The Canadian Balance of International Payments

Canadians in recent years have become increasingly conscious of the close relations which exist between their every-day lives and the conditions in the rest of the world. Canada's receipts of income from other countries normally amount to approximately one-third of the national income of Canada and to more than one-fourth of her national production and these exceptionally high ratios were greatly exceeded during the war years. Consequently fluctuations in Canada's external income and expenditures have particularly vital effects upon Canadian economic activity.

Furthermore Canadian indebtedness to other countries has represented a significantly high proportion of the total capital employed by the nation. This indebtedness has arisen mainly from a dependence upon imports of capital which existed in earlier periods of Canadian development. Even in the current period certain types of imports of capital continue to play an important part although they now represent a much smaller proportion of the total new investment than in earlier boom periods.

These two factors—the high dependence on international trade and the large measure of international indebtedness—make a thorough knowledge of Canada's balance of international payments of paramount importance to any person or group studying the country's economic position and resources.

The annual statement on the Canadian balance of international payments has as its object the exposition of all international transactions between residents of Canada and residents of other countries to the extent that these transactions enter into the exchange of goods or services or otherwise affect the international financial position of the country. The March, 1948, issue of the *Canadian Statistical Review* discussed in some detail the impact on the national economy of the country of the actual transactions which took place during the year 1947. The object of the present article is to discuss the general principles upon which the statement is based.

In order to distinguish between the current exchange of goods and services and changes in the capital account, the annual balance of payments statement is divided into two broad

sections: (a) the current account including unilateral transactions and (b) the capital account.

The Current Account

This generally covers international exchange of goods and services. Thus when the ownership of commodities is transferred from one country to another, usually by their export or import, this is entered in the merchandise item of the current account, with a credit entry for the dollar value of goods exported and a debit for those imported.

Similarly when transportation or other commercial services are rendered by one country to an other in the course of the exchange of commodities the dollar value of the service is entered under the appropriate item of the current account. This account also includes payments of income accruing to non-resident investors, expenditures of international tourists, the sale of non-monetary gold mined in Canada, and certain unilateral transactions of a current nature.

The unilateral transactions referred to above which are included in the current account differ in some important respects from the exchange of goods and services. They include international transfers in the form of gifts of money where no offsetting services are rendered, and gifts in kind where no international payments are made although the international ownership of commodities is changed. Examples of unilateral transactions in commodities are official and private gifts, such contributions of goods as Canadian Mutual Aid, contributions to UNRRA and post UNRRA donations. Unilateral transactions in cash include personal remittances, inheritances and migrants' funds. While such transactions do not now bulk largely in the total of Canadian current international transactions they have at times played a most important part and must, of course, be considered in obtaining a complete picture of international payments.

The Capital Account

The capital account generally includes transactions affecting Canada's international indebtedness position arising out of changes in the relationship between external assets and

liabilities. A net outflow of capital from Canada for example, accompanied by a current account surplus, is made up either of increases in Canadian owned assets abroad or reductions in Canadian liabilities to other countries. A net inflow of capital into Canada, on the other hand, will take the form either of a reduction in Canadian owned assets abroad or an increase in Canadian owed liabilities to other countries.

By presenting direct estimates of capital movements the capital account shows the way in which the change in the capital position has taken place and if all the statistics were complete and accurate would present a balance equal in amount but opposite in sign to the net balance on the current account.

There are certain changes in the international investment position, however, which are not reflected in the capital account of the Canadian balance of payments. Examples are: changes arising from re-investment of earnings, revaluations of assets or liabilities, changes resulting from migrations and inheritances where no cash remittances are involved, etc.

The capital account does cover specific capital transactions such as the purchase and sale of securities, redemptions, and loans and loan repayments. It also includes a variety of changes in cash balances and other forms of short term financial position. Changes in Canadian holdings of monetary gold are also included as these are considered part of the official U.S. dollar reserve held by Canada.

