Current Economic Conditions

COMPARISON OF SELECTED INDICATORS

Postwar Trends in Consumer Expenditure — II

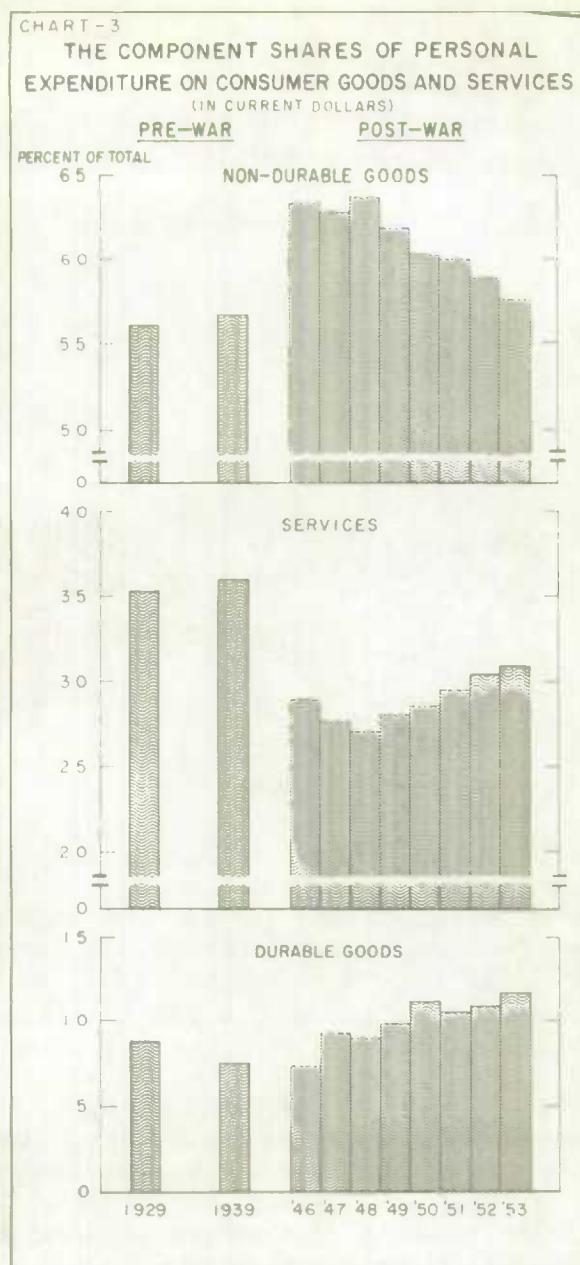

The expansion of personal expenditure on consumer goods and services since the war was outlined in the August issue of this Review. It was pointed out at that time that this overall advance was matched by the rise in personal disposable income, with the result that the margin for personal saving was well maintained. After allowance for price changes and population growth, expenditure on consumer goods and services in terms of the quantity absorbed per person showed an erratic pattern throughout these years, reaching a peak in 1953 when it was about 5 per cent higher than in 1946. The high 1953 per capita consumption was associated with rapidly rising personal income in that year and in 1952, and accompanying stability in consumer prices. The resulting increases in "real" earnings and income were sufficient to

provide not only for large gains in "real" consumption, but also for a high margin of saving.

The growth in food outlays accounted for more than 23 per cent of the total expansion in the value of personal expenditure on consumer goods and services from 1946 to 1953; the increase in expenditure on rent accounted for another 14 per cent, and the advance in the sale of automobiles for an additional 9 per cent of the total increase. These three groups together, therefore, accounted for nearly one half of the overall growth in personal expenditure on consumer goods and services in current value terms. It is interesting to note, however, that in volume terms, these three items accounted for only about 42 per cent of the increase in total consumer outlay.

The Component Shares

It was pointed out in the August Review that important shifts had occurred in the distribution of personal expenditure between 1946 and 1953. Among the three main components, the most striking expansion was made by the durable goods sector, associated with expanding automobile sales, and the advent of television to the Canadian market. Thus, the durable goods sector accounted for about 12 per cent of personal expenditure on consumer goods and services in 1953 compared with 7.5 per cent in both 1939 and 1946.

