# Forecasting Private and Public Investment

Estimates of the amount of money likely to be spent in the year ahead on construction and machinery and equipment have been published since 1946. The first publication was called "Capital, Repair and Maintenance Expenditures of Business Enterprises in Canada" and the second, which was released in 1947 was called the "Forecast of 1947 Investment by Canadian Business". In these first two years business or private investment only was covered in the forecast. In 1948 the title was changed to "Private and Public Investment in Canada, Outlook 1948". In March of that year for the first time statistics were published on government or public, as well as private expenditures. The reports for 1949 and 1950 have retained the same title.

The work on the investment forecasts was initiated in the Economic Research Branch of the Department of Reconstruction and Supply with the actual surveys being undertaken by the Dominion Bureau of Statistics and the

preparation of the text and final report by the Economic Research Branch. This arrangement continued through 1949 by which time the Economic Research Branch of the Department of Reconstruction and Supply had been attached to the Department of Trade and Commerce. In 1950 primary responsibility for the investment forecast was transferred to the Dominion Bureau of Statistics.

## *The Purpose of the Investment Forecast*

The amount of money spent on new construction and machinery and equipment is one of the more important determinants of the levels of income and employment in Canada as a whole. It is, of course, not the only determinant of these levels. Exports, consumer and government expenditures, and investment in inventories likewise create income and employment. All these components must be given close attention by any person or group

## INDEXES OF PRIVATE AND PUBLIC INVESTMENT AND GROSS NATIONAL EXPENDITURE

1939 = 100

concerned with the interpretation of current or foreseeable economic trends.

There are, however, a number of reasons for giving special attention to the levels of public and private investment in construction and machinery and equipment. One of the most important is the extent to which outlays of this nature have varied in the past, tending to accentuate the business booms and depressions. (See Chart on previous page).

Considerable thought has been given in recent years to the possibility of partially offsetting the variations in the private sector through more rigid control of government capital outlays. There are, of course, serious obstacles to implementing such a policy, particularly when business is on the up-swing and heavy expenditures for plant, equipment and housing necessitate government outlays for schools, hospitals, administrative buildings, roads, sewers and sidewalks, etc. On the other hand, when private investment is declining it is reasonable to expect that a contribution towards maintaining total investment levels and business activity generally might be made through increased capital outlays by the public or government sector. Implementation of measures such as this to counteract declines in employment and income require advance planning and consequently it is essential to have advance knowledge of intended investment on which judgments may be based.

Another important reason for collecting information on investment intentions is that such data reflect to a considerable degree the outlook of management on future business prospects. In planning new investment, especially durable investments like new factories or machines, management tries to estimate the probable returns over the years ahead. This it does by taking account of export prospects, home consumption, costs, taxes, and all the other conditions that affect present and prospective profits, and that therefore determine whether a given piece of new investment is likely to be worthwhile. Since it is much more difficult to gauge business conditions for a number of years ahead than for the near future, it seems highly probable that decisions to invest are based largely on profits in the immediate past, on current conditions and on the short-run outlook. Information of this type, regarding the future, is extremely valuable to both

business and government in planning effective measures to meet the conditions which may arise. Construction companies and suppliers of machinery and equipment receive a general indication of the volume of business they may expect and are able to plan accordingly. Governments, being better informed of the plans and expectations of business, are able to take this into account in policy formulation.

### *The Type of Expenditures Given in the Investment Reports*

Broadly speaking, the expenditures given in the investment outlook are those made for the purchase and repair of structures and machinery and equipment used either to produce goods or to provide services—in essence, the expenditures made on the tools required for production.

The nature of the tools or facilities for which these expenditures are made varies from one sector of the economy to another. In the manufacturing industry they cover the costs of purchasing and installing machinery and equipment and the construction costs of essential buildings. Storage space, workmen's tools, steam shovels and cranes represent some of the main expenditures of the construction industry. Typical government expenditures consist of the building costs of post offices and other government buildings, office furniture and machinery, and the costs of facilities like roads and highways, sidewalks, filtration plants, water systems, wharves and bridges. Expenditures of institutions are made up of the costs of building and equipment normally used by our hospitals, schools, universities and churches. In the mining industry such outlays include all development costs as well as the cost of machinery and equipment.