As a consequence of the factors entering into it the capital account in Canada's balance of international payments statement is a complex statement reflecting changes in numerous types of financial claims affecting various forms of assets and liabilities. Even those transactions which can be conveniently classified into the usual groups may represent a mixture of short and long term transactions subject to a variety of influences and motivating factors. Closely allied to the capital account in the balance of payments are the statements showing international investments and balance of international indebtedness usually published in conjunction with the main statement. These statements of investments are, for the most part, constructed from different sources, although the data on the movement of capital

shown in the capital account are employed in some part of the record of investments. The details of international investments are largely based on book values shown in the balance sheets of investing companies and many of the changes affecting these are not of the type which would be covered in the balance of payments statement. For example changes connected with the development or depletion of ore reserves of a mining company might radically affect the book value of non-resident investments although they would not usually affect the statement of capital movements in the balance of payments.

Distinctive Characteristics of the Canadian Statement

Canada has had current account surpluses consistently each year since 1934 indicating the basic strength of the Canadian balance of payments in recent decades. During this period current surpluses with the United Kingdom and with other overseas countries have exceeded the current deficits with the United States. But the size of these credit balances with all countries has fluctuated sharply during the period due mainly to changes in exports and imports.

External merchandise trade has been, and must in the foreseeable future continue to be, the most important element entering into the Canadian balance of international payments. Traditionally Canada has occupied a peculiar position in international trade, buying more from the United States than she sells to that country and selling more to the other countries overseas, particularly the United Kingdom, than she buys from them. This unbalance with individual countries and regions, sometimes called bilateral disequilibrium, has been widened in recent years by post-war trends in trade.

Under conditions existing before the war such an unbalanced position while it made for vulnerability, did not prevent the carrying out of multilateral settlements because of the free convertibility of currencies. As such conditions no longer prevail the bilateral features of Canada's international payments have taken on new importance as Canada's dollar position and ability to continue to import are closely related to the amount of receipts of convertible exchange from trade with overseas countries as well as the United States.

The bilateral disequilibrium reached a peak in 1947, a year in which the current account surplus with all countries was low. There was a rapid decline in Canada's official reserves of U.S. dollars in the same year as a large part of Canada's exports went to overseas countries which being financed by loans from Canada did not yield convertible exchange. Reductions have recently occurred in the disequilibrium and Canada's over all current surplus and official reserves have risen from the low level reached in 1947 following the introduction of the Emergency Exchange Conservation measures in the fall of that year and a reduction in drawings on Canadian loans and export credits to other countries.

The yearly receipts of foreign exchange or accretions to liquid reserves obtained from Canadian gold production are of great significance to Canada's U.S. dollar position. The Union of South Africa is the only other trading nation which enjoys this balance of payment advantage to any considerable extent although other British Commonwealth communities, notably Australia possess it in a lesser degree. Because of her contiguity to the United States and her natural advantages of scenery, Canada can also depend on obtaining on balance a considerable amount of U.S. dollar credit from the annual tourist trade. Again there have also been substantial receipts from overseas countries in recent years from freight and shipping transactions although these items continue to give rise to deficits in our accounts with the United States.

On the debit side the presence in Canada of large amounts of foreign capital makes necessary unusually large interest and dividend payments to non-residents. This item strikes with particular force since the vast majority of foreign investors in Canada are now resident in the United States and such payments aggravate an already one-sided balance in favour of that country. Exchanges of other services and personal remittances also lead to net payments by Canada to other countries. Payments to the United States are particularly large, there being a great variety of business and professional services obtained from that country.

Uses Made of These Statistics

Balance of payments data are needed whenever an analysis of external economic relations of the Canadian economy is required. Broad

uses arise in government departments concerned with financial policies and controls, commercial relations, re-adjustments of tariffs, taxation matters, etc. Likewise economists within the government or outside of it require data of this kind in analysing economic trends and attempting to project them into the future.

The predominance of the dollar problem in recent years and the various governmental measures taken to alleviate it have led to frequent consideration of balance of payment trends by all concerned with the national welfare and direction. Related to this type of use by senior officials and policy making groups is the growing demand for statistical information of the more detailed kind arising out of the establishment of research units in the different departments and agencies of the government.