The share of non-durable goods in consumer buying declined steadily from 1946 to 1953, as the accompanying chart illustrates, toward a position more comparable with its share in the pre-war years (as shown by 1929 and 1939). It may be noted, however, that this diminishing share did not indicate an absolute decline; expenditure on non-durable goods continued to increase in absolute terms and to absorb by far the largest share of the consumer dollar (taking approximately 57 per cent in 1953).

Personal expenditure on services had risen in value only moderately during the war years when rent controls and other restrictions were in effect and a relative shift of resources was taking place to meet the emergency requirements. Thus, the share of services in the total declined steadily from 1939 to 1946; this declining share continued until 1948. Beginning in 1949 consumer outlays for services accounted for a steadily growing proportion of personal expenditure, as price increases became more pronounced and some gains occurred in the volume of services consumed¹.

In the first half of 1954, personal expenditure on consumer goods and services has continued to increase and has been a major source of strength in maintaining final expenditures when declines have been evident in many other final demand categories. This further growth in personal expenditure for consumption in current value terms reflected in particular a further rise in outlays on services, and a slightly smaller increase in expenditures for non-durables. The durable goods component, in contrast to the general pattern noted above, fell off moderately, largely associated with the decline in automobile sales. These shifts have resulted in some change in the distribution of personal expenditure among the three components; the share of the service component showed a further moderate increase, while that of durable goods was somewhat reduced.

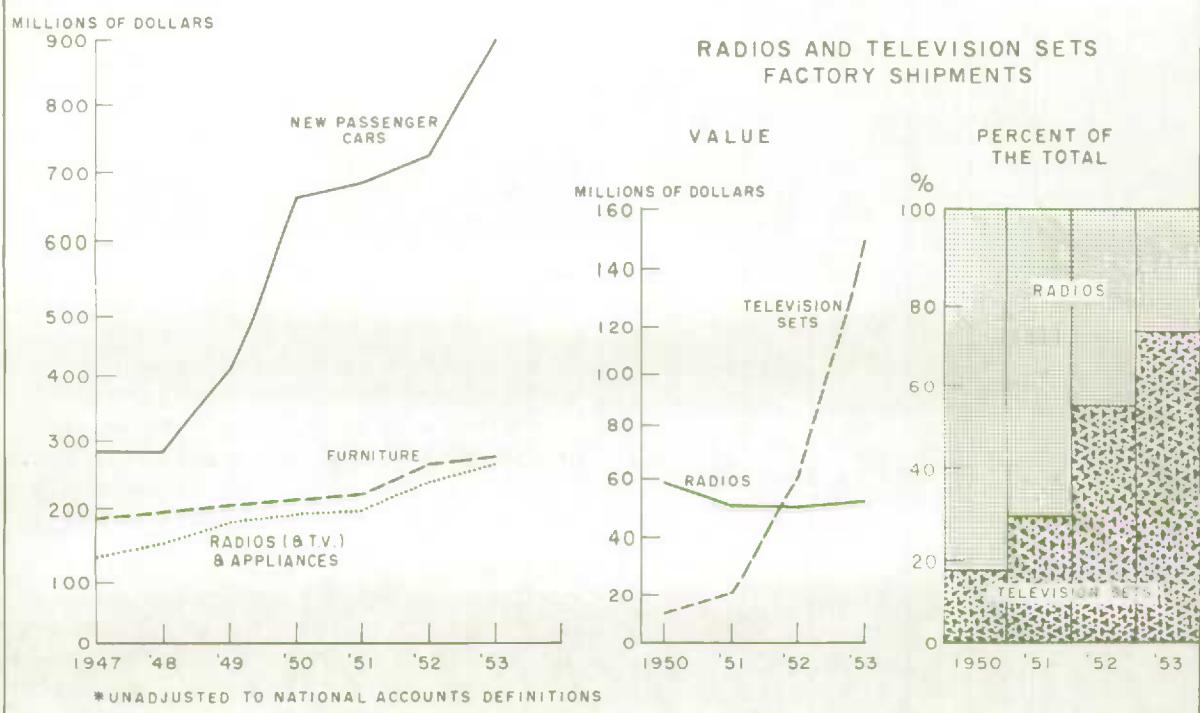

Some of the significant developments within each component are outlined below for the period under review.

1. It should be noted that the greatest expansion in the service group occurred in the rent component which contains an imputed rent for owner-occupied houses and, therefore, reflects in part the expansion of residential construction.