Housing is also included, although a large part of it is not business capital. Nevertheless it forms a large proportion of construction expenditures and has cyclical fluctuations similar to those which characterize business, institutional and government capital expenditures.

Although both capital and repair and maintenance expenditures are asked for in the surveys on which the investment outlook is based, the main emphasis of the report is on capital or new investment. Repair and main-

tenance outlays are properly considered as current and not capital charges and consequently are given separately. They are included in the investment reports principally because of their similarity in some respects to capital expenditures and also because they draw on virtually the same pool of labour and materials. Normally they do not fluctuate to the same extent nor are they as representative of the business outlook.

Capital expenditures are defined to include the cost of procuring, constructing and installing new durable plant and machinery, whether for replacement of worn out or obsolete assets or as additions to existing assets. Included are purchases from persons outside the business, together with the value of work on capital assets undertaken by business with its own working force. Gross outlay is asked for on the questionnaires used with no deduction for scrap or trade-in value of old assets. Excluded are expenditures made for the purchase of previously existing buildings and other structures, for used machinery and equipment, and for land, since outlay of this type involves only the transfer of property and not the production of a capital asset.

Repair and maintenance expenditures represent the outlay made to maintain the existing stock of durable physical assets in a normal state of repair.

Capital expenditures and repair and maintenance expenditures are each divided into construction and machinery and equipment. Construction expenditures include engineering, as well as building construction. For example, in the utilities, construction is largely engineering construction, such as that on transmission, communication and oil pipe lines, railway road beds, dams and bridges. Government construction figures include expenditures on highways, sewers, airfields, sidewalks, and other miscellaneous engineering construction.

### Coverage

All segments of the economy are covered in the Investment Reports. The largest portion of the expenditures are estimated from surveys of some 18,000 business establishments of all kinds, including mines, manufacturing plants, utilities, retail stores, banks, wholesale establishments, etc. Surveys are also made of

housing, institutions and governments. The remaining portions of the total capital expenditure estimate, covering agriculture and the primary part of the fishing industry, independent stores, real estate operators, and some of the commercial services group, are not derived from direct surveys and can only be considered as informed approximations. However, such estimates account for only about 15 per cent of the total given in the investment outlook.

### Quality of Estimates

In considering the accuracy or correctness of any analysis of investment intentions, two separate factors should be kept in mind. First, it is necessary to consider the extent to which investment plans are formulated in advance. Second, consideration ought to be given to the comparison of anticipated investment expenditures with the actual investment statistics once they are available for the period in question.

So far as the first point is concerned, it should be noted that it is not always easy to obtain reliable data on the future plans of business firms. Some firms do not decide upon their complete investment programme at the beginning of the year and are unable to state their intentions precisely. Generally, however, capital expenditures, particularly those on structures and large installations need previous planning and preparation and most firms are able to give a good estimate of expected outlay. In addition, the seasonal character of construction in Canada frequently means that early decisions must be made regarding the year's plans.

The extent to which the forecast is borne out in fact, though a measure of its practical worth, is not necessarily a good test of the ability of individuals to state their intentions. The plans of business may be frustrated or changed for many reasons. Modifications of the general business outlook, changing price trends, and shortages of some materials and skilled labour may result in postponement or other changes in investment plans. Individual businesses have different planning periods and in some cases plans are kept flexible as a matter of policy. There is a possibility, however, that there is a characteristic upward or downward bias in the forecast of certain individual firms. Changing circumstances from year to year

make it difficult to ascertain whether or not this results in any general bias toward understatement or overstatement.