The interest of governmental officials applies not only to the general data but also to sectors of the international accounts more specifically dealing with subjects of special departmental interest such as shipping, tourist expenditures, interest and dividend payments, etc. Some of these interests in the statistics are for administrative purposes rather than as guides to general economic policy. For example the Canadian Government Travel Bureau and some of the provincial tourist bureaus are interested in the statistics of international tourist expenditures as a basis for judging the effectiveness of promotion work and in studying trends in the trade.

Arising out of current international financial and economic problems is the need for close collaboration with other governments in the exchange of statistical information. This has been particularly noticeable in relations between the Canadian and United Kingdom governments. Then too the International Monetary Fund requires a substantial amount of balance of payment and other statistical information from its member countries.

Various agencies in the United States, both public and private, seek Canadian data for their economic research and publications. Investment interests with a stake in Canada follow closely Canadian balance of payment trends while statistics have to be filed in detail with the Securities and Exchange Commission when Canadian governments, either federal or provincial, float public issues of bonds in the United States.

NON-DURABLE GOODS MANUFACTURING

* 1949: Based on a ten-month average

Current Economic Conditions

As reports on economic developments during the closing months of 1949 are published there are indications that the level reached during the year just closed is comparable to that achieved during 1948. Conditions were more favourable than was generally anticipated during the earlier part of the year.

Estimated labour income for October stood at \$663 million. This was a higher figure than that recorded in any other month except August, 1948, when a similar mark was established. The latter, however, included \$31 million in retroactive wage payments to employees of the railway systems.

Even in the face of this large purchasing power put in the hands of Canadian employees the cost-of-living index continued to decline in recent months, slipping to 161.5 on December 1. The all time high was 162.8 touched in August of last year while the comparative figure for December, 1948, was 158.9.

The dollar volume of retail trading during the month of November last was \$661 million, up about two per cent over the \$650 million figure for the same month of 1948. Dollar sales were up approximately six per cent in the eleventh-month period of 1949 above those for the same period of the previous year. Of the total retail trade the amount handled by department stores totalled \$93 million, 3.8 per cent above the \$89 million reported for November, 1948. While retail trade in general showed an increase the sales of motor vehicles after reaching a new high in October fell sharply below the previous November's total with 18,823 units sold as compared with 22,345 units a year earlier.

In the financial field there was also evidence of increased activity. Cheques to the value of \$8,540 million passed through clearing houses during November, an advance of 6.5 per cent over the same month of the earlier year. This November total was exceeded only in November, 1945, a time when very heavy payments were being made on account of the ninth Victory Loan. The eleven month total value of cheques cashed was \$79,159 million, up 8.6 per cent

above the \$72,887 million for the same period of 1948.

Agriculture

During the third quarter of 1949 cash income from the sale of farm products as estimated by the Bureau of Statistics totalled \$730 million, an 11.8 per cent decrease from the \$827 million realized during the same period of 1948. This, however, was the first time that a decline, quarter to quarter, from 1948 was recorded. Despite this decline there would appear to have been little if any weakening in the purchasing power of the Canadian farmer since the January to September total income from the sale of farm products has been estimated at \$1,794 million, a 2.6 per cent increase over the figure for the similar period a year ago when such income was placed at \$1,749 million.

The maintenance of farm cash income at a level above that of a year ago is attributable in large measure to increased Canadian Wheat Board payments and substantial gains in returns from sales of wheat, coarse grains, tobacco, beef cattle and calves. The \$533 million received during the nine-month period from the sale of livestock was only slightly higher than the 1948 comparative figure of \$525 million with the increase due to the greater marketings of cattle and calves rather than to higher prices. A decline in the number of hogs marketed more than overcame an increase in the prices received.

The Bureau has also issued an advance preliminary estimate of the 1949 total income from the sale of farm products which places this figure at \$2,409 million, slightly below last year's total of \$2,445 million but considerably higher than the \$1,962 million reached in 1947. In connection with this advance estimate it should be pointed out that the Canadian Wheat Board took over the marketing of coarse grains raised in the Prairie provinces on August 1, 1949 and that the estimate includes only preliminary payments made to growers of these grains. Any supple-

mentary payments which may accrue in the future should properly be considered as applying to the 1949 cash income.