The Durable Goods Sector

CHART - 4

PERSONAL EXPENDITURE ON SELECTED CONSUMER DURABLE GOODS*

The durable goods sector consists mainly of new passenger cars, radios (and television sets), household appliances and furniture. As was pointed out above, expenditure for durable goods experienced the most rapid advance of any of the three major components of consumer expenditure in the postwar period (see charts 1, 2 and 3). In the early years after the war, demands for all types of durable goods were widespread, reflecting accumulated war-time backlog; in more recent years, however, expenditures in this sector have been concentrated, for the most part, in particular lines such as automobiles and television sets.

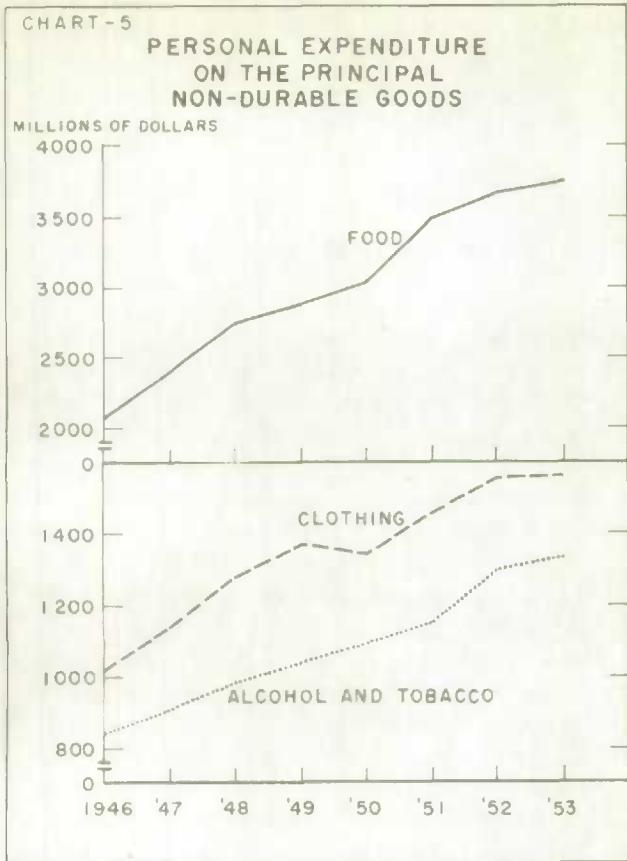

New passenger cars, the principal durable item, accounted for the largest absolute increase in expenditure on durables between 1947 and 1953, having risen by approximately \$513 million*. Automobile purchases as a proportion of personal expenditure on durable goods rose from 28 per cent in 1947 to 42 per cent in 1953. In 1953 there was one car per six persons in Canada, compared with one per nine persons in

1939 and 1947. Sales of television sets have been a further important stimulus to the durable goods sector particularly since 1950. In that year, the value of factory shipments of television sets amounted to approximately \$13 million; by 1952 they had grown to more than \$60 million, and in 1953 amounted to \$150 million, almost three times the value of factory shipments of radios. In the first six months of 1954, further expansion has been evident, with the value of shipments of television sets for the half year being 24 per cent higher than in the same part of 1953.

While more moderate rates of increase have occurred in the sales of major household appliances since 1947, the gain in value terms of these items has nevertheless been substantial. This increase reflects in part the postwar expansion of population, new residential building, and in part the more widespread use of major appliances by households. The latter trend is borne out by the decennial censuses of 1941 and 1951. The proportion of homes with refrigerators increased from 21 per cent in 1941 to 47 per cent in 1951; with radios from less than 80 per cent to 92 per cent; and with electric vacuum cleaners from 25 per cent to 41 per cent.

* Sales of new automobiles in 1946 were abnormally low, reflecting the process of tooling up after the virtual cessation of new passenger car production in the later war years; 1946, therefore, is not used here for comparison.

Non-Durable Goods Sector

The three principal commodity groups in the non-durable goods component are food, clothing, and alcoholic beverages and tobacco, which together account for approximately 80 per cent of the value of expenditures on non-durable goods.

