# Canadian Banking Statistics

Each month the *Canadian Statistical Review* publishes four tables of banking statistics. These are (a) Table 54, to be found on pages 113 and 114 of the current issue, setting out the liabilities and assets of the Bank of Canada; (b) Table 55, pages 115, 116 and 117, presenting the assets and liabilities of the combined chartered banks; (c) Table 56, page 118, showing the total money supply and the forms under which it exists; and (d) Table 57, page 119, showing the dollar volume of cheques cashed in clearing house centres. The first table shows data as at the end of each month or year. The second and third show data at month-end and month-end averages for each year while the last of these tables gives monthly totals and yearly averages of monthly totals.

Before discussing in detail the material to be found in these tables and the uses to which it can be put it is necessary to differentiate very clearly between the functions and operations of the Bank of Canada and those of the chartered banks. In general it may be said that the publicly owned Bank of Canada serves as a central bank or "bankers' bank" as well as acting as banker and fiscal agent for the government. The chartered banks are privately owned instruments of commercial banking.

The prime duty of the Bank of Canada is well set out in the preamble to the act of incorporation which reads in part "... to regulate credit and currency in the best interests of the economic life of the nation... to mitigate... fluctuations in the general levels of production, trade, prices, and employment, so far as may be possible within the scope of monetary action, and generally to promote the economic and financial welfare of the Dominion".

The chartered banks are required to maintain a reserve of not less than five per cent of their deposit liabilities within Canada in the form of deposits with and notes of the Bank of Canada. Clearing house debits between chartered banks are balanced by checks drawn on this deposit. The Bank of Canada in no way competes with the chartered banks in commercial banking and does not accept deposits from private individuals or corporations.

The Bank of Canada acts as the principal, although not the only banker for the federal government and as its fiscal agent; it is also authorized to act, if so requested as the banker and fiscal agent of the provinces.

The commercial or chartered banks have four main functions: (1) to accept current or demand deposits from their customers and to make payments from these as ordered; (2) to make such loans to individuals and commercial organizations as they see fit; (3) to extend the other usual banking facilities to their customers and (4) to accept savings or notice deposits from persons or institutions desiring to maintain such accounts.

This last function is rather interesting since in nearly all other banking systems there is drawn a sharp cleavage between the operations of commercial banks and savings banks. In Canada, however, the bulk of savings accounts are held in the savings departments of the chartered banks and the funds so deposited are used in regular commercial transactions. The volume of savings deposits in provincial savings banks, credit unions, loan and trust companies and the two large savings banks in the Province of Quebec amounts only to about one-eighth of the volume carried by the chartered banks in savings or "notice" deposits.

## Links between Tables

Tables 54 (liabilities and assets of the Bank of Canada) and 55 (the combined statement of the chartered banks) are related by virtue of the fact that certain assets of the chartered banks, such as their cash reserves, are in turn liabilities of the Bank of Canada, the central bank. Table 56, showing money supply, is related to the first two tables owing to the fact that all the items which go to make up the money supply (with the relatively unimportant exception of coin) are liabilities either of the Bank of Canada or of the chartered banks.

Because of these links, changes which take place in any of the three tables may be reflected in changes in either or both of the other two. These tables do not, taken by themselves, indicate how or where changes originate;

they do not show which is cause and which is effect. However, if the reader is interested in a particular change, the tables do show what adjustments have been associated with it.

The final table of the series, cheques cashed in clearing house centres, is related to the active chartered bank deposits in money supply and government deposits with chartered banks.

In examining the liabilities and assets of the Bank of Canada, attention should be focussed on changes in its liabilities to the chartered banks — Bank of Canada notes held by the chartered banks and their deposits with the Bank of Canada — which comprise the chartered banks cash reserves. Now, since total assets equal total liabilities, it is obvious that any change in the chartered banks cash reserve must be accompanied by some other change or changes in the liabilities and assets of the Bank of Canada. Table 54 will show whether this change has been associated with an increase or decrease in the amount of Bank of Canada notes in the hands of the public, with a change in government deposits with the Bank of Canada, with the purchase or sale of securities by the Bank of Canada, or with other changes in the Bank of Canada statement. (The change in chartered banks cash reserve is, of course, equal to the net change in all of the other items in the Bank of Canada's assets and liabilities.)

Even if there is little or no variation in the cash reserves of the chartered banks, it does not follow that other important changes have not occurred, it simply means that they have offset one another. For example, an increase in Bank of Canada notes held by the public, which by itself would produce a fall in the cash reserves of the chartered banks, may be offset by the purchase of securities by the Bank of Canada.