It is of interest to see how accurately the 1949 investment programme was predicted early in that year. This is illustrated in the table below, based on Table 36, p. 46 of The 1950 Outlook. It appears that the overall total of actual expenditures in 1949 was 3.4 per cent higher than forecast. Within this total, business expenditures were about 4 per cent above the forecast, and other expenditures about 3 per cent above. All the components of the business groups showed some deviation from the original forecast. In primary industries, mining expenditures were found to have been moderately underestimated. Manufacturing expenditures were slightly lower than forecast. The utilities group exceeded the forecast main-

ly because progress in electric power development was greater than anticipated. In other expenditures, housing accounted for the largest part of the 3 per cent excess. Government work also went forward more rapidly than anticipated. A reduction in hospital expenditures accounted for most of the overestimate in the institutions group. It may have been that the forecast in some instances anticipated funds or appropriations which were not forthcoming later in the year.

In considering these comparisons, it should be kept in mind that the 1949 preliminary actual figures are still subject to further revision as more information becomes available. However, these revisions do not as a rule affect the overall totals appreciably although there are sometimes significant changes within groups.

## COMPARISON OF 1949 FORECAST WITH 1949 REALIZATION<sup>(1)</sup>

### CAPITAL EXPENDITURES

# Current Economic Conditions

Recent economic indicators show that there has been little change in the general high level of activity as reported in last month's Canadian Statistical Review. Industrial production continued at a high level in June with the index showing an advance of 2 per cent over the previous month and 5.6 per cent over June 1949. Total value of retail trade increased by 7.9 per cent over June of last year and was 5.3 per cent higher than the previous month. Department store sales for the four weeks ending August 12 have averaged 14 per cent above the same weekly periods of last year. Labour income in May was 2.7 per cent higher than the April estimate of \$642 million, and 6 per cent above May 1949.

A preliminary statement of our foreign trade for June reveals a continuation of the change in direction of trade relative to last year. Exports to the United Kingdom and Commonwealth countries declined by 21 per cent, compared with June 1949, while exports to the United States increased by 56 per cent. On the other hand, imports from the United Kingdom and Commonwealth countries increased by 30 per cent. Imports from the United States increased by approximately 7 per cent.

Attention is focused at present on the possible implications for the Canadian economy of heavy rearmament in the United States and the United Kingdom, and of our own increased defence programme and military commitments as a member of the United Nations and under the Atlantic Pact. In the United States, an increase in the defence budget of \$14.5 billion has been recommended, and President Truman has asked for authority to establish priorities for defence plants, insure the allocation and requisition of scarce materials, curb consumer credit, and increase taxes. It has been indicated by United States' officials that defence orders will be placed in Canada, but the extent of these is not yet known.

It may be some time before these developments are fully reflected in the statistical data. However, in recent weeks the price of many commodities has advanced sharply.

At the time of writing, the country is faced with a nation-wide railway strike which, if continued, will bring about severe economic dislocation. Industrial shutdowns have already commenced and serious agricultural losses may be sustained on perishable fruit and vegetable crops now coming on the market.

## Commodity Prices

The immediate effects of the Korean war are, of course, being felt in a rise in commodity prices both in the country and in the United States. These increases come at a time when the Canadian wholesale price index has shown a steady advance since the beginning of the year. Between May and June, the index advanced by approximately 2 per cent to 165.0 (1926=100). Substantial increases were registered for zinc and its products, and for brass, copper and products, which rose by 20.4 per cent and 11.9 per cent respectively. Raw wool advanced 11.3 per cent, live stock 7.5 per cent, fresh meat 6.7 per cent, lumber and timber 6.1 per cent and scrap iron and steel 6.1 per cent. These advances are for the month ending June 15, and do not reflect increases which have taken place since hostilities commenced in Korea on June 25.

In the seven weeks between June 22 and August 10, further substantial increases were registered in the price of many basic commodities. Official indexes covering this period are not yet available, but an analysis of prices of selected commodities indicates that a sharp upward movement has taken place and that the group of imported commodities has registered the largest gains. In the seven weeks for which figures are available, raw natural rubber advanced by 77 per cent to 55 cents per lb. and tin ingots advanced by 34 per cent to \$1.16 per lb. Imported vegetable oils rose sharply—peanut oil, by 46 per cent and coconut oil by 24 per cent. Other substantial advances were: raw cotton, 11 per cent; raw sugar, 7 per cent; and raw wool, 7 per cent.

