussing the Census of Industry as a whole.

Construction and Capital Expenditure

In addition, other sections of the Census of Industry Division deal with construction and capital expenditure during the year. The former, which has now been in operation about fifteen years, maintains a comprehensive survey of all classes of building construction, including types of materials used and their costs, value and type of finished structures, capital investment, wages and salaries paid, number of employees in the industry at stated periods and the number of hours worked. The data are supplied to the Bureau on questionnaires sent to all individuals and firms engaged in the

construction industry as contractors, builders, etc. All ordinary building operations of those contractors engaged in the construction of dwellings, office buildings, factories, steam and electric railways, hydro-electric plant construction, highway construction of all types, culverts and bridges, docks, piers; in fact, all types of structure or immovable plant are covered. From these data the Construction Section is able to present in a single comprehensive report a complete survey of all construction work undertaken in the year.

The section dealing with capital expenditures in industry obtains, by means of questionnaires, a record of the amounts spent on new construction, machinery, and equipment and on repairs to structures and equipment each year. The data are obtained only from those firms engaged in primary or secondary production where the gross value of the year's output exceeds \$50,000 and from the more important operators in the service industries. About 15,000 manufacturing firms are contacted and a further 5,000 operators in the other industrial groups.

Census Coverage

The census, which covers, as far as possible, every individual operator, partnership, incorporated company and co-operative engaged in the production of primary or secondary products, is conducted by mail for complete annual reports and for monthly reports on production only where this material is required. The procedure is that the Bureau mails to every firm a schedule seeking by means of questions the detailed information it requires and asks the receiver to mail the completed return back within 21 days. All firms are supplied the questionnaire in duplicate and are asked to retain one completed copy on their own files. Thus if further correspondence concerning any item is necessary the reporting firm can refer to its own copy of the schedule in reply to the Bureau's request for clarification.

Since this is an industrial census rather than a record of gross production much more than a mere counting of output is sought. The annual schedule in the case of manufacturers asks for detailed information of such points among others, as (a) nature of business;

(b) exact location of plant by city, county and province; (c) salaries, wages and commissions paid; (d) number of salaried employees and wage earners on payroll at the last working day of each month of the calendar year under review; (e) power equipment subdivided by type of equipment and horse power rating, both that ordinarily in use and that held in reserve or otherwise idle; (f) fuels and electricity used during the year with an indication of both the quantities used and cost at factory; (g) materials and supplies used both by quantities and by total cost; and (h) details of products made giving quantities and selling prices at plant.

The schedules sent to producers of primary products are, of course, adapted to the needs of the particular product but they follow the same general pattern as that outlined above with those questions concerning output and materials used replaced by others designed to elicit the specific information desired. The monthly schedules sent firms in those industries where monthly output totals are desired are much simpler and ask only for production totals by volume of units produced and in some cases for the factory selling price of them.

The data assembled by these means are compiled in the appropriate section of the Bureau's Census of Industry Division and monthly totals of production of all firms combined are published where these are available. When only a small number of producers are in the field the Bureau usually indicates by name the reporting firms. Every precaution is, of course, taken to keep individual reports confidential and without a firm's specific authorization none of its reports are shown to any individual, any other governmental agency or to any provincial or municipal authority.

Yearly the Bureau publishes comprehensive reports on the various industries covered such as: "paint and varnish manufacturing", "the coal mining industry", "the gold mining industry", "various sections of the textile industry", "farm implement manufacturing", "the pulp and paper industry", etc. These reports based on the annual questionnaires referred to above show the gross number of persons employed in the industry, the total output by items, the selling price at plant, the

quantities of materials used and their cost. In the case of manufacturing, these data are further summarized and analyzed in two publications entitled (a) *The Geographical Distribution of the Manufacturing Industries of Canada* and (b) *the Annual Summary of the Manufacturing Industries of Canada*.