Food sales, the largest of these three groups, experienced the greatest advance in value terms, increasing by approximately \$1.7 billion or by 80 per cent from 1946 to 1953. After allowance for the price rise, however, the increase was about 14 per cent. Until 1951, the higher values of food expenditures reflected almost entirely rising prices; as a result, there was only a modest increase in food consumption after allowance for price changes. This rate of advance was considerably less than the rate of population growth from 1946 to 1951 so that in constant dollar terms the amount of food consumed per person appeared to be very much lower in 1951 than in 1946. In 1952, however, when food prices were being reduced, there was an increase in the volume of per capita consumption, with the result that the value of food expenditure's continued to advance. This trend was also evident in 1953 when further reductions in food prices occurred. Despite

these increases in food consumption in 1952 and 1953, the constant dollar amount taken per person was below the 1946 level; but it remained well above the pre-war year of 1939. In the first six months of the current year, with prices on average relatively unchanged, there was a further advance in the volume of per capita food consumption.

Taking the postwar period as a whole, food expenditures accounted for nearly one-quarter of the total increase in personal expenditure on consumer goods and services, in current value terms.

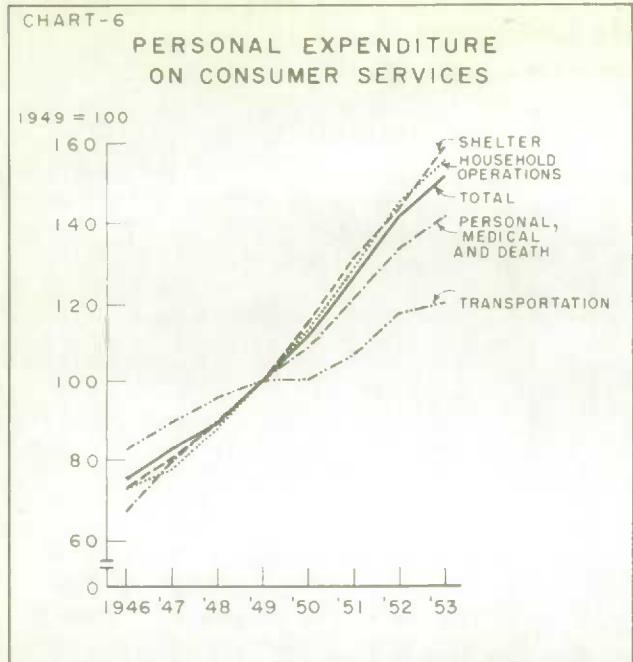

Clothing, which constitutes the second largest group of non-durable goods sales, experienced more moderate changes from 1946 to 1953. The increase in clothing sales amounted to approximately 55 per cent from 1946 to 1953, but, with price changes almost equal to those for food, there was little or no change in the volume of clothing purchases throughout these years, and its share of expenditures on non-durable goods, consequently declined. Thus, with a population growth of 20 per cent there has been a substantial decline in the per capita volume of clothing consumption since 1946. This development has continued in the first half of the current year, when the volume of clothing purchases was lower by about 3 per cent than in the same part of 1953.

In the tobacco and alcoholic beverages group a value gain of about 58 per cent occurred between 1946 and 1953. When allowance is made for the smaller price advances in this group, a significant volume increase is evident, substantially greater than that which occurred in either the food or clothing groups.

Services

The service component consists principally of shelter (including an imputed rent estimate for owner-occupied houses), household operations, transportation, personal and medical care. Personal expenditures on education, recreation and other service items also are included.

The sharp increase in expenditure on services between 1946 and 1953 followed upon the moderate advance in this component during the war. It will be noted in Chart 3, for example, that the

service group represented a much smaller share of total consumer expenditure in 1946 than in the pre-war years of 1929 and 1939. Although a shift toward the pre-war position has been in progress since 1948, the share of consumer outlay going to the service group in 1953 was well below the pre-war level. Higher personal incomes have been an important factor contributing to rising service expenditures, and the increase in population and housing has brought with it a greater aggregate demand for all other principal services. In addition, price increases between 1949 and 1953, were greater in this group than for the commodity components. In this connection the shelter component of the consumer price index in 1953 was more than 23 per cent higher than in 1949, compared with an increase of 15 per cent for all goods and services represented in the consumer price index.

