# National Income, Production, and Expenditure in 1950

The behaviour of significant economic indicators during 1950 has been noted and appraised in recent issues of the Review. It is now possible, however, to present an account of the nation's economic activity in 1950 which summarizes in quantitative terms the main lines and directions of economic growth.<sup>1</sup> The National Accounts provide a measure of the value of the nation's total production of goods and services and show the source of the nation's earnings from current productive activity; in addition, they indicate the manner in which this production is utilized by major spending groups.

## Gross National Product and National Income

The value of goods and services produced in Canada in 1950, as measured by the Gross National Product, reached a record total of \$17.7 billion, a gain of 8 per cent over 1949. Although a substantial part of this increase was due to a rise in the price level, nearly one-half of the gain represented an increase in the volume of goods and services produced.

The nation's output in 1950 was produced by an employed labour force, which, on the basis of the average of the four quarterly labour force surveys, was approximately the same as that employed in 1949. There was, however, a notable increase in the number of paid workers in non-agricultural employment and a decline in the number of paid workers in agriculture.

The National Income, that is, the nation's earnings from current production, increased by 8 per cent, from \$13,167 million in 1949 to \$14,164 million in 1950. The composition of the National Income by distributive shares is illustrated by Chart 1.

Salaries, wages and supplementary labour income, which is the largest single component of National Income, showed a gain of 6 per cent over 1949, rising from \$7,800 million to \$8,300 million in 1950. High levels of employment combined with an increase in average hourly earnings were mainly responsible for the rise in labour income. Most of the major industrial groups shared in this increase with the exception of agriculture. As indicated above, this industry experienced a decline in the number of farm workers.

Military pay and allowances, a relatively small component of the National Income, showed a substantial gain of approximately 19 per cent over 1949. This gain is accounted for by the expansion of Canada's armed forces.

Investment income, which includes corporation profits, interest receipts, dividends on stocks, and rents from real estate, showed the largest percentage increase, rising by 21 per cent from \$2,365 million in 1949 to \$2,852 million in 1950. Corporation profits rose substantially, while net rents received by individuals and trading profits of government business enterprises also showed notable gains.

Net income of farm operators from farm production was somewhat lower in 1950 than in 1949. Farm cash income was substantially lower, mainly as a result of a lower initial payment price for wheat, and lower equalization and participation payments from the Canadian Wheat Board. At the same time, operating expenses were higher in 1950 than in 1949. However, there occurred a substantial accumulation of inventories held on farms. The net effect of these factors was that net farm income declined by 6 per cent, from \$1,513 million to \$1,424 million. On the other hand, net income of other unincorporated businesses, including professional income, rose by nearly 6 per cent, from \$1,374 million in 1949 to \$1,451 million in 1950.

1. National Accounts, Income and Expenditure, Preliminary 1950, DBS, Feb. 1951, 7 pages.

The Gross National Product includes, in addition to the factor costs which comprise the National Income, indirect taxes less subsidies, and depreciation allowances and similar business costs. Indirect tax collections rose appreciably in 1950 as a result of rising prices, a greater volume of purchases, and higher indirect tax rates approved in the September Budget of the Federal Government. At the same time, government subsidies declined slightly. Thus, indirect taxes less subsidies increased from \$1,829 million in 1949 to \$2,001 million in 1950, a gain of over 9 per cent.

Depreciation allowances and similar business costs rose by 11 per cent, from \$1,321 million in 1949 to \$1,471 million in 1950. This increase is largely the result of depreciation allowances on the large volume of new capital investment which was completed in 1950.

### Gross National Expenditure

Chart II indicates the manner in which the nation's production of goods and services was absorbed. The year 1950 was characterized by rising expenditures on the part of persons, governments and business. Personal expenditure on consumer goods and services, the largest component of Gross National Expenditure, increased by nearly 7 per cent, from \$11,086 million in 1949 to \$11,810 million in 1950. Much of this increase was taken up by higher prices, but a gain of approximately 3 per cent in the volume of consumer purchases is indicated.