Users of the Reports

The material thus compiled and published is of great value to a vast number of persons and organizations. Through it is indicated to the people of Canada the economic health of the nation, since the Census of Industry, when considered as an entity, clearly shows whether or not industrial activity has increased or decreased from one year to another. Further it shows in what specific industries advances or declines have been made and supplies the data from which the extent of these movements can be measured.

Federal, provincial and municipal governmental departments rely upon the statistics of production and consumption in planning tax rates and estimating yields. During and after the war period the federal government's price fixing, material allocation, and control measures were, to a great extent, based upon the knowledge of production and consumption gained through the operations of the industrial census.

Banks, insurance companies and other financial agencies study the reports on various industries, noting their growth and output from year to year before placing their own or their clients' capital in firms operating within the industry.

Trade and labour unions and their officials find in the material supplied by the Census of Industry data of vital importance to themselves. Statistics on the number of persons engaged in any industry, on the number of days worked per year, on the gross amount paid out by the industry in wages are all essential to union officials in determining future poli-

cies, in entering into wage contracts, in establishing apprenticeship regulations, etc.

The greatest importance of the Census of Industry, however, is to the firms and individuals contributing towards its collection by their individual reports. While under no circumstances can a firm learn anything of the operations of an individual competitor it can evaluate its own position and importance in the industry through a correlation of its own statistics to those of the whole industry. A study of the data assists a firm to determine whether or not its labour force is efficient, whether its operating costs and materials costs are above or below the norm, whether or not in an expanding market it is obtaining its fair share of the increased business, thus using the figures of the whole industry as a yardstick by which to measure its own efficiency.

Market analysis is another useful purpose to which industrial statistics can be put. Before opening a manufacturing or selling branch a firm can by study of the Bureau's figures determine the availability of labour, the amount of local competition which will be encountered in the proposed new territory. Again, producers must base future plans upon the absorptive capacity of the market and the number of articles apparently available to fill the consumer needs. Indeed, it was for this reason that in more than one branch of manufacturing the firms engaged therein have come to the Bureau of Statistics and have asked that production figures be gathered and published monthly in order that production schedules might more accurately be adjusted to meet changing conditions.

Trade associations not infrequently find that data from the Census of Industry aid them in the preparation of briefs to be presented to government departments, Royal Commissions, and similar organizations, in respect to tariff adjustments, transportation rates, price fixations and allied matters. In short, the Census of Industry is essential to the well being and advancement of those individuals and firms engaged in industrial operations.

MERCHANDISE EXPORTS, BY AREAS

QUARTERLY TOTALS

1946 - 1949

Current Economic Conditions

The index of production for the month of April, last, reached 187.2, which was at a peace time high. The corresponding figure for March of this year was 185.5 and for the same month a year ago 184.1. The previous peace time high was reached in December, 1948, when the index stood at 185.8. Increased production of durable goods was primarily responsible for the rise with the subindex for transportation equipment moving from 252.5 in March to 266.7 for April while that for motor vehicles moved from 189.3 to 212.9. In both these cases new highs since 1945 were reached.

The cost-of-living index showed a slight increase between April 1 and May 2 moving from 159.3 to 159.5. This was caused by the rise in the food index of a full point from 198.5 to 199.5 at which point it was 5.9 points below the October, 1948, mark of 205.4. Upward movement in the food index was in part, at least, offset by the decline in the fuel index which, owing to lower prices in Ontario and Quebec, dropped from 131.0 to 129.1. Fluctuations in the indexes of the other groups making up the cost-of-living index were within very narrow ranges.

The May monthly average of the weekly wholesale price index of industrial materials dropped rather sharply from that of April, last, the figures being 149.9 and 153.9 respectively. This drop in a wholesale price index may well reflect the indication of increased production referred to above. Wholesale prices for Canadian farm products moved slightly higher from 147.3 in April to 147.6 in May as compared with 150.4 in May, 1948.