### **Heading Definitions**

Most of the individual headings in the table of liabilities and assets of the Bank of Canada are self-explanatory. On the liability side "other deposits" are chiefly deposits payable in Canadian dollars owned by foreign central banks, and the savings banks in the Province of Quebec. "Notes in the hands of the public" refer to the total Bank of Canada note circulation less than portion held by the chartered

banks. "All other accounts" include capital paid up, rest funds, dividends payable, drafts issued, accrued profits (profits are transferred to the Dominion Government at the end of each year) and sundry other liabilities.

On the asset side it should be noted that gold holdings have been nil since May, 1940, when the Bank of Canada's minimum gold reserve requirement was suspended and all its gold and foreign exchange holdings, over and above its short term requirements and necessary working balances, were sold to the Foreign Exchange Control Board. Since that date, as mentioned above, the bank's own holding of foreign exchange has been confined to working balances, and any substantial amounts included under this heading of assets have consisted of exchange held for the account of clients and have been balanced by the contra liability item "Foreign currency liabilities". The heading "advances" refers to any Bank of Canada loans made to the Dominion or Provincial governments, the chartered banks and Quebec savings banks. The Bank of Canada also has power to discount certain types of bills for the chartered banks, and, therefore, a heading "bills discounted" is included in the table. "All other accounts" are mainly composed of "float" and bank premises. "Float" refers to the total value of cheques, which at any given time are in the process of being cleared, having been deposited by the receivers but not yet charged to the accounts on which they are drawn.

### **Chartered Banks' Statement**

Table 55 is simply a composite balance sheet of the ten Canadian chartered banks — The Bank of Montreal, The Bank of Nova Scotia, The Bank of Toronto, The Canadian Bank of Commerce, The Royal Bank of Canada, The Dominion Bank, Imperial Bank of Canada, Banque Canadienne Nationale, La Banque Provinciale du Canada, and Barclays Bank (Canada).

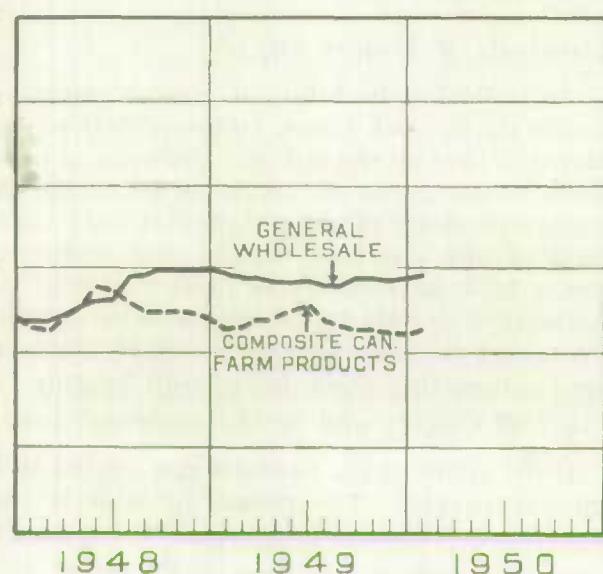

Section 59 of the Bank Act requires that the chartered banks maintain cash reserves of not less than five per cent of their total Canadian dollar deposit liabilities. In practice, however, the ratio of reserve to deposit liabilities is usually slightly in excess of ten per cent.

Deposits constitute by far the largest proportion of chartered bank liabilities. Here,