Domestic commodities too have shared in the general advance. Lard increased by 67 per cent, tallow by 55 per cent and soya bean

## EXPORTS OF LIVE CATTLE AND COLD STORAGE HOLDINGS OF BEEF IN CANADA

## PRICES OF STEERS AT TORONTO AND CHICAGO STOCKYARDS

\* Description revised

Source of U.S. data: U.S. Bureau of Labour Statistics.

oil by 12 per cent. Steers increased by 5 per cent and hides by 17 per cent.

These increases reflect something more than the normal pressure of demand resulting from a high domestic level of industrial activity and consumption. The Korean war and consequent fear of shortages has introduced a speculative element into the situation.

### Stock Market Prices

Stock market prices, too, have reacted sharply to the outbreak of war in Korea. Weekly stock price indexes (1935-39 = 100) indicate that the stock market was fairly stable during the first quarter of 1950, but that a general rise in prices began to make itself felt in the second quarter of the year for all groups except golds.

During the week ending June 29, the week in which hostilities commenced in Korea, all groups declined sharply. This downward movement continued until the third week in July, when a general recovery began to take place. Between June 22 and July 13, the weekly index of industrial stocks declined from 129.4 to 114.0; utilities dropped from 139.0 to 122.9; banks, from 150.5 to 144.4; golds from 71.5 to 54.8; and base metals from 134.4 to 120.3.

Up to August 17, only industrials and base metals had recovered to a point exceeding their June 22 levels. The indexes for these two groups were 133.5 and 138.3 on that date. All other groups had shown a fairly steady increase, with the exception of golds which stood at 60.2 on August 17 as compared with 60.0 on July 20. The weekly indexes for utilities and banks on August 17 were 134.9 and 146.3, respectively.

### Beef Situation

Exports to the United States of dressed beef and veal were 25 per cent higher during the first six months of 1950 than for the same period a year ago. Average monthly cold storage holdings of beef in Canada have declined from 27.8 million pounds in the first six months of 1949 to 15.9 million pounds in 1950, or by 43 per cent. Exports of live cattle to all countries in the first six months of the year were 61 per cent above the same period a year ago. The decline in cold storage holdings of beef in Canada and the increase in exports

of live cattle is illustrated graphically in the chart on page vi.

These figures reflect the present heavy demand for Canadian beef which has resulted in higher prices. Since January 1947 steer prices in Canada have approximately doubled. The chart on page vi shows how the price of steers in Canada has moved in relation to the American price. It is interesting to note that in 1947 American steer prices were very nearly double Canadian prices, but that early in 1948, the Canadian price began to climb rapidly as farmers restricted marketings in anticipation of the removal of the embargo on exports of beef and cattle to the United States. Toward the end of 1948 and early in 1949, the American price dropped sharply as the effects of the recession began to be felt in that country. Despite this sharp decline, however, the United States price remained well above the Canadian price, which dropped much less severely. Since the beginning of 1950 Canadian steer prices have risen steadily, even though prices across the border showed a substantial decline during the first quarter of the year.

According to an analysis by the Department of Agriculture,<sup>(1)</sup> these high prices are likely to prevail for some time. There are some indications that excessively heavy marketings of heifer stock in 1950 may result in an impairment of Canada's productive capacity. In addition it is stated that the cattle population in Canada has been declining during the past few years and that production, after an initial lag, may also decline. There is therefore little hope of an improvement in the supply of beef in Canada in the near future.

### The Cost-of-Living in June

The Canadian cost-of-living index advanced a further 2.1 points between June 1 and July 3 to a new high of 167.5. As noted above this figure does not, for the most part, reflect price increases which have taken place as a result of the international situation. Higher food prices accounted for most of the increase but rents were also a contributing factor. The food subindex rose sharply from 209.0 to 214.3, largely as a result of increases in meat, eggs, and potatoes. A considerable portion of the

<sup>(1)</sup> The Current Review of Agricultural Conditions in Canada, Department of Agriculture, June, 1950.

price rise in these items was seasonal, particularly in eggs, which advanced 10.4c per dozen and potatoes which rose 8.6c per 10 pounds.

