Current Economic Conditions

Although the levels of employment and industrial output for the first seven months of the year were well above those of the corresponding period last year, there was a distinct falling-off in the rate of increase during June and July. Latest figures show a significant decline in consumer spending which has presumably developed as an aftermath of the heavy anticipatory buying in the early months of the year. It no doubt reflected, in addition, the imposition of consumer credit restrictions. In value terms, retail sales in July showed an increase of 5 per cent over July a year ago. However, if allowance is made for price increases, the volume of retail trade appears to have decreased by 9 per cent. A significant shift is also noted in the statistics of consumer credit. In the second quarter the percentage of credit sales to total sales dropped to 26.8 per cent after having risen to 29.3 per cent, a high for recent years, in the first quarter. There was also a slackening in the rate of increase of bank credit in the post-budget period. The increase in current public loans by chartered banks, after having accelerated sharply during the last half of 1950 and the first three months of this year, eased off during the second quarter and was arrested in July, as the total of loans outstanding dropped fractionally. Although federal government expenditures for national defence have not yet reached the levels forecast in the March budget they are increasing rapidly and should exert a growing influence on the economic picture in the coming months. As yet, armament spending has had no noticeable effect on the supply of consumer goods. Contributing to the pattern of developments has been the steadily rising trend of prices and wages. Both the cost-of-living index and average weekly earnings rose to new record levels during July.

Production and Employment

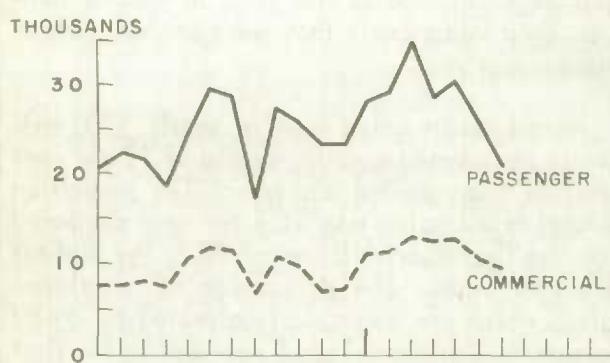

During the first seven months of this year, the index of industrial production averaged 12 per cent higher than the comparable period of 1950. While the increase over last year was running at a rate of about 14 per cent for the first five months, the figures for June and July reflect a curtailment of this trend. The June-over-

June and July-over-July comparisons showed gains of only about 7 per cent. The drop in industrial output in July as compared to June can be partly attributed to the practice of many firms to close down their plant for summer holidays. There is as yet no compensation for this in the seasonal adjustment. Meanwhile the value of manufacturing inventories continued to rise in July. Since April, the increase has been more than 12 per cent. As wholesale prices during this period rose by less than one per cent, the recent gain may be attributed largely to increases in volume of stocks. Undoubtedly some manufacturers will take advantage of the holiday shut-downs to reduce excess inventories. A better appraisal of the situation will be possible when the September figures, which normally reflect the fall pickup in industrial activity, become available.

Despite the decline, in recent months, of the rate of increase of manufacturing output, the record for the first seven months as a whole is still quite remarkable. Manufacturing industries produced 11 per cent more goods during the elapsed portion of this year than in the comparable period of 1950. A considerable expansion in the output of durable goods accounted for the greater part of this increase. Over the period, production in these industries rose by over 18 per cent, while the corresponding gain in the production of non-durable commodities was only about 6 per cent. It is not likely that the rate of increase for durables will be maintained during the remaining months of the year. In the last few months the output of such consumer's goods as automobiles, electric refrigerators and washing machines have suffered severe setbacks (see charts). In fact, the production levels of these commodities in June and July fell below those of the same months last year. In July, factory shipments of passenger cars totalled 21,000 compared with nearly 29,000 in July 1950. The figure for July of this year represented a drop of 40 per cent from the March peak of nearly 35,000 units. Production of electric refrigerators and washing machines was also considerably below last year's levels. Consumer demand for these commodities has dropped to a greater extent than output figures indicate. Domestic sales of