Industry

Mixed economic trends are reflected in the fluctuations of the Index of Production and of its principal components. The main index stood at 184.5 for November last, only slightly below the 185.6 mark for October and the 185.1 figure for November of 1948. However, there were fairly wide fluctuations by the components making up the main index. Thus the index for all manufacturing stood at 192.9 as compared with 193.9 for October and 197.2 for November of the earlier year with that for non-durable goods manufacturing rising to 183.5 for last November compared with 181.8 for October and 182.2 for November, 1948, while the index for durable goods manufacturing dropped to 209.0 from 214.6 in October and 223.0 a year earlier.

The major contributing factor in this rather sharp decline appears to have been the drop in the index covering motor vehicles production which stood at 148.5, down 70 points from the October figure and 50 points from the mark reached in November of the earlier year. This reduction in the index (1935-39 = 100) is reflected in the absolute number of units shipped during the month when 13,900 passengers cars, 5,754 trucks and 67 buses or a total of 19,721 units left the factories as compared with 26,794 in the same month of 1948. Total shipments for

the first eleven months of 1949 were 264,713 units compared with 236,873 in the same period of 1948 and 236,705 in 1947.

The index of production of non-ferrous metals and their products on the other hand moved slightly higher, standing at 213.6 for November as compared with 205.4 for October and 212.2 for November of a year ago. That for electric power production stood at 169.0 down from the October mark of 173.9 but above the 156.9 figure for November, 1948.

Mining

The mineral production of Canada reached a new high value of \$890 million in the year 1949 according to a *preliminary estimate* just completed by the Bureau of Statistics. This was 8.5 per cent above the \$820 million for the year 1948 which in turn was 27.2 per cent above the 1947 mark of \$645 million. Included in the 1949 data is that for the new province of Newfoundland; if this were disregarded the total would be \$26 million less and the increase over the previous year only 5.4 per cent.

The accompanying table shows for the ten minerals which had in 1948 and 1949 production values in excess of \$25 million, and which account for 84.4 per cent of the entire 1949 production. The 1948 and 1949 volumes of production and the rates of change from the former to the latter year are also shown together with the dollar values of the production and the rates of change of these values for the same years.

MINERAL PRODUCTION 1948 AND 1949
of items whose total dollar value is more than \$25 million.

	VOLUME (Thousands of units)			VALUE (Thousands of dollars)		
	1948	1949	Per cent change	1948	1949	Per cent change
METALS						
Gold (fine oz.)	3,530	4,104	+16.3	123,536	147,739	+19.5
Copper (lbs.)	481,463	527,236	+ 9.5	107,160	104,799	- 2.2
Nickel (lbs.)	263,479	256,656	- 2.6	86,904	99,082	+14.0
Zinc (lbs.)	468,327	577,745	+23.4	65,238	76,534	+17.3
Lead (lbs.)	334,502	315,335	- 5.7	60,344	49,823	-17.5
MINERAL FUELS						
Coal (tons)	18,450	19,275	+ 4.5	106,684	112,050	+ 5.3
Petroleum (bbls.)	12,287	22,220	+80.8	37,419	62,233	+66.3
OTHER NON-METALLIC MINERALS						
Asbestos (tons)	717	574	-19.9	42,231	38,680	- 8.4
Cement (bbls.)	14,127	16,009	+13.3	28,265	32,863	+16.3
Sand and Gravel (tons)	68,671	59,211	-13.8	30,630	27,375	-10.6

Metals were valued at \$539 million in 1949, an increase of 9.5 per cent from the \$488 million of the preceding year. The prices of the various base metals fluctuated widely during the year and the calculated averages were lower in most cases than last year. In comparison with the figures for the preceding year the tonnage of copper was up 9.5 per cent while the value was down 2.2 per cent; the quantity of zinc produced increased by 23.4 per cent but the value was only up 17.3 per cent; lead production decreased 5.7 per cent in tonnage and the value decreased 17.5 per cent. The change in the value of the Canadian dollar expressed in terms of that of the United States raised the price of gold from \$35.00 to \$38.50 per troy ounce and with the availability of more skilled labour the gold mining industry was able to increase its output in 1949, the amount recovered from all sources exceeding 4.1 million ounces worth \$147.7 million. It should be noted that the average price per ounce of Canadian gold produced in 1949 is taken to be \$36.00 per fine ounce. This is an average value calculated by using \$35.00 for eight and a half months and \$38.50 for three and a half months. Silver production was valued at \$12.6 million, about \$0.5 million above that of the previous year.