Expenditures on goods and services by federal, provincial, and municipal governments, rose approximately 10 per cent, from \$2,128 million in 1949 to \$2,333 million in 1950. At the federal level, the considerable increase in defence expenditure was offset to the extent of \$50 million due to the fact that government commodity agencies liquidated some inventories in 1950 in contrast with the inventory accumulation of \$32 million in 1949. The rise in expenditure at the provincial and municipal levels was mainly due to higher operating costs, increases in capital expenditures, and flood relief in Manitoba. Despite these increases, however, government expenditure on goods and ser-

## NATIONAL INCOME AND GROSS NATIONAL PRODUCT

## GROSS NATIONAL EXPENDITURE

vices absorbed slightly over 13 per cent of the nation's output in 1950, approximately the same as in 1949.

Expenditures on construction and equipment for general government purposes are included in the figures of government expenditures on goods and services referred to above. The remainder of the nation's outlay for capital investment in housing, plant, equipment, and inventories, made by private and government-operated businesses and by individuals is analyzed below.

The value of new residential construction was \$748 million in 1950, practically unchanged from the figure of \$741 million in 1949. Investment in plant and equipment increased from \$2,220 million in 1949 to \$2,375 million in 1950, a gain of 7 per cent. At the same time, investment in inventories showed a large increase in both value and volume terms. In 1950 the change in inventories amounted to \$785 million, compared with \$108 million in 1949. Both farm and non-farm inventories shared in the rise in inventory accumulation. Taken together, total investment in housing, plant, equipment, and inventories by private and government businesses and by individuals, apparently absorbed a larger percentage of the Gross National Product in 1950 than in 1949.

The value of imports of goods and services in 1950 was approximately \$4,500 million compared with \$3,837 million in 1949, a rise of 17 per cent. The upsurge of demand related to expanding defence programs, rising levels of income, and the progressive removal of import restrictions led to a marked upswing in the value of imports from the United States. At the same time, a gradual recovery of production in Europe and the improved bargaining position of the European seller in Canadian markets resulting from the re-alignment of currencies in September, 1949, made possible an increase in merchandise imports from the non-dollar countries.

On the other hand, the value of total exports of goods and services increased moderately in 1950, from \$4,004 million to \$4,200 million, or by 5 per cent. Although merchandise exports to the United States showed a

III

### PERSONAL INCOME

IV

### DISPOSITION OF PERSONAL INCOME

large rise of approximately 35 per cent over 1949, this increase was offset to a considerable extent by a decline of 33 per cent in the value of merchandise exports to the United Kingdom.

In volume terms, total exports of goods and services showed very little change, while imports increased by approximately 9 per cent.

## Personal Income and Expenditure

Personal income is the sum of all current receipts of income, whether in cash or in kind. It differs from National Income in that it excludes all current earnings not paid out to persons, such as undistributed profits, and includes receipts which have not been earned in the course of production, that is, transfer payments such as family allowances and unemployment insurance benefits. In 1950, personal income was \$13,320 million a gain of 5 per cent over 1949. As indicated in Chart III, the increase is mainly attributable to salaries, wages, and supplementary labour income, but government transfer payments and interest, dividends, and net rental income of persons also increased considerably.

The disposition of personal income is illustrated in Chart IV. Despite higher personal incomes in 1950, total direct personal tax collections declined by 6 per cent. This decline is mainly due to the fact that a substantial part of the personal income tax is paid in the calendar year succeeding the tax

year. Thus, a considerable part of the taxes collected in 1949 included taxes levied on income earned in 1948 when the tax rate was relatively high. As a result, total direct personal tax collections were lower in 1950 than in 1949, despite some increase in succession duties and miscellaneous direct taxes.