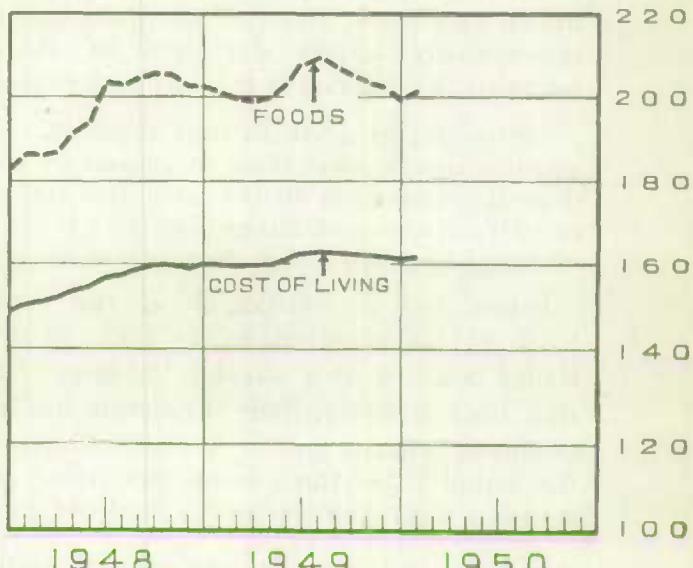

# PRICE INDEX GRAPHS

1948 - 1950

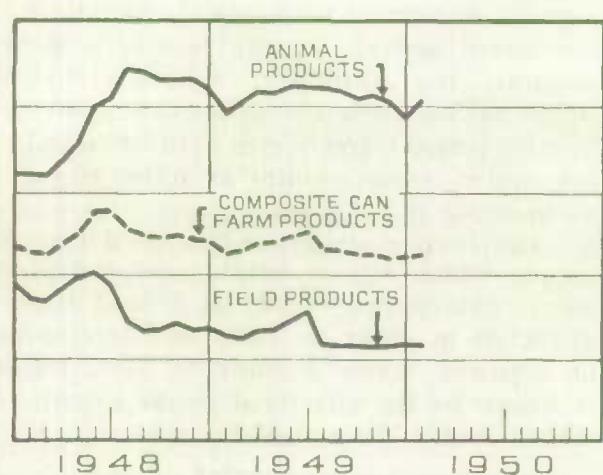

1926=100

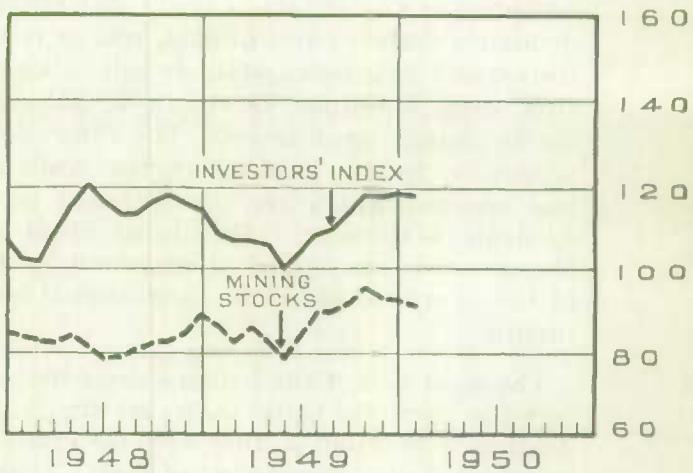

1935-39=100

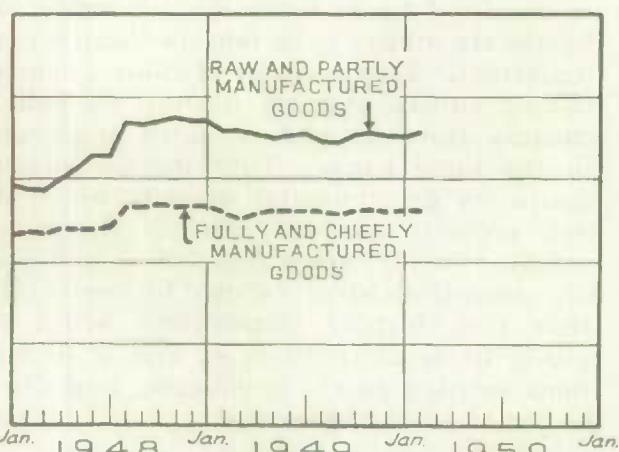

1926=100

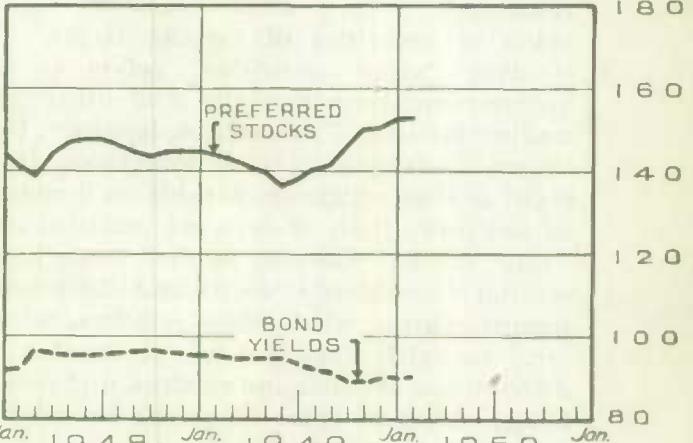

1935-39=100

1926=100

1935-39=100

again most of the headings in the table are self-explanatory. Demand deposits are the current accounts owned by individuals and businesses. These are very active since most commercial payments are made by cheques drawn on current accounts and daily business receipts are largely deposited in current accounts, no interest is paid on such deposits.

Notice deposits are savings deposits. The word notice is used since in respect of these deposits, chartered banks have the right to require notice of intention to withdraw although in practice they do not do so.