TRENDS IN CONSUMERS' GOODS

PRODUCTION OF MOTOR VEHICLES

sales for the first quarter was nearly 20 per cent greater than the same period last year. In the same comparison, retail commodity prices rose by about 9 per cent so that roughly half the increase in value was due to a greater volume turnover. During the second quarter, the value of sales increased 12 per cent over 1950 while prices advanced about 13 per cent, thus reflecting a slight drop in volume. In July, this adverse trend was sharply accelerated. Total sales, at \$828 million, were less than 5 per cent above the value recorded in July last year, although commodity prices had risen by nearly 15 per cent in the interval. This indicated a decline of about nine per cent in volume. Recessions in value of sales were recorded for department stores, motor vehicle dealers, coal and wood dealers, jewellery stores and furniture and ap-

pliance stores. Food store sales were up 13 per cent in value and thus represented a greater share of total sales, although price advances more than accounted for the increase. Preliminary figures for department store sales in August indicate no change in the trend of volume turnover. On a value basis they were unchanged from August last year.

Retail credit sales rose to nearly \$700 million in the second quarter, a gain of 11 per cent over the same period last year. The proportion to total retail sales was 26.8 per cent compared with the first quarter figure of 29.3, the highest in recent years. The percentage of instalment sales, which are particularly affected by credit restrictions, dropped from 8 per cent in the first quarter to 7.1 per cent.

Review of Foreign Trade

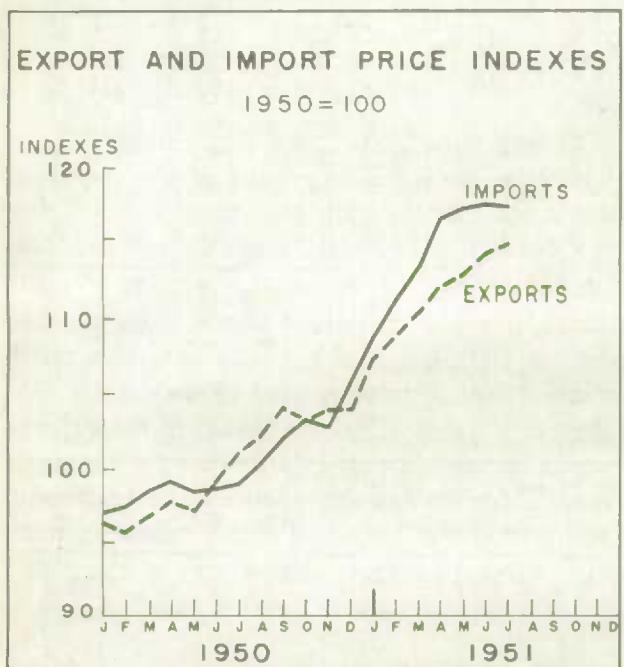

The most notable development in Canada's foreign trade in the first half of 1951 has been the spectacular upsurge in imports. While the steadily rising level of prices in international trade has played a significant part in this increase the greater part represents an increased inflow of goods. Import prices in the half-year averaged some 16 per cent above the first half of 1950, while the volume of imports gained almost 25 per cent, resulting in a total value increase of 45 per cent.

Exports have also risen sharply above the level of 1950, although not as much as imports. In the first half of 1951 they rose by 22 per cent in value, but the major part of the increase was due to price. The volume of exports was almost 7 per cent above the first half of 1950. The first half comparison does not mean, however, that this rate will be maintained for the year. The measure of increase achieved this year over the export volume of the first half of 1950 is due in part to the fact that during the first quarter of last year exports were somewhat depressed by market readjustment problems. It should be noted that the trend of the volume of exports is still rising; in July, 1951, it was some 30 per cent above the volume of July, 1950, which represents the largest change from the same month of the previous year which has occurred in 1951.

As has been stated, the rise in the volume of imports since the beginning of the year has been much greater than that of exports. Since the Canadian economy is operating at or close to capacity, a rapid increase of exports in such a short time can take place only if domestic demand is curtailed. But because domestic utilization of output actually rose in the period, the extent of any sustained expansion of the volume of exports has been strictly limited. On the other hand, Canadian imports represent a relatively small part of the output of those countries from which they are largely drawn, and a sharp expansion in Canadian demand places little additional overall strain on their productive facilities. Expansion of the volume of Canadian imports in most lines has not been, up to the present time, severely restricted by supply limitations and has depended largely on Canadian effective demand.