After allowance for the rise in prices, expenditure on the service group was nearly 30 per cent higher in 1953 than in 1946, and thus showed a more significant increase than the total of the non-durable goods component. Even after this pronounced advance, however, services absorbed a smaller share of total expenditure in 1953 than in 1939. Significant volume gains in services came in 1952 and 1953, years of substantial house-building, expansion of utilities and telephone service and of air travel.

The growth in this last item, for example, is indicated by the number of revenue passenger miles flown in civil aviation, which (omitting overseas services) amounted to 940 million in 1953 compared with 206 million in 1946 and only 22 million in 1939.

Recent Developments

Personal expenditure on consumer goods and services was estimated to be approximately \$15.5 billion (seasonally adjusted at annual rates) in the first half of 1954, compared with less than \$15.2 billion on average for the year 1953. With most of the other final demand categories undergoing declines, personal expenditure on consumer goods and services was thus the major expansive element in the economy in this recent period. The continued expansion of the service component was the major factor in this increase in current value terms; personal expenditure on services (seasonally adjusted at annual rates) was higher by \$228 million (or by nearly 5 per cent) than in the year 1953; expenditure on non-durable goods advanced by \$215 million (or by about 3 per cent) in the same comparison; expenditure on consumer durable items was lower by nearly \$100 million (or by more than 5 per cent), mainly reflecting reduced sales of new passenger cars in the first half of the current year.

After allowance for price changes, the advance of the service component in the first half of 1954 was less pronounced than the above comparison indicates; the gain in consumption of non-durable goods was relatively more important, reflecting particularly further increases in food consumption. In volume terms, purchases of durable goods continued to show notable reductions. By either standard of comparison, however — in volume or value terms — total personal expenditure on consumer goods and services at mid-1954 was at a high level, being maintained by a flow of personal disposable income higher than in any preceding year. On a per capita basis, personal expenditure on consumer goods and services by the middle of 1954 was well above the early postwar peak, and about 6 per cent higher than in 1951, following the marked increases in per capita consumption in 1952 and 1953.

(1) For newsprint, gold and power, Newfoundland data are included as of April, 1949, May, 1949 and January, 1950 respectively. (2) Monthly data are producers' shipments. (3) Data exclude persons in certain remote parts of several provinces and Indians on reservations. Newfoundland included as of March, 1950. (4) For this purpose, paid workers are taken to include all those in the civilian labour force who are without jobs and seeking work. (5) Includes only those not at work and seeking work. (6) Regular benefit. Newfoundland included as of April, 1949. (7) Conversions are included with annual data only. (8) Prior to 1946 annual data as of June 1. From 1946 annual figures are survey averages. (9) Relates to hourly earnings in one week in the month of highest employment (overtime included).

Note.—Until the end of 1952, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Data for 1952 have been revised accordingly. Monthly figures for 1953 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

⁽¹⁾Estimates are given by years as of June 1 and by quarters for Canada as of June 1, 1952. ⁽²⁾Exclusive of stillbirths. ⁽³⁾Not applicable to figures on population. ⁽⁴⁾Yukon and North-West Territories not included in figures for births, marriages and deaths. Newfoundland is included as of January, 1951.

Population, ⁽¹⁾ Births, ⁽²⁾ Marriages and Deaths ⁽²⁾

2nd	3,322	653	222	297	433	- 138	1,157	- 1,288	+ 57	4,715	

(1) Accrued net income of farm operators from farm production. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for live-stock items and no seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given to the seasonally adjusted figures for this item.

(2) This item differs from column 4, top of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

Note.—These estimates are derived from a sample survey and are subject to sampling error. In general the smaller the estimate the larger is the relative sampling error. Newfoundland included in estimates from October, 1949.

Annual data for 1939 are as of June 1.

Note: Newfoundland is represented as of 1949.

13

Reported by firms customarily employing 15 persons or more. Statistics throughout Tables 9 to 11 are compiled from data which relate to the last pay period of the preceding month.

*Average weekly wages and salaries.

⁽¹⁾Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products. ⁽²⁾Includes foods and beverages, tobacco and tobacco products, rubber products, leather products, textile products except clothing, clothing, paper products, printing, publishing and allied industries, products of petroleum and coal, chemical products, and miscellaneous manufacturing industries.