Personal expenditure on goods and services, as previously indicated, increased by 7 per cent from 1949 to 1950, but there was considerable variation as between components of personal expenditure. Major gains were recorded for purchases of most durable goods, particularly automobiles, which rose by approximately 60 per cent over 1949. On the other hand, a number of components in the semi-durable goods group, such as clothing, showed a decline. The increase in expenditure on food was almost entirely accounted for by price increases. Of the services, user-operated transportation, and household utilities including rents, showed the highest increases.

The increase in consumer expenditure was the principal factor accounting for a decline of 4 per cent in personal saving, from \$802 million in 1949 to \$769 million in 1950. If changes in farm inventories are deducted from the saving figures, a much greater decline in the rate of saving is indicated. Thus, personal saving, exclusive of changes in farm inventories, was \$604 million in 1950, compared with \$875 million in 1949, which represents 5 per cent of personal income in 1950 compared with 7 per cent in 1949.

---

# Canada's 1951 Census in International Perspective

As the result of a series of conferences and commissions, the 22 nations of the American Continent made plans during the 1940's to take a census of their respective populations in or about the year 1950. In accordance with the terms of the British North America Act and subsequent legislation, Canada will take its Ninth Decennial Census in June, 1951, a date within the proposed time limit for taking the Census of the Americas.

## Historical Development

The idea of taking a census of the Americas on or about the same date is not new. As early as 1908 the Fourth Scientific Congress (First Pan American), held at Santiago, Chile, resolved "that there be a common date for the taking of a census in all of the countries of the American Continent", and "that to the extent possible, there be adopted uniform schedules which may facilitate the comparison of the results of the censuses in all countries of the American continent, and which at the same time may increase and improve the data required for sociological, economic and political studies". Similar resolutions were adopted in 1910 at the Fourth International Conference of American States at Buenos Aires, Argentina, and at the Fifth Conference at Santiago, Chile, in 1923.

The First Inter-American Demographic Congress, held in Mexico in 1943, recommended:

"that the American governments take the necessary steps to carry out during the years 1950 and 1951, a Census of the American Continent, and that, besides the strictly demographic aspect, it shall contain in integral form, the social economy according to the basic plan elaborated by the Inter American Statistical Institute and approved by the governments, without prejudice that each State, in accordance with its

respective administrative necessities and with its experience, can give to the above-mentioned statistical operation the amplitude which it shall deem suitable".

The Second Pan American Consultation on Geography and Cartography, meeting at Rio de Janeiro, Brazil, in 1944, suggested an agreement between the Pan American Institute of Geography and History and the American Statistical Institute regarding the preparation of maps for the 1950 Census.

The Third Inter-American Conference on Agriculture, held at Caracas, Venezuela, in 1945, recommended:

"that each nation in the Western Hemisphere adopt the necessary measures for the taking of a national census of population and agriculture (including livestock and forest products) for the year 1950", and "that each nation co-operate with the Inter American Statistical Institute and with the Food and Agriculture Organization to the end that minimum standards of uniformity may be adopted for such censuses, thus facilitating comparison".

The First Session of the United Nations Statistical Commission, meeting at Lake Success, N.Y., early in 1947, recommended that the Economic and Social Council express its belief "that the experience gained in the preparation and conduct of this co-operative project will be of great value to Member Governments in their own countries, and that it will serve as a basis for useful conclusions in possible projects in all countries of the world". This recommendation was shortly afterwards endorsed at Lake Success by the First Session of the United Nations Population Commission. The Commission recommended the use of comparable schedules by Member States proposing to take a census in or about 1950.

The Economic and Social Council of the United Nations at its Fourth Session in March, 1947, requested the Secretary General of the United Nations to offer advice and assistance to Member States prepared to take comparable population censuses. In the following month the Inter-American Council of Commerce and Production, meeting at Montevideo, Uruguay, recommended support of the work relating to the preparation, publication and execution of demographic and agricultural censuses to be taken in 1950. Many other international agencies and commissions have urged the adoption by American countries in common of those aspects of the census, such as agriculture and education, in which they were primarily interested.