### August Crop Estimates

Canada's wheat crop was forecast at 544 million bushels in the first estimate of 1950 production released by the Dominion Bureau of Statistics on August 15. It is too early to assess the effect of frosts reported since the estimate, and further the late harvest date may bring additional damage. However if the above estimate is realized, this will be the third largest crop in the country's history, 49 per cent above the five year 1945-49 average of 366 million bushels and exceeded only in the years 1928 and 1942. Although the 27 million acres seeded to wheat in Canada this year is below the record 1940 level of 28.7 million acres, the average yield per acre of 20.1 bushels is well above the long-time average of 16 bushels per acre.

Oats production is estimated at 433 million bushels, 36 per cent above the 1949 level and 27 per cent above the 1945-49 average. All prov-

inces shared in the increase over last year except Nova Scotia and British Columbia.

The barley crop is forecast at 184 million bushels, 50 per cent greater than in 1949 and 27 per cent above the 1945-49 average. Production in Nova Scotia is expected to be lower than last year, but all other provinces share in the increase.

Rye production is placed at 15.4 million bushels, a gain of 54 per cent over 1949 despite a slightly lower acreage. The flax crop is estimated at 5.2 million bushels, 126 per cent above 1949 but substantially below the 1945-49 average of 9.3 million. Most of the increase over 1949 is in Manitoba and Saskatchewan.

The current outlook is therefore for a very large harvest this fall. It should be noted, however, that these yield estimates may be subject to significant revisions in the light of subsequent harvesting conditions.

The wheat carry-over at July 31 was the largest in the past four years, amounting to 113.2 million bushels. Stocks of rye and oats, however, were below last year's levels, amounting to 6.6 million and 44.3 million bushels, respectively.

<sup>(1)</sup>Not applicable to Column 5 "Average hourly earnings".<sup>(2)</sup>Annual data as of June 1 are adjusted to include certain remote parts of several provinces which are not covered in the quarterly surveys. Quarterly data as of June 5, September 4, November 20, 1948 and March 5, June 4, August 20, October 29, 1949 and March 4, 1950.<sup>(3)</sup>Includes only those not at work and seeking work. <sup>(4)</sup>Includes retroactive payments to railway employees.<sup>(5)</sup>Prior to 1945, figures shown are those relating to hourly earnings in one week in the month of highest employment (overtime included) reported by manufacturers to the annual Census of Industry. For period beginning in 1945, see table 12. <sup>(6)</sup>Conversions are included with annual data only.<sup>(7)</sup>Includes Newfoundland as of April, 1949.<sup>r</sup>Under revision.

<sup>(1)</sup> Personal income is given on an annual basis for months as well as for years.<sup>(2)</sup> Includes army civilian supply exports from February 1947.<sup>(3)</sup> Annual totals are averages of end of month figures.<sup>(4)</sup> Standard and Poor's Corporation. The series currently used represents 416 stocks.<sup>(5)</sup> Series revised to incorporate changes in classification and adjustment to bench mark levels. Revised data prior to August 1948 will be shown later.

<sup>(1)</sup>Estimates are given by years as of June 1, and in Canada as a whole, commencing with the third quarter of 1949, as of the first day of the last month of each quarter.

<sup>(2)</sup>Exclusive of stillbirths.

<sup>(3)</sup>Not applicable to figures on population.

<sup>(4)</sup>Yukon, North-West Territories and Newfoundland not included in figures for births, marriages and deaths.

<sup>(5)</sup>Newfoundland data are included as of June 1, 1949.

Note.—Until the end of 1948, annual and monthly data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Monthly figures for 1949 and the annual average for 1949 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that Province is disregarded.

(1) Monthly data as of end of month while annual section is based on averages of month-end statistics.

(2) As of July 1949, due to changes in method of recording payments, the number of benefit payments (equivalent to the number of beneficiaries) in the week which includes the third Friday of the month, has been substituted for the number of persons receiving benefit in the month.

(3) Prior to 1944 data included deferred as well as current vacancies.