Before the establishment of the central bank in 1935, chartered banks' notes in circulation constituted a sizeable liability. Since that time, however, their circulation has been gradually reduced and in January of this year the liability for those notes remaining outstanding was taken over by the Bank of Canada.

In addition to deposits and note circulation, total liabilities as shown in the table include acceptances and letters of credit outstanding, dividends declared and unpaid, rest or reserve funds, and paid up capital. It will be noticed that total liabilities as shown in the table do not equal total assets. The difference is accounted for by balances in the profit and loss account which are not included in the monthly statement. Details of profit and loss accounts are published separately by each of the chartered banks in their annual statements.

The asset side of the balance sheet indicates how the chartered banks assets are distributed. As already mentioned, they keep cash on hand equal to about ten per cent of their Canadian deposit liabilities in cash reserves. Most of the remainder of their assets takes the form of loans or securities of varying terms. The heading "other securities" refers to non-government securities and the other items under "securities" are self-explanatory. Under "loans", advances to stock brokers and investment dealers which are payable on demand or in not more than 30 days are included under "call" loans. "Current public" loans include ordinary commercial loans and discounts to manufacturers, wholesalers, retailers, farmers, etc., for the financing of production and distribution of goods and services, and personal loans. Most of these loans are for relatively

short terms. A more detailed classification of chartered banks loans is published yearly in the *Canada Gazette* and in the *Canada Year Book*. The more important "all other assets" are bank premises and other real estate.

### *Analysis of Money Supply*

As indicated in table 56, money supply is made up of bank notes, coin and active bank deposits held by the public. The value of notes held by the public is calculated by taking the total circulation of notes of the Bank of Canada and of the chartered banks and deducting notes held as cash reserve by the latter. The value of coin held by the public is determined by taking the total coinage issued by the mint and subtracting the value of coin held by the Bank of Canada and by the chartered banks.

Only active bank deposits are included in money supply. The reason for this is that inactive deposits are not, in fact, being used as money although they are available for such use at any time in the future. All demand deposits or current accounts of the public are considered active. In the case of a savings account, the minimum quarterly balance which has been left untouched during a three-months period is considered as inactive and the remainder of the account as active and so to be included in the money supply. Dominion government deposits are not included in money supply which relates holdings of the public only. Finally the "float" as defined above is deducted in order to avoid double counting of deposits. The amount of such "float" is shown in the chartered banks month-end returns to the Minister of Finance.

Cheques cashed in clearing centres give an indication of how active the "active" deposits of chartered banks really are. However, the figures are subject to certain qualification and limitation. They exclude, of course, cheques cashed outside clearing centres, as well as cheques drawn on and deposited to accounts in the same bank. They include cheques drawn on governmental deposits which are not, properly speaking, part of the money supply. Finally, when regarded as indicators of economic activity, it should be remembered that they include transactions which are purely financial transfers as well as transactions relating to the production and distribution of goods and services.

# Statistical Trends

The index of industrial production followed its regular seasonal pattern and declined from 187.2 in December, 1949, to 184.5 for January of this year. The index for total manufactures declined from 197.0 in the former month to 193.4 in the latter with the subindex devoted to non-durable manufactures dropping from 182.2 to 174.7 and that for durable manufactures rising from 222.4 to 225.7. The decline in the non-durable index is, of course, a normal post-christmas development.

Freight car loadings for the week ending March 11 totalled 71,103 cars, very slightly below the 71,552 cars loaded in the previous week but 4.5 per cent below the total of 74,478 cars for the same week of the previous year. The cumulative total was 671,496 cars as compared with 724,542 cars for the same period of 1949 and 730,424 for 1948. Declines in the loadings of pulpwood in the eastern division and of grain in the western were the chief factors in these reductions in the number of cars loaded. Measured by the tonnage of revenue freight loaded there was a decline from 8,186 thousand tons loaded in February, 1949, to 7,573 thousand tons loaded in February of this year, a drop of 7.5 per cent. The cumulative total was 14,790 thousand tons for the first two months of this year as compared with 16,389 thousand tons for the same period of 1949.

## Prices and Price Indexes

Prices in 1949 generally averaged slightly above 1948 figures but the direction of change during 1949 was reversed by several of the price indexes compiled by the Bureau of Statistics. Prices had continued to rise during 1948, whereas 1949 saw a levelling off and, in some cases, an easing from post war peaks.