Common stock prices as reflected in the weekly investors' index of common stock prices (1935-1939 = 100) showed continued weakness with the index dropping from 105.4 for April 28 to 103.1 for May 26. The monthly average of this index has now declined steadily since November, 1948, when it stood at 117.8. The high since this series was inaugurated was reached in June, 1948, when a mark of 120.3 was reached. Mining stock prices were also substantially lower in May with the composite index for 30 representative stocks dropping from 84.9 on April 28 to 80.4 for May 26. The drop

was particularly sharp in the base metal stocks which, reflecting recent severe cuts in metal prices, moved between April 28 and May 26 from 110.2 to 103.3. The monthly average of this weekly index number has now declined from a high of 128.6 reached in January, 1949, to 107.5 for May. The stock price index for 25 representative gold stocks moved within much narrower limits with the May average of the weekly figure standing at 69.4 down 2.9 points from the April mark of 72.3 but above the figures for the first three months of this year.

Civilian Labour Force

Canada's civilian labour force as of March 5, 1949, was estimated to total 4,899 thousand persons. This compares with 4,825 thousand on February 21, 1948, and 4,706 thousand on March 1, 1947. The civilian labour force is defined as the total number of persons over 14 years of age working or available for work for salaries, wages or profits. Since it is possible for persons attending schools, keeping house, or voluntarily not in the labour force to move in or out of it at will the figure constantly fluctuates, reaching the year's low point towards the end of winter and its high point at the end of summer. Unemployed numbered 199 thousand, seasonal influences being mainly responsible. This figure is approximately 4.1 per cent of the total labour force.

Labour income for the month of March, 1949, was \$605 million, unchanged from the February estimate. In September, 1948, it was \$664 million. This, however, included retroactive payments to railway systems employees amounting to \$31 million.

Commercial Failures

Commercial failures during January, 1949, totalled 97. Failures during February and March, last, were 93 and 80 respectively, thus giving a quarterly total of 270, the largest quarterly total since the first quarter of 1941 when failures numbered 294. Subsequent to the year 1941 failures in the first quarter of each year declined steadily until in 1946 only 54 were reported. Since that date the trend

HOURS WORKED AND HOURLY WAGES IN MANUFACTURING

AVERAGE WEEKLY HOURS WORKED IN MANUFACTURING SHOW A GRADUAL DECREASE

has been in the opposite direction with failures during the first quarter of 1947 totalling 120 while in the similar quarter of 1948 they numbered 203.

Failures were greater than in the first quarter of the previous year in all of the four main economic groups, the trade group leading with 93 failures. This was an increase of 26 or 44.9 per cent over the 1948 total of 67. The manufacturing group ranked next with 57 failures compared to 39 in the first quarter of 1948. Failures in the service group increased from 42 in the initial three months of 1948 to 51 during the same period of the current year. The miscellaneous group including construction and transport firms reported 48 failures as against 30 in the earlier year while failures unclassified as to industrial grouping were 21 as compared with 25.

Although an analysis of the liabilities of the defaulting firms reveals that they were greater than for the same periods for any year since 1936 it must be remembered that there has been a considerable rise in prices and values since that year. Thus, though the total of \$4,196 thousand for the first quarter of 1949 compares in absolute figures with \$4,484 thousand in the same period of 1936 on the basis of 1936 prices and values, the 1949 figures would be reduced very considerably.

April Foreign Trade

Canada's imports for consumption from all countries (excluding gold) were valued at \$242.7 million compared with \$235.9 million for the previous month and \$226.7 million for the same month of the previous year. The cumulative total of the value of imports for the first four months of this year was \$908.4 million compared with \$812.1 million in 1948, an increase from one year to the next of 11.9 per cent. In this connection it should be noted that during the earlier year there were severe restrictions against imports from the United States and other dollar countries which have been largely abolished or alleviated since the end of 1948.