The value of mineral fuels reached \$184 million in 1949, exceeding by about 15 per cent the previous record figure of \$160 million established in the previous year. Coal production at 19.3 million tons was 4.5 per cent above last while the value increased 5.3 per cent. The rapid development of the newer Alberta oilfields at Leduc and Redwater was chiefly responsible for a 80.8 per cent increase in the volume of crude petroleum produced during the year just closed. Due to lower prices per barrel the value of the output was only 66.3 per cent above that of the previous year. The volume of natural gas, which is usually associated with crude petroleum, was up 28 per cent.

Industrial Minerals

Non-metallics, or industrial minerals, were valued at \$62.3 million compared with \$67.2 million in 1948. Due to labour disputes the production of asbestos declined to 573,610 tons valued at \$38.7 million from the record high of 716,769 tons worth \$42.2 million achieved in

1948. The gypsum industry maintained approximately the same level of production as in 1948 with slightly higher prices raising the value of the output from \$5.5 million to \$5.9 million. The value of salt produced was \$5.3 million, about 10 per cent higher than in the previous year. The fluorspar industry was given a substantial increase by the inclusion in last year's data of Newfoundland production. Output jumped from 11,340 tons to 50,688 tons while values increased from \$344,834 to \$1,073,840.

Reflecting the high level of activity in the construction industry, the output of cement reached an all time of 16 million barrels valued at \$33 million. Clay products, which include brick, tile, etc., made from Canadian clay, were valued at \$18 million. Lime production was over one million barrels valued at nearly \$11 million. There was an increased demand for stone with output of nearly 13 million tons valued at about \$19 million. As is usual most of the 59 million tons of sand and gravel produced was used in highway construction.

Ontario maintained its position as the leading mineral producing province with an output valued at over \$315 million, gold, nickel and copper being as usual the principal minerals produced in this province. Ontario's share of the total output was 35.4 per cent; this compares with 35.9 per cent in 1948, 38.7 per cent in 1947 and 38.1 per cent in 1946. Quebec ranked second with an output valued at \$164 million or 18.4 per cent of the total. Here again gold and copper are the chief minerals produced. British Columbia, an important producer of lead and zinc ranked third with 15.0 per cent of the total output and Alberta, based almost entirely on petroleum production, was fourth with 13 per cent of the Dominion's total output. No other provinces produced more than seven per cent of the total, this figure being reached by Nova Scotia where coal mining ranks as a basic industry.

The provinces of British Columbia and Manitoba reported declines in the gross value of mineral output from 1948. The first mentioned had production valued at \$133 million as compared with \$148 million for the year 1948 and the latter's 1949 output was worth \$24 million as compared with \$26 million for the previous year.

⁽¹⁾Not applicable to Column 5 "Average hourly earnings".⁽²⁾Annual data as of June 1 are adjusted to include certain remote parts of several provinces which are not covered in the quarterly surveys. Quarterly data as of November 8, 1947 and February 21, June 5, September 4, November 20, 1948, and March 5, June 4, August 20 and October 29, 1949.⁽³⁾Includes only those not at work and seeking work. ⁽⁴⁾Includes retroactive payments to railway employees.⁽⁵⁾Prior to 1945, figures shown are those relating to hourly earnings in one week in the month of highest employment (overtime included) reported by manufacturers to the annual Census of Industry. For period beginning in 1945, see table 12. ⁽⁶⁾Conversions are included with annual data only.⁽⁷⁾Includes Newfoundland as of April, 1949.^{*}Under revision.