The preliminary 1949 general wholesale index of 157.0 averaged 2.3 per cent above the 1948 index and 21.6 per cent and 44.4 per cent higher than the 1947 and 1946 indexes respectively. However, during 1949, the monthly changes were narrowly lower, the index standing at 156.8 for December, 1949 as compared with 159.6 for December, 1948. Decreases in non-ferrous metals, animal products, vegetable oils, and

some chemicals accounted for the major part of the decline.

Canadian farm product prices at wholesale levels moved lower during 1949, with most price declines occurring in the second half of the year. The preliminary price average of 225.2 compared with 229.6 for 1948 (base 1935-39 = 100). Weakness was apparent in both field and animal products. Field products declined from 186.7 for December, 1948, to 179.8 for the same month of 1949, while animal products moved down from 280.4 to 259.9.

The price index of residential building materials exhibited the same trend as the general wholesale index, advancing 4.8 per cent between 1948 and 1949 but declining 1.2 per cent between December last and the same month of the year earlier.

The Dominion cost-of-living index increased 3.7 per cent between 1948 and 1949 as compared to 14.4 per cent between 1947 and 1948. However, in contrast to the wholesale index, the cost-of-living index moved higher during the year, advancing from 158.9 at December, 1948, to 161.5 at December, 1949. During the year the food index declined fractionally while increases in other sub-group indexes ranged from 0.5 per cent for home-furnishings and services to 4.7 per cent for fuel and lighting.

The investors' index for 106 common stocks recorded a small net decrease, the 1949 figure 109.4 comparing with the 112.5 for 1948. In the first half of 1949, prices declined to an index low of 99.6 in June but, thereafter, cumulative strength was recorded until by December, 1949, the level of 117.9 was reached. The monthly course of the mining stocks index paralleled that of the industrials and utilities, the composite index for this series moving down from 84.2 for December, 1948, to a 1949 low of 78.9 in June and, thereafter rising to reach 92.4 by the end of the year. The 1949 annual average of 87.4 compared with 82.0 in 1948.

## Finance

Cheques cashed against individual accounts for the first month of 1950 amounted to \$7,307

million. This is the largest amount ever cashed during January of any year and is 5.5 per cent above the \$6,928 million cashed in January of 1949.

The Maritimes, Quebec and Ontario had gains of 22.2 per cent, 10.2 per cent and 6.8 per cent respectively while the Prairie Provinces and British Columbia reported declines of 2.1 per cent and 6.9 per cent. It should be remembered that clearings in St. John's, NFD, are now included in returns for the Maritimes but were not so counted a year ago. Adjustment to allow for this reveals a Maritime decrease of 2.2 per cent.

A survey of reports from individual clearing house centres shows that 18 of the 34 in existence showed increased activity with that of the remainder falling somewhat below marks reached in January of last year. The largest single gain was reported from Edmonton where there was an advance of 22.1 per cent over the figures for the same month last year. This, of course, reflects the increased volume of business in the northern section of the Province of Alberta following the greatly increased oil output. Gains of 17.0 per cent, 14.6 per cent, 12.7 per cent, and 12.3 per cent were reported from London, Windsor, Regina, and Hamilton respectively. The smallest decline was reported from Sherbrooke where the volume of cheques cashed fell off 0.8 per cent while the largest drop in volume, 20.0 per cent, was recorded in Medecine Hat.

In the field of merchandising finance latest reports indicate a very high level of activity with a trend towards deferred payment plans making itself known. Comparison, quarter by quarter, of the first nine months of 1949 with the same period of 1948 reveals that while cash sales have been somewhat higher in the later year their percentage of the total volume of sales has decreased with installment sales increasing both absolutely and relatively and charge sales maintaining an identical ratio to the total volume with slightly increased sales volume.

An analysis of the third quarter sales for the last two years in the sixteen chief selling trades reveals that in all but one (women's clothing) a smaller proportion of business transacted was on a cash basis in 1949 than in 1948 while eight out of the ten trades that used an installment sales technique reported increased use

of it and in nine of the sixteen trades charge sales were proportionately higher in the later year.

## Labour

Influenced largely by seasonal conditions the index of employment as compiled from reports from firms and individuals employing more than 15 employees and engaged in operations in one or other of the eight leading industries declined to 194.2 (1926 = 100) at the beginning of January, 1950, down 3.8 per cent from the December figure of 201.8. The current figure also represents a decline of 1.6 per cent from the 196.0 mark established in January, 1949. The latter was the highest point ever reached by this index for the first month of the year.

A comparison December 1, 1949 to January 1, 1950 reveals that there were declines in employment in seven of the eight major industries with only trade running counter to the general trend. These declines were between 0.9 per cent for communications to 16.6 per cent for construction.