## Census of the Americas

Most of the 22 nations of the New World scheduled their population censuses to take place between July 1, 1949, and June 30, 1951. More than that, they simultaneously made preparations for censuses of agriculture, housing, etc. Greatest emphasis was placed, however, on the population census. Basic minimum standards for the census were developed under the auspices of the Inter American Statistical Institute (IASI), those for the census of agriculture being of major concern to the Food and Agriculture Organization of the United Nations (FAO). Co-operative arrangements are in effect between these two organizations for integrating the agricultural census as part of the 1950 Census of the Americas and of the World Census of Agriculture.

What this international co-operation hopes to accomplish is indicated by the publication of the Statistical Yearbook, prepared by the Statistical Office of the United Nations. It is the aim of the tables in the Yearbook to show for the various countries continuous time series which are as nearly comparable internationally as the available statistics permit. More detailed and comprehensive data on population can be found in the Demographic Yearbook, a publication of the Office of the United Nations in collaboration with the Population Division of the Department of Social Affairs. This publication is "intended to meet the need for a central source of demographic data.....(it) also meets certain

needs of the United Nations and the specialized agencies, and of national governments and institutions". It aims to treat statistically forty-eight general topics grouped under the headings (1) Area and Population, (2) Economically Active Population, (3) International Migration, (4) Natality, (5) Mortality, (6) Morbidity, (7) Marriage and Divorce. Every three months a bulletin entitled "Population and Vital Statistics" is published, bringing the statistics of the Demographic Yearbook up to date.

## Canadian Co-operation

As has been pointed out, Canada's Ninth Decennial Census falls within the suggested period for taking the Census of the Americas, since it will be taken in June of this year. The interest of other countries, already shown at the Trial Census in October, 1949, is indicated by the projected visits to Canada of official observers from other countries. A comparison of the projected forty-eight general topics of the Demographic Yearbook, with the questions to be asked in the Canadian Census, shows the extent to which the statisticians of Canada and other countries have collaborated. Some of the material listed by the Yearbook, of course, will not appear in the Canadian Census records, since it is collected on an annual basis by other means. This particularly applies to vital statistics. Three of the groups and part of a fourth listed by the Yearbook contain such subjects as total population, population density, population of major cities, population by age and sex, population by urban and rural divisions, number of households, labour force by age and sex, and immigrants by origin and nationality.

The Canadian population document for the 1951 Census contains questions on age, sex, household, citizenship, origin, employment, etc., which, taken in conjunction with other data obtained by the enumerator, will make Canadian census results comparable with those of other American countries. It will be possible, in short, to tabulate Canadian census information under the headings given in the Demographic Yearbook.

The extent of collaboration with the Food and Agriculture Organization in the Canadian

Census of Agriculture can be seen in the seven broad categories which were suggested by Dr. R.H. Coats, Statistical Consultant for FAO, for inclusion in every census of agriculture. The suggested categories are:

- "1. Agricultural lands and their utilization, classified as (a) crop lands (areas under important grains, fruits, vegetables, etc.), and (b) pasturage and forest lands. The number and size of individual holdings down to as small amounts as possible should be obtained, also the status of the cultivator (whether owner, tenant, sharecropper, etc).....
- "2. The number of farm live stock (including poultry) classified by kinds and purposes; dairying.
- "3 Other material equipment of agriculture, including farm buildings and permanent improvements: farm implements and machinery by classes; mechanical power employed.
- "4. The current year's total harvested production by important categories as related to the foregoing, also stocks and products on hand at the census date.....
- "5. General economic features, such as farm incomes; costs of operation and inputs including expenditures on seed, fertilizer, pesticides, wages, taxes, interest on loans, etc.; farm mortgages and other loans and credits; crop failures in the census year.
- "6. The farm population and its elements: (a) the family of the cultivator, its members classified by sex, relationship, and other characteristics; (b) non-family labour employed, number and characteristics, wages paid, etc. Recent movements of population to and from the land should be measured.
- "7. The social condition of agriculture; family consumption of products of the farm; other nutritional aspects; housing."