Domestic exports to all countries were valued at \$237.8 million compared with \$216.8 million for March and \$212.3 million for April of 1948. The cumulative total of the value of exports of domestic products for the first four months of the current year was \$896.6 million while

the similar total for the first four months of the previous year was \$884.4 million. The increase of the 1949 figure over that of 1948 was \$12.2 million or 1.4 per cent.

From the above it will be seen that Canada's purchases of foreign goods exceeded exports of domestic products by \$4.9 million in April, 1949. However, during the month Canada re-exported foreign goods the value of which appears under "imports for consumption" but not under "domestic exports" to the amount of \$2.5 million. There was, therefore, a net adverse trade balance during the month of \$2.4 million. The comparative figures for the first four months of the current year were a gross adverse balance of \$11.8 million and a net, after making allowance for the re-export of foreign goods to the value of \$8.8 million, of \$3.0 million. For April, 1948, there was a net adverse balance of \$11.6 million and for the first four months of that year the balance was favourable to the amount of \$83.4 million.

Imports from the United Kingdom during April, last, were valued at \$30.1 million as compared with \$28.3 million for the previous month and \$24.6 million for April, 1948. The cumulative total for the first four months of this year was \$106.8 million and for the previous year it was \$85.7 million. Thus, it will be seen that from one year to the next imports from the United Kingdom increased by approximately 24.6 per cent.

Exports to the United Kingdom were valued at \$63.0 million as compared with \$39.5 million in March and \$44.4 million in April, 1948. The cumulative totals were \$202.5 million in 1949 and \$220.1 million in 1948. There was therefore a reduction in Canadian shipments to U.K. of about 8.0 per cent of the 1948 total.

As a result of the increase in British shipments to Canada and the reduction of our exports, the Canadian cumulative trade balance for the first four months of the year has been reduced from \$134.8 million in 1948 to \$96.6 million in 1949.

Approximately 60 per cent of Canada's total foreign trade in April, last, was in the form of exchange of goods with the United States. We imported goods to the value of \$177.3 million, or 73 per cent of the total imports, in April compared with \$169.0 million in March and \$159.5 million in April of last year. Exports

to the United States amounted to \$110.7 million or 46 per cent of the total exports in April, \$122.4 million in March and \$109.2 million in April, 1948. The cumulative adverse balance of trade for the first four months has increased from \$155.9 million in 1948 to \$197.9 million in the current year. As has already been pointed out, it is quite clear that the removal or lessening of restrictions on imports from dollar countries plus increased Canadian travel in the United States are undoubtedly largely responsible for this rising adverse trade balance.

Crop Conditions

The Bureau's estimate, as at June 21, of crop conditions in the west indicates improvement in many districts due to recent rains but there are still sections where rain is desperately needed to stave off very serious deterioration of the grain. Manitoba seems to be the most favoured since most areas report that conditions have improved to such an extent that in most cases the prospects for the crops are excellent. The recent rains have also kept the grasshopper menace in the infested areas to a minimum and have allowed spraying operations to be effectively carried out.

Rain in Eastern Saskatchewan has improved the outlook but rain is urgently required in the southwestern section to relieve the drought. The prospects in the central part of the province range from good to poor, and in the north conditions remain fair. The grasshopper plight is greater in Saskatchewan than in Manitoba, with greatest danger in the central portion of the province, and danger of it spreading to other sections.

Alberta reports extremely varied conditions. The southern portion of the province has improved due to rainfall of $\frac{1}{2}$ to 1 inch. In most other sections the conditions are not so favourable. The central section of the province reports the grain to be at a standstill for need of rain, especially in the west central area. Grasshopper danger is not as great as in Saskatchewan and the danger has been further reduced by spraying and other controls, but

there is still need for care in the most infested areas.

In all the provinces the amount of rain that has fallen since the first of April is still below the normal for this period. Alberta is suffering the most as the total to date is only 2.68 inches whereas the normal is 4.52 inches. Saskatchewan follows with 3.26 inches, the normal being 4.32 inches, while Manitoba with 4.43 inches, with a normal of 4.85 inches, is the least affected province.