⁽¹⁾ Personal income is given on an annual basis for months as well as for years.⁽²⁾ Includes army civilian supply exports from February 1947.⁽³⁾ Annual totals are averages of end of month figures.⁽⁴⁾ Standard and Poor's Corporation. The series currently used represents 416 stocks.⁽⁵⁾ Series revised to incorporate changes in classification and adjustment to bench mark levels. Revised data prior to August 1948 will be shown later.

⁽¹⁾ As of June 1. ⁽²⁾ Exclusive of stillbirths. ⁽³⁾ Not applicable to figures on population. ⁽⁴⁾ Yukon, North-West Territories and Newfoundland not included in figures for births, marriages and deaths.⁽⁵⁾ Newfoundland data are included as of June 1, 1949.

Note.—Until the end of 1947, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1948 are preliminary but tabulated in the same way. Monthly figures for 1947, 1948 and 1949 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

40

Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that Province is disregarded.

(1) Monthly data as of end of month while annual section is based on averages of month-end statistics.

(2) As of July 1949, due to changes in method of recording payments, the number of benefit payments (equivalent to the number of beneficiaries) in the week which includes the third Friday of the month, has been substituted for the number of persons receiving benefit in the month.

(3) Prior to 1944 data included deferred as well as current vacancies.

⁽¹⁾ Monthly figures for Saskatchewan include all the power produced by the Churchill River power plant. Annual data up to 1946 reflect the fact that most of this power is consumed at Flin Flon just across the provincial border in Manitoba. The information required to compensate for this flow of power is not available on a monthly basis.

Note: As of April 1949, Newfoundland is included.

(1) Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

(2) Totals include unspecified pulp.

⁽¹⁾Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.⁽²⁾Excluding producers' interchange.⁽³⁾Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.⁽⁴⁾Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

Shipments of Primary Iron and Steel Shapes to Consuming Industries

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

⁽¹⁾The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽¹⁾Figures cover the production of firms which normally account for 85 per cent of the total for Canada.⁽²⁾Since January, 1949, includes concrete chimney blocks. ⁽³⁾Prior to 1947 data on producers' sales were used to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjusting producers' sales for changes in inventories. ⁽⁴⁾Includes Newfoundland as of May 1949.

⁽¹⁾Includes Newfoundland as of May 1949.⁽²⁾Hollow blocks including fireproofing and load-bearing tile.⁽³⁾Planks and boards.⁽⁴⁾Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

⁽¹⁾ Includes imports to the end of 1948-49 while in 1949-50 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

⁽²⁾ Figures of customs exports from 1945-46 to 1948-49 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. ⁽³⁾ Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption. ⁽⁴⁾ Includes customs exports of Canadian oatmeal and rolled oats.

⁽¹⁾ Available for January, April and August only. 1948 and 1949 indexes are subject to revision.⁽²⁾ Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.⁽³⁾ Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.⁽⁴⁾ Prior to 1941 prices were quoted on a live weight basis.⁽⁵⁾ Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

Source: Monthly Report on Wholesale Sales, D.B.S.

*Statistics cover transactions reported by investment firms, stock exchanges and other security dealers in Canada. Not included are: new issues of Canadian securities floated abroad, redemptions of called or matured Canadian bonds owned abroad, and some transactions by other than the reporting agencies. Complete statistics regarding capital movements are included in the annual reports on the "Canadian Balance of International Payments". See page 97.

⁽¹⁾Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transaction,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

⁽²⁾Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board.

⁽³⁾Does not include proceeds of 100 million dollar loan floated by the Government of Canada in the United States in August 1949.

⁽¹⁾The annual statistics embrace all steam railways, while monthly data refer to railways with annual operating revenues of \$500,000 or over. ⁽²⁾Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities. ⁽³⁾For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling \$29,085,087, paid in September 1948, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scale.

Note: Newfoundland data are included as of April, 1949.

⁽¹⁾Prior to 1935, includes gold and coin and Dominion notes held by the banks in Canada and the deposits in the Central Gold Reserves not ear-marked against the issue of bank notes, and, since 1935, notes of, and deposits with, the Bank of Canada.

⁽²⁾In 1926, 1929 and 1933, includes only foreign currencies.