In general, all of these broad categories will be dealt with in the Canadian Census,

except part of the third and part of the fifth category. "Farm buildings and permanent improvements" will not be dealt with separately in the 1951 Census. "Farm mortgages" will be asked only in the case where the farm is owner-operated, and no information about "crop failures" will be sought in 1951. Much of the information in the fifth category is obtained in other ways on an annual basis, and information on these topics will not be sought by the census enumerators.

The Canadian Census, taken together with the censuses of the other American countries, provides the framework for any scheme of Western Hemisphere food production in relation to the socio-economic requirements of the population. When the results have been tabulated and published it will be possible to see how much the Americas will require for the sustenance of their own populations, how much of the individual surpluses will be available for distribution among themselves, and how much will be available for export to other countries. Every country should be in a better position to appreciate the potentialities and necessity for greater production if one of the root causes of international unrest and misunderstanding — mal-distribution of consumer goods — is to be eliminated. Canada in particular will be apprised not merely of her own position in the whole Western Hemisphere, but Canadians will be more conscious of the home market and its potentialities. The Census of the Americas, to which the Canadian Census contributes, is a part of the streamlining process of endeavouring to make the Western Hemisphere more sufficient for its own good and at the same time contributing its share to the good of the world in general.

2

(1) Annual data as of June 1 are adjusted to include certain remote parts of several provinces which are not covered in the quarterly surveys. Quarterly data as of November 20, 1948 and March 5, June 4, August 20, October 29, 1949 and March 4, June 3, August 19, November 4, 1950.

(2) Includes only those not at work and seeking work.

(3) Newfoundland is included in estimates from October, 1949.

(4) Includes Newfoundland as of April, 1949. (5) Conversions are included with annual data only.

\*Under revision.

<sup>(1)</sup> Estimates are given by years as of June 1, and in Canada as a whole, commencing with the third quarter of 1949, as of the first day of the last month of each quarter.<sup>(2)</sup> Exclusive of stillbirths. <sup>(3)</sup> Not applicable to figures on population.<sup>(4)</sup> Yukon, North-West Territories not included in figures for births, marriages and deaths. Newfoundland presented for 1949 only.

Note.—Until the end of 1949, annual and monthly data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Monthly figures for 1950 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that Province is disregarded.

(1) Monthly data as of end of month while annual section is based on averages of month-end statistics.

(2) As of July, 1949, due to changes in method of recording payments, the number of benefit payments (equivalent to the number of beneficiaries) in the week which includes the third Friday of the month, has been substituted for the number of persons receiving benefit in the month.

(3) Supplementary benefit payments are excluded.

(4) Prior to 1944, data included deferred as well as current vacancies.

Note: These figures have been revised in order that all industries and industry groups may coincide with the Standard Industrial Classification. In many cases, individual firms have been changed from one industry to another, corresponding with the new definitions of industries. For more detail on types of firms included together with revised monthly figures for 1948, see the December "Report on Inventories and Shipments by Manufacturing Industries".

(1) Estimated inventories for all industries and inventories and shipments for selected industries.

Note: Annual figures for 1949 include Newfoundland for the full year, while in the monthly totals, Newfoundland is included as of April, 1949, only.

<sup>(1)</sup>Total pulp production was revised where necessary to cover "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

<sup>(2)</sup>Totals include unspecified pulp.

<sup>(1)</sup> Monthly totals of 1948 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months.<sup>(2)</sup> Excluding producers' interchange.<sup>(3)</sup> Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.<sup>(4)</sup> Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope. A substantial part of the imports appears after refinishing in total shipments. Production of primary iron and steel shapes from Canadian steel is equivalent to about 72 percent of the total production of ingots.

The twenty-three municipalities for which data are shown historically were selected as being leaders in the amount of permits issued during the years listed above. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December 1946.

<sup>(1)</sup> The coverage was extended to 507 municipalities in 1948, and to 523 in January 1950, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

<sup>(2)</sup> As of January 1950, Newfoundland is included.