The pressure of demand from abroad for Canadian exports and Canadian demand for imports has been great throughout the half-year. The outbreak of war in Korea added new demands in Canada to already heavy business investment expenditures, expenditures by consumers, and the requirements of industries likely to be affected by defence production. In addition to satisfying demands for goods for immediate use

in production and consumption, imports were used to build inventories to recent high levels. Similar forces operated in other countries. The whole of this demand could not be met by existing productive facilities; the result was a sharp renewal of the general post-war price rise which had been halted in late 1948 and early 1949. From June to December, 1950, import prices rose 7 per cent and export prices almost 5 per cent in spite of the insulating effects of the appreciation of the Canadian dollar in October. From December, 1950, to June, 1951, a further rise of over 11 per cent in import prices and almost 10 per cent in export prices occurred. The slower rise in export prices led to some deterioration in the terms of trade, and contributed to the growing merchandise deficit. In the last few months, however, the gap between the two series seems to have closed somewhat (see chart).

Direction of Trade

The changed pattern of trade by countries established during 1950 was maintained during the first half of 1951, with relatively little further change. The United States took about 64 per cent of Canada's exports and supplied 70 per cent of imports for about the same proportion of trade as last year. The share of the United Kingdom in exports declined 2 per cent to 14.4 per cent, and for the first time in three years her share in imports was reduced, falling to 10.7 per cent from 12.9 per cent. However, the July

figures show some increase in the United Kingdom's share of Canada's imports, and a parallel decrease in the share of the United States.

European countries accounted for a greater proportion of both exports and imports this year. The share of Latin America was little changed, and in trade with the Commonwealth exports were proportionately less and imports greater. A sharp increase in exports to Japan was largely responsible for the increased share of other countries in Canada's trade.

The balance of trade was sharply adverse in the first half of 1951, amounting to \$339.8 million. On United States trade it amounted to \$344.1 million. This was the highest value since the 1947 half-year peak of \$488.0 million. Unlike 1947, however, trade with the rest of the world did not yield a heavy surplus in the first six months of this year. The shift in the trade pattern which occurred in 1950 eliminated the greater part of the bilateral imbalance in trade with other countries, and in the first half of 1951 the balances with the United Kingdom and the major trading areas became in each case less favourable, with the single exception of the "others" group. However, a heavy inflow of foreign capital prevented any sizable decline in Canada's reserves of gold and United States dollars.

The Commodity Pattern

There was little major change in the commodity pattern of trade in the first half of 1951. In exports, the wood products group accounted for 37 per cent of the half-year's exports as opposed to 34 per cent a year ago, and the animal products and miscellaneous commodities groups' shares were somewhat reduced. A sharp recovery in lumber exports to overseas countries (particularly the United Kingdom) together with slightly greater sales to the United States was the most interesting feature of the wood products increase. In the other groups, the sharp increase in asbestos exports was a noteworthy change, as was the gain in sales of all base metals except copper. Higher domestic consumption of copper, together with a somewhat unfavourable price in the United States during part of the period, led to lower exports of this metal. Wheat sales declined in value although more bushels were sold, the low grade of the 1950 crop depressing the average price received. Exports of most other major farm products increased in value.

⁴ Note.—Until the end of 1949, annual and monthly data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Figures for 1950 and 1951 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Estimates are given by years as of June 1, and in Canada as a whole, as of the first day of the last month of each quarter. ⁽²⁾Exclusive of stillbirths. ⁽³⁾Not applicable to figures on population. ⁽⁴⁾Yukon, North-West Territories and Newfoundland not included in figures for births, marriages and deaths.