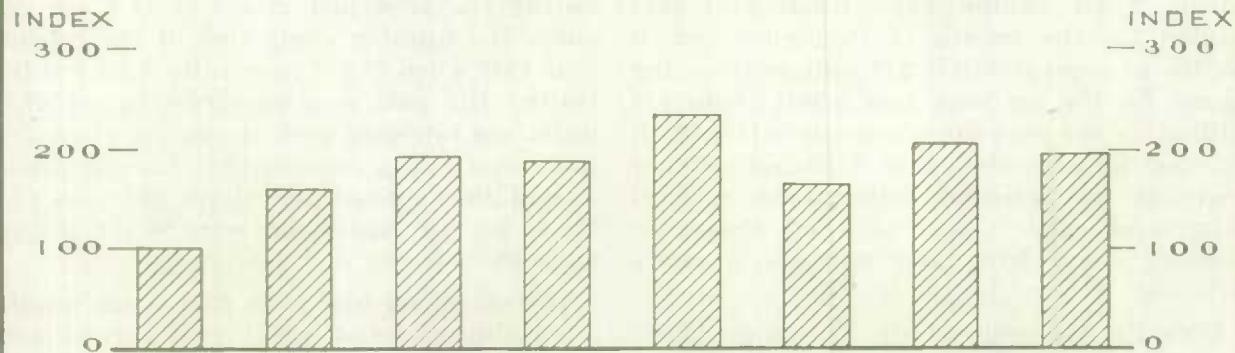

Four industries, mining, communications, construction, and trade reported higher employment at the beginning of 1950 than at the beginning of 1949 with the remainder, manufacturing, logging, transportation, and services reporting declines. A comparison between the first of the current year and the similar date of 1948 shows that manufacturing remained stable, logging and transportation declined and the other five showed gains for the more recent date.

The seasonal trend in unemployment is also reflected in the data on persons seeking unemployment insurance. During the month of January last such applicants numbered 196,624 (196,230 excluding Newfoundland) as compared with 150,480 (150,358 excluding Newfoundland) for December, 1949 and 140,305 for January of a year ago. The increase in new cases of recorded unemployment among insured persons between January 1949 and the same month of the current year was thus almost 43 per cent.

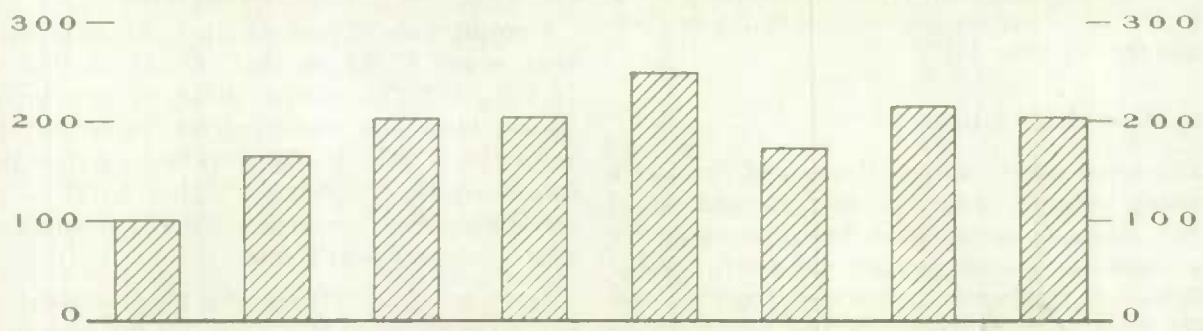

The number of ordinary claims on the live unemployment register on the last working day of the month provides a good indication of the volume of unemployment among insured persons at that particular time. This figure for January 31, 1950 stood at 296,992 as com-