Production of Metals

Gold production during the month of April amounted to 325,200 fine ounces, off seven per cent from the high figure for the year reached in March when production was 342,700 fine ounces. The April, 1949, figure was, however, about 14 per cent higher than in the same month last year when 286,100 fine ounces were produced. Production for the first four months of the year amounted to 1,284,500 fine ounces compared with 1,108,800 in the same period of the previous year.

April production by provinces and territories, with the figures for the same month last year in brackets, was as follows: Ontario 187,400 (172,400) fine ounces; Quebec 78,300 (64,100); British Columbia 24,600 (26,500); Northwest Territories 17,600 (7,000); Manitoba and Saskatchewan 17,400 (15,800); Yukon nil (91); and Nova Scotia nil (1).

Production of primary copper continued at the high rate established during the earlier months of the year with a total production of 22,400 tons in April. This is the largest monthly tonnage total recorded since January, 1944. During the first four months of this year production has totalled 86,800 tons as compared with 81,600 tons in the similar period of 1948.

Nickel output in April declined to 10,600 tons from 21,600 in the preceding month and 13,200 in the corresponding month last year. Cumulative output for the four months ended April was, however, slightly higher than in the same period last year standing at 45,300 tons as compared with 44,100 tons.

⁽¹⁾ As of June 1. ⁽²⁾ Exclusive of stillbirths. ⁽³⁾ Not applicable to figures on population. ⁽⁴⁾ Yukon and North-West Territories not included in figures for births, marriages and deaths.

Note.—Until the end of 1946, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1947 are preliminary but tabulated in the same way. Monthly figures for 1947 and 1948 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

(1) Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

Note: As of April 1949, Newfoundland is included.

(1) Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

(2) Totals include unspecified pulp.

⁽¹⁾ Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

⁽²⁾ Excluding producers' interchange.

⁽³⁾ Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

⁽⁴⁾ Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refining in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

Shipments of Primary Iron and Steel Shapes to Consuming Industries
 (Carbon and Alloy)

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

⁽¹⁾The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽¹⁾ Does not include Supplementary Government Payment made under Prairie Farm Assistance Act, Prairie Farm Income Act and Wheat Acreage Reduction Act.

⁽²⁾ Includes total adjustment payments made by grain companies on oats and barley delivered by western producers during the period August 1 to October 21, 1947. These payments are not available on a provincial or quarterly basis.

Grain Supply and Disposition

⁽¹⁾ Includes imports to the end of 1947-48 while in 1948-49 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

⁽²⁾ Figures of customs exports for 1945-46 and 1946-47 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. The statistics for 1947-48 are customs exports and will be adjusted when required information is available.

⁽³⁾ Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption.

⁽⁴⁾ Includes customs exports of Canadian oatmeal and rolled oats.

Inspected Slaughterings of Live Stock and Cold Storage Holdings of Meat and Poultry

⁽¹⁾ Available for January, April and August only. ⁽²⁾ Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date. ⁽³⁾ Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. ⁽⁴⁾ Prior to 1941 prices were quoted on a live weight basis. ⁽⁵⁾ Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W. ⁽⁶⁾ Subject to revision.

Exports of Live-Stock Products

(1) Does not include re-exports.

(2) This column has been revised to exclude ferro-alloys and iron ore. Exports of primary iron and steel now comprise pigs, ingots, blooms and billets, and rolling mill products.

(3) Other iron and steel has been revised to include iron ore.

⁽¹⁾Australia, New Zealand, South Africa, India and Pakistan.⁽²⁾Includes Belgium, China, Czechoslovakia, France, Netherlands, Netherlands Indies and Norway.

Source: Monthly Report; Imports for Consumption, Trade of Canada, D.B.S.

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada.

Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments".

(1) Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transactions,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

(2) Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board. *See footnote of page 106.