The Canadian Labour Force

TABLE 7

CLASSIFICATION	1947	1948	1949	1950 ⁽¹⁾	1950			1951	
	Survey Averages				June 3 ⁽²⁾	Aug. 19	Nov. 4	March 3	June 2
	Thousands of persons 14 years of age and over								
Non-institutional Civilian Population.....	8,960	9,132	9,324	9,709	9,690	9,717	9,751	9,800	9,854
Civilian Labour Force.....	4,908	4,982	5,090	5,216	5,233	5,324	5,201	5,172	5,332
Agricultural.....	1,119	1,100	1,094	1,038	1,077	1,153	974	854	1,017
Non-agricultural.....	3,789	3,882	3,996	4,178	4,156	4,171	4,227	4,318	4,315
With jobs.....	4,810	4,879	4,957	5,046	5,083	5,221	5,084	5,000	5,247
At work—35 hours or more.....	4,222	4,301	4,377	4,422	4,569	4,563	4,513	4,245	4,699
At work—15 to 34 hours.....	318	337	348	373	333	299	378	433	339
At work—1 to 14 hours.....	114	109	97	100	93	92	94	111	117
Not at work but with jobs.....	156	132	135	151	88	267	99	211	92
Paid workers.....	3,262	3,372	3,469	3,571	3,564	3,639	3,683	3,665	3,802
Agricultural.....	119	134	144	112	122	133	102	69	114
Non-agricultural.....	3,143	3,238	3,325	3,459	3,442	3,506	3,581	3,596	3,688
Without jobs and seeking work.....	98	103	133	170	150	103	117	172	85
Persons not in the Labour Force.....	4,052	4,150	4,234	4,493	4,457	4,393	4,550	4,628	4,522

Note.—These estimates are derived from a sample survey and are subject to sampling error. In general the smaller the estimate the larger is the relative sampling error.

⁽¹⁾Newfoundland included in estimates from March, 1950. ⁽²⁾Due to flood conditions, estimates for Manitoba for June, 1950 were based on previous experience rather than direct survey.

Reported by firms customarily employing 15 persons or more. Statistics throughout Tables 9 to 11 are compiled from data which relate to the last pay period of the preceding month. 11

*Average weekly wages and salaries.

(1)Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products. (2)Includes foods and beverages, tobacco and tobacco products, rubber products, leather products, textile products except clothing, clothing, paper products, printing, publishing and allied industries, products of petroleum and coal, chemical products, and miscellaneous manufacturing industries.

20 Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that province is disregarded.

(1) Monthly data as of end of month while annual section is based on averages of month-end statistics. (2) As of January 1950, the number of benefit payments (equivalent to the number of beneficiaries) in the week which includes the last day of the month has been substituted for the number of payments in the week which includes the third Friday of the month. (3) Supplementary benefit payments are excluded.

(1) As of January, 1950 includes some silvery pig iron formerly included with ferro-alloys. (2) Excluding producers' interchange. (3) Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products. (4) Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope.

Generally, the twenty-four municipalities for which data are shown were selected as being leaders in the amount of permits issued during the period 1926-1946. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December, 1946.

42 ⁽¹⁾The coverage was extended to 507 municipalities in 1948, and now stands at 546, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽²⁾As of January, 1950, Newfoundland is included.

⁽¹⁾Figures cover the production of firms which normally account for 85 per cent of the total for Canada.⁽²⁾Since January, 1949, includes concrete chimney blocks. ⁽³⁾Prior to 1947 data on producers' sales were used to indicate production. Data for 1950 and 1951 are obtained by adjusting producers' sales for changes in inventories.⁽⁴⁾Includes Newfoundland as of May, 1949. ⁽⁵⁾Hollow blocks including fireproofing and load-bearing tile. ⁽⁶⁾Planks and boards. ⁽⁷⁾Prior to 1946 figures represent gross value of production. Figures from 1946 to the present are factory sales of firms which normally account for 96% of total Canadian production.

(1) Includes advance equalization payment on barley until March, 1947, and subsidy on hogs from 1944 to date.

45

(2) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (3) Prior to 1941, prices were quoted on a live weight basis. (4) Prior to August, 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

Beginning with April, 1950, and the corresponding months of 1949 Newfoundland is included.

59

⁽¹⁾In the upper section of this table, the annual statistics prior to 1950 embrace all steam railways, while monthly averages for 1950 and monthly data refer to railways with annual operating revenues of \$500,000 or over. ⁽²⁾Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities.

⁽¹⁾Assignments made under the Bankruptcy and Winding Up Acts.⁽²⁾Quarterly data for the last five columns are monthly averages.⁽³⁾In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Since July, 1950, agreements made under this method are not included with the statistics of bankruptcies. The number of proposals for this period were: J. 13, A. 16, S. 7, O. 8, N. 20, D. 15, J. 12, F. 21, M. 18, A. 13, M. 15 and J. 23. Liabilities of insolvent persons making proposals are not available.