## RETAIL CONSUMER CREDIT (BY QUARTERS)

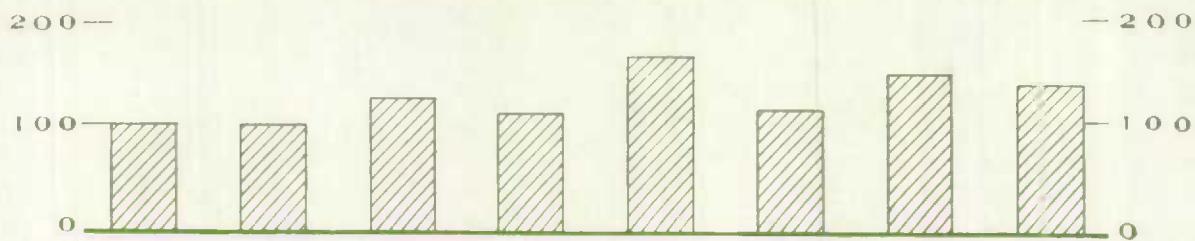

WHILE TOTAL SALES HAVE SHOWED INCREASE

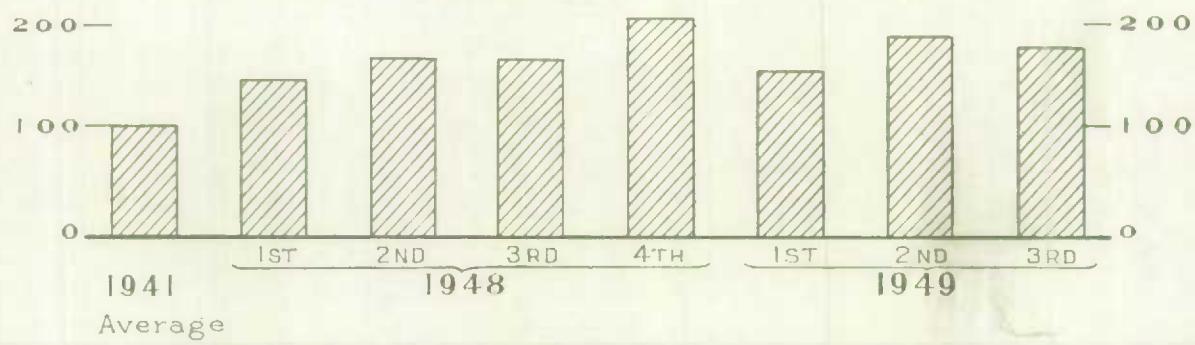

THE CASH SALES HAVE BEEN RELATIVELY STABLE

WHEREAS CHARGE SALES

AND INSTALLMENT SALES HAVE ADVANCED

pared with 197,676 for the same date in the year 1949, an increase of 50.0 per cent between the two dates.

With the number of persons employed having declined from November 1, 1949 the estimate of labour income for Canadian workers has also fallen. Such income was estimated at \$642 million for the month of December last, a decline of approximately \$19 million from the figures for the previous month but about \$28 million, or five per cent, above the \$614 million recorded for December, 1948. This decline from November to December followed the general pattern of other years, with all industries showing losses from the previous month's estimate.

With the inclusion of the December figure the estimate of labour income for the calendar year 1949 has been set at \$7,630 million, seven per cent above the estimated \$7,113 million for 1948 and 22.17 per cent above the \$6,216 million figure for the year 1947.

### New Dwelling Units

The most recent of the Bureau of Statistics housing surveys indicates that an additional 90,955 dwelling units have been provided for the Canadian people during the year. 87,533 of these are the result of new construction and 3,422 have been provided by the reconversion of already existing buildings. A "dwelling unit" for the purposes of the survey is defined as the

living quarters normally occupied by one household or family. Thus the number of dwelling units in any one structure is the number of separate households it is designed to accommodate.

The 87,533 new dwelling units completed during the year just closed is 15.0 per cent above the number completed in the calendar year 1948 when 76,097 new units were finished. During the past year construction on 89,509 units was initiated with the excess of completions over starts representing the completion of buildings started during the previous year. Starts for the earlier year were 90,194, slightly more than in the year just closed.

The carry over into 1950, that is the number of dwelling units on which work was initiated but not completed during the previous year amounted to 58,169 as compared with a 1948 carry over into 1949 of 56,456 units.

Completions of new dwelling units in earlier year were: 47,767 in 1945, 67,315 in 1946 and 79,359 in 1947. Since these figures include conversions the comparative total for 1948 would be 81,243. It will thus be seen that there has been an irregularly higher total of new dwelling units constructed in each successive year since the war's end.

It is estimated from the type of dwellings being constructed that about 74 per cent of the 1949 total were built for owner occupancy and the remainder for rental purposes.

## Selected Economic Indicators

<sup>(1)</sup>Not applicable to Column 5 "Average hourly earnings".<sup>(2)</sup>Annual data as of June 1 are adjusted to include certain remote parts of several provinces which are not covered in the quarterly surveys. Quarterly data as of February 21, June 5, September 4, November 20, 1948, and March 5, June 4, August 20 and October 29, 1949.<sup>(3)</sup>Includes only those not at work and seeking work. <sup>(4)</sup>Includes retroactive payments to railway employees.<sup>(5)</sup>Prior to 1945, figures shown are those relating to hourly earnings in one week in the month of highest employment (overtime included) reported by manufacturers to the annual Census of Industry. For period beginning in 1945, see table 12. <sup>(6)</sup>Conversions are included with annual data only.<sup>(7)</sup>Includes Newfoundland as of April, 1949.<sup>\*</sup>Under revision.