Note: These figures have been revised in order that all industries and industry groups may coincide with the Standard Industrial Classification. In many cases, individual firms have been changed from one industry to another, corresponding with the new definitions of industries. For more detail on types of firms included together with revised monthly figures for 1948, see the December "Report on Inventories and Shipments by Manufacturing Industries".

<sup>(1)</sup>Estimated inventories for all industries and inventories and shipments for selected industries.

Note: As of April 1949, Newfoundland is included.

<sup>(1)</sup>Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.<sup>(2)</sup>Totals include unspecified pulp.

<sup>(1)</sup>Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.<sup>(2)</sup>Excluding producers' interchange.<sup>(3)</sup>Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.<sup>(4)</sup>Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refining in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

Note: Data on production, shipments and stocks include television sets as of September 1949. Data on imports have hereto included television sets.

Newfoundland data are included as of May, 1949.

<sup>(1)</sup>Factory shipments adjusted for change in stocks.

<sup>(2)</sup>Monthly totals of 1949 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.

<sup>(3)</sup>Manufacturers' list prices of Table Model electric standard broadcast radios.

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

<sup>(1)</sup> The coverage was extended to 507 municipalities in 1948, and to 523 in January 1950, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>(2)</sup> As of January 1950, Newfoundland is included.

<sup>(1)</sup>Figures cover the production of firms which normally account for 85 per cent of the total for Canada.<sup>(2)</sup>Since January, 1949, includes concrete chimney blocks. <sup>(3)</sup>Prior to 1947 data on producers' sales were used to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjusting producers' sales for changes in inventories. <sup>(4)</sup>Includes Newfoundland as of May 1949.

<sup>(1)</sup> Includes Newfoundland as of May 1949.<sup>(2)</sup> Hollow blocks including fireproofing and load-bearing tile.<sup>(3)</sup> Planks and boards.<sup>(4)</sup> Prior to 1946 figures represent gross value of production. Figures from 1946 to the present are factory sales of firms which normally account for 96% of total Canadian production.

<sup>(1)</sup>Includes imports to the end of 1948-49 while in 1949-50 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.

<sup>(2)</sup>Figures of customs exports from 1945-46 to 1948-49 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. <sup>(3)</sup>Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption. <sup>(4)</sup>Includes customs exports of Canadian oatmeal and rolled oats.

<sup>(1)</sup> Available for January, April and August only. Indexes for 1948, 1949 and 1950 are subject to revision.<sup>(2)</sup> Includes advance equalization payment on barley until March 1947, and subsidy on hogs from 1944 to date.<sup>(3)</sup> Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.<sup>(4)</sup> Prior to 1941 prices were quoted on a live weight basis.<sup>(5)</sup> Prior to August 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

<sup>(1)</sup>Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transaction,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

<sup>(2)</sup>Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board.

<sup>(3)</sup>Does not include proceeds of 100 million dollar loan floated by the Government of Canada in the United States in August 1949.  
\*See footnote of page 96.

Merchandise Exports by Commodities<sup>(1)</sup>

110

Beginning with April 1950 and the corresponding month of 1949 Newfoundland is included.

<sup>(1)</sup>The annual statistics prior to 1949 embrace all steam railways, while annual averages for 1949, and monthly data for the last two years refer to railways with annual operating revenues of \$500,000 or over.<sup>(2)</sup>Operating income equals operating revenues less operating expenses adjusted for tax accrals and rent of equipment and joint facilities. <sup>(3)</sup>For the Canadian National and the Canadian Pacific, retroactive wage increases, totalling \$29,085,087, paid in September 1948, were not included in that month's operating expenses. Payrolls as now reported monthly are according to the new wage scale.

Note: Newfoundland data are included as of April, 1949.

(1) Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

(2) Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.

(3) Chartered banks' public notice deposits in Canada other than estimated aggregate quarterly minimum balances in personal savings accounts and non-personal notice deposits. (4) Chartered banks' Canadian dollar deposits of provincial governments, Canadian, United Kingdom, and foreign banks. (5) Cheques on banks as shown in chartered bank month-end returns to the Minister of Finance.