(1) Excluding Newfoundland. The prices of western wheat and coarse grains prior to August, 1953 are final prices, whereas those used since are initial prices only. (2) Arithmetically converted from 1935-39 = 100. (3) Excludes gold.

(1) As at end of period. (2) Total inventories held including manufacturers' own inventories and that portion not owned by reporting firms but financed by progress payments. (3) Inventories include manufacturers' own investment only. (4) Includes primary iron and steel, iron castings, sheet metal products and wire and wire products. (5) Includes heavy electrical machinery, office, household and store machinery and industrial machinery. (6) Excludes heavy electrical machinery.

34 Note.—The indexes are based on December 1952 = 100. For further details and complete 1952 data, see the August 1952 report.

⁽¹⁾Total backlog of orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. The data are reported by 950 manufacturing plants which account for approximately 30% of total value of production in 1950. ⁽²⁾Orders represent a two-month sales forecast, not total outstanding orders. ⁽³⁾Excluding motor vehicles. *Not applicable to "Ratio" columns. **Ratio of current month's orders to current month's shipments.

Note: Newfoundland is included as of April, 1949, in data for wood pulp and newsprint.

39

(1) Monthly totals are not equivalent to annual data which include Newfoundland (since 1949) and Yukon and North West Territories for which only annual statistics are collected.

(2) Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

⁽¹⁾As of January, 1950 includes some silvery pig iron formerly included with ferro-alloys.⁽²⁾Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.⁽³⁾Prior to 1946, imports include castings and forgings and rolling mill products.

Since 1946, they include, in addition to all other shapes, wire and wire rope.

Beginning January 1954, imports exclude castings, forgings, fittings and couplings.

⁽⁴⁾Excluding producers' interchange.⁽⁵⁾Monthly average.

Generally, the twenty-four municipalities for which data are shown were selected as being leaders in the amount of permits issued during the period 1926-1946. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December, 1946.

44 ⁽¹⁾The coverage was extended to 507 municipalities in 1948, and as of 1954, stands at 819, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

⁽²⁾As of January, 1950, Newfoundland is included.

⁽¹⁾Planks and boards, flooring and square timber. ⁽²⁾Includes Newfoundland as of May, 1949. ⁽³⁾Hollow blocks including fire-proofing and load-bearing tile. ⁽⁴⁾For building insulation only. ⁽⁵⁾Figures cover the production of firms which normally account for 85 per cent of the total for Canada. ⁽⁶⁾Since January, 1949, includes concrete chimney blocks. ⁽⁷⁾Prior to 1946 figures represent gross value of production. Figures from 1946 to the present are factory sales of firms which normally account for 96% of total Canadian production.

(1) Includes advance equalization payment on barley until March, 1947, and subsidy on hogs from 1944 to date.

(2) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (3) Prior to 1941, prices were quoted on a live weight basis. (4) Prior to August, 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

(1) Monthly totals of 1953 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months. (2) Does not include bait, offal, meal, livers, tongues or roe. (3) As of April, 1949, Newfoundland is included. (4) Data for Newfoundland are included as of January, 1954. Corresponding months of 1953 are revised to include Newfoundland as data for the current period becomes available.

⁽¹⁾ Estimates of charge accounts and instalment receivables outstanding on the books of retail dealers do not include Newfoundland. In the case of other items, Newfoundland estimates have been included, as available, commencing June 30, 1949.

⁽²⁾ Charge accounts receivable outstanding on the books of retail dealers. Excludes Newfoundland.

⁽³⁾ Instalment receivables outstanding on the books of retail dealers. Excludes Newfoundland.

⁽⁴⁾ Instalment paper held by sales finance and acceptance companies in connection with the financing of retail purchases of consumer goods, largely new and used automobiles.

⁽⁵⁾ Includes estimated personal loans by chartered banks, small loan companies, licensed money lenders and credit unions.

⁶² Beginning with April, 1950, Newfoundland is included.

(1) In the upper section of this table, the annual statistics prior to 1953 embrace all steam railways, while monthly averages for 1953 and monthly data refer to railways with annual operating revenues of \$500,000 or over. (2) Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities.

⁽¹⁾ Assignments made under the Bankruptcy and Winding Up Acts.⁽²⁾ Quarterly data for the last five columns are monthly averages.⁽³⁾ In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Since July, 1950, agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available.