<sup>(1)</sup> Personal income is given on an annual basis for months as well as for years.<sup>(2)</sup> Includes army civilian supply exports from February 1947.<sup>(3)</sup> Annual totals are averages of end of month figures.<sup>(4)</sup> Standard and Poor's Corporation. The series currently used represents 416 stocks.<sup>(5)</sup> Series revised to incorporate changes in classification and adjustment to bench mark levels. Revised data prior to August 1948 will be shown later.

<sup>(1)</sup>Estimates are given by years as of June 1, and in Canada as a whole, commencing with the third quarter of 1949, as of the first day of the last month of each quarter.

<sup>(2)</sup>Exclusive of stillbirths. <sup>(3)</sup>Not applicable to figures on population.

<sup>(4)</sup>Yukon, North-West Territories and Newfoundland not included in figures for births, marriages and deaths.

<sup>(5)</sup>Newfoundland data are included as of June 1, 1949.

Note.—Until the end of 1947, annual and monthly data for births, deaths and marriages are based on total final figures which are tabulated by month of occurrence on the basis of residence. The annual figures for 1948 are preliminary but tabulated in the same way. Monthly figures for 1947, 1948 and 1949 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that Province is disregarded.

<sup>(1)</sup>Monthly data as of end of month while annual section is based on averages of month-end statistics.

<sup>(2)</sup>As of July 1949, due to changes in method of recording payments, the number of benefit payments (equivalent to the number of beneficiaries) in the week which includes the third Friday of the month, has been substituted for the number of persons receiving benefit in the month.

<sup>(3)</sup>Prior to 1944 data included deferred as well as current vacancies.

Note: These figures have been revised in order that all industries and industry groups may coincide with the Standard Industrial Classification. In many cases, individual firms have been changed from one industry to another, corresponding with the new definitions of industries. For more detail on types of firms included together with revised monthly figures for 1948, see the December "Report on Inventories and Shipments by Manufacturing Industries."

(1) Estimated inventories for all industries and inventories and shipments for selected industries.

Note: As of April 1949, Newfoundland is included.

(1) Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

(2) Totals include unspecified pulp.

<sup>(1)</sup> Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

<sup>(2)</sup> Excluding producers' interchange.

<sup>(3)</sup> Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.

<sup>(4)</sup> Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refining in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

<sup>(1)</sup>The coverage was extended to 507 municipalities in 1948, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>(1)</sup>Figures cover the production of firms which normally account for 85 per cent of the total for Canada.<sup>(2)</sup>Since January, 1949, includes concrete chimney blocks. <sup>(3)</sup>Prior to 1947 data on producers' sales were used to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjusting producers' sales for changes in inventories. <sup>(4)</sup>Includes Newfoundland as of May 1949.

<sup>(1)</sup>Includes Newfoundland as of May 1949.<sup>(2)</sup>Hollow blocks including fireproofing and load-bearing tile.<sup>(3)</sup>Planks and boards.<sup>(4)</sup>Prior to 1946 figures represent gross value of production. Figures for 1946 to 1948 are factory sales of firms which normally account for 96% of total Canadian production.

<sup>(1)</sup>Includes imports to the end of 1948-49 while in 1949-50 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.<sup>(2)</sup>Figures of customs exports from 1945-46 to 1948-49 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. <sup>(3)</sup>Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption. <sup>(4)</sup>Includes customs exports of Canadian oatmeal and rolled oats.

<sup>(1)</sup> Available for January, April and August only. 1948 and 1949 indexes are subject to revision.<sup>(2)</sup> Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.<sup>(3)</sup> Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.<sup>(4)</sup> Prior to 1941 prices were quoted on a live weight basis.<sup>(5)</sup> Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

## Exports of Live-Stock Products

<sup>(1)</sup>Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transaction,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

<sup>(2)</sup>Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board.

<sup>(3)</sup>Does not include proceeds of 100 million dollar loan floated by the Government of Canada in the United States in August 1949.

\*See footnote of page 96.

<sup>(1)</sup>The annual statistics embrace all steam railways, while monthly data refer to railways with annual operating revenues of \$500,000 or over. <sup>(2)</sup>Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities. <sup>(3)</sup>For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling \$29,085,087, paid in September 1948, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scale.

Note: Newfoundland data are included as of April, 1949.

<sup>(1)</sup>Prior to 1935, includes gold and coin and Dominion notes held by the banks in Canada and the deposits in the Central Gold Reserves not ear-marked against the issue of bank notes, and, since 1935, notes of, and deposits with, the Bank of Canada.

<sup>(2)</sup>In 1926, 1929 and 1933, includes only foreign currencies.