(1) Figures cover the production of firms which normally account for 85 per cent of the total for Canada.

(2) Since January, 1949, includes concrete chimney blocks. (3) Prior to 1947 data on producers' sales were used to indicate production. Annual and monthly production for 1947, 1948 and 1949 are obtained by adjusting producers' sales for changes in inventories. (4) Includes Newfoundland as of May, 1949.

(1)Includes Newfoundland as of May, 1949.

(2)Hollow blocks including fireproofing and load-bearing tile.

(3)Planks and boards.

(4)Prior to 1946 figures represent gross value of production. Figures from 1946 to the present are factory sales of firms which normally account for 96% of total Canadian production.

<sup>(1)</sup>Includes imports to the end of 1949-50 while in 1950-51 wheat imports are taken in as monthly data become available; inward shipments of oats and barley will be added at the end of the crop year.<sup>(2)</sup>Figures of customs exports from 1945-46 to 1949-50 are adjusted to reflect actual physical movements from Canada. Previous to 1945-46 adjusted figures are not available. <sup>(3)</sup>Prior to 1936-37 Canadian customs figures are used. From 1936-37 to date, exports consist of overseas clearances plus U.S. imports for consumption. <sup>(4)</sup>Includes customs exports of Canadian oatmeal and rolled oats.

<sup>(1)</sup> Available for January, April and August only. Indexes for 1948, 1949 and 1950 are subject to revision.<sup>(2)</sup> Includes advance equalization payment on barley until March, 1947, and subsidy on hogs from 1944 to date.<sup>(3)</sup> Based on price for hogs including Dominion premium. A rise in ratio favours production of beef.<sup>(4)</sup> Prior to 1941 prices were quoted on a live weight basis.<sup>(5)</sup> Prior to August, 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

## Exports of Live-Stock Products

<sup>(1)</sup>Official holdings of Gold and U.S. dollars are given as of end of year and month in Statistical Summary of the Bank of Canada and Annual Report of Foreign Exchange Control Board.

<sup>(2)</sup>Annual results are from the Canadian Balance of International Payments and monthly totals as given in Trade of Canada. In the balance of payment figures trade statistics have been adjusted to bring them closer to the international exchange of goods with each country, by using payments data or other substitutes in the case of certain special groups of transactions where physical movements of goods do not reflect international financial transaction,—e.g.—special shipments of munitions during the war, and the warehousing of Canadian wheat outside of Canada. Mutual aid exports are represented by financial transactions which in some years are subject to revision. Non-commercial items have been deducted throughout.

<sup>(3)</sup>As of January, 1950, Newfoundland is included.

<sup>(4)</sup>Does not include proceeds of 100 million dollar loan floated by the Government of Canada in the United States in August, 1949.

\*See footnote of page 96.

Beginning with April, 1950, and the corresponding months of 1949 Newfoundland is included.

<sup>(1)</sup> The annual statistics embrace all steam railways, and monthly data refer to railways with annual operating revenues of \$500,000 or over.<sup>(2)</sup> Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities.

Note: Newfoundland data are included as of April, 1949.

(1) Note Circulation of Bank of Canada and chartered banks, excluding notes held by chartered banks.

(2) Subsidiary coin issued by the Mint less coin held by Bank of Canada and chartered banks in Canada.

(3) Chartered banks' public notice deposits in Canada other than estimated aggregate quarterly minimum balances in personal savings accounts and non-personal notice deposits. (4) Chartered banks' Canadian dollar deposits of provincial governments, Canadian, United Kingdom, and foreign banks. (5) Cheques on banks as shown in chartered bank month-end returns to the Minister of Finance.

Note: This statement does not include any receipts other than revenues nor any disbursements other than regular budgetary expenditures. Excluded, for example, are all receipts arising from repayments of loans and advances, or from accumulations on annuity, pension and insurance funds. Similarly excluded on the expenditure side, for example, are all Govt. outlays arising from increases in loans, advances and investments.
