# Current Economic Conditions

## Trends in Economic Activity— Canada and the United States

The purpose of the present article and the accompanying charts is to compare Canadian and United States developments in the perspective of the postwar period as a whole, and to comment briefly on the most recent trends as they have emerged in both Canada and the United States.<sup>1</sup>

It is interesting to observe from the review that follows that the pattern of developments in each of the two countries has been generally similar when examined in the broad perspective of total output, income and expenditure. The reasons for this are not difficult to find. First,

the Canadian and United States economies are closely linked in many ways, though perhaps our export and import trade with the United States is of first importance in this respect. Second, the two economies also possess many similar structural characteristics, common to all well-advanced industrial countries, although marked dissimilarities in structure do exist. Third, in the postwar period, international events have brought similar pressures to bear on the two countries -- for example, the need for enlarged defence establishments, the post-Korean worldrise in prices of basic international commodities, and subsequent developments. Finally, both Canada and the United States entered the postwar period under the influence of two similar and very powerful sets of internal stimuli which largely conditioned developments in the immediate transition period. Each country was faced with an enormous backlog of demand for many types of consumer and investment goods, generated by war-time shortages and restrictions. At the same time, each country possessed a large volume of war induced private saving accumulated by consumers and businesses, which was available to make these demands effective.

1. In making comparisons between the two countries a number of technical difficulties arise which make such comparisons only approximate at best. Series regarded for these purposes as the same, can display differences because of the coverage, weighting or base periods used. Also, for purposes of comparison, many of the series have been converted mechanically to a common base period, a procedure which can cause distortion. As a result it should be borne in mind that the comparisons are somewhat imprecise. In order to permit the data of two countries of disparate size to be plotted on the same chart, United States dollar values have been plotted with a 15:1 ratio to Canadian. The charts are not intended to compare levels in the two countries, merely changes that have taken place during the time periods shown.

All of these factors taken together have brought about a great degree of correspondence in the movements of the major Canadian and United States economic indicators in the postwar years. Differences in movement, as the charts indicate, have been mainly with respect to timing or magnitude rather than direction. This situation is also true of the recent down-turn in economic activity in the two countries. In the recent period, the relative magnitude of the decline in aggregate output in the United States appears to have been larger than that in Canada, and to have begun slightly earlier in 1953. In the United States, the drop in total output first occurred between the second and third quarters of 1953, while in Canada the first decline occurred between the third and the fourth quarters, as shown by seasonally adjusted gross national product. Again, as regards magnitude, in the United States the decline from the peak second quarter of 1953 to the first quarter of this year has amounted to 4 per cent (seasonally adjusted); in Canada the decline from the peak third quarter of 1953 to the first quarter of this year amounted to 2 per cent. Compared with a year earlier, the index of industrial production in the first quarter of 1954 showed a drop in the United States of more than 7 per cent, while in Canada the decline amounted to 2 per cent.

The following pages examine some of the developments in the Canadian and United States

economies in terms of the major economic indicators. Among the points which emerge from this analysis, the following are perhaps worthy of special emphasis:

- The general similarity in the postwar increases in the volume of output, and the somewhat greater decline in the level of activity in the United States in recent months.
- The marked postwar increase in employment, real earnings and personal expenditures, and the greater strength of real earnings and consumer expenditure in Canada since 1951.
- The very considerable growth in investment in durable assets in both Canada and the United States and the greater growth in Canada than in the United States.
- The large inventory liquidations in the United States which contributed to the declines in output in that country in 1949 and the recent period, and which were less apparent in Canada.
- The very rapid rise in government expenditure on goods and services from 1949 to 1953, associated with heavy defence expenditures in both countries.
- The large postwar expansion in the volume of trade between the two countries.

Comparisons of some of the overall measures of postwar expansion and the recent change are given in the following table:

### Canada-United States Postwar Growth

		1946	1947	1948	1949*	1950	1951	1952	1953	% Change 1953 1946

### The Postwar Growth in Gross National Product

It may be noted in the above table and accompanying charts that the total volume of production increased by about one third in Canada and by approximately 29 per cent in the United States between 1946-1953. However, during this period the rise in prices in Canada was greater than in the United States reflecting the fact that Canadian prices had not risen as rapidly during the war; in 1946, with price controls still having a restraining effect, the indexes of Canadian prices were below those of the United States. From 1946 to 1953 Cana-

dian prices advanced more rapidly and as a consequence the gain in Canada's gross national product in terms of current dollars was considerably greater than that of the United States. Although it is not apparent from the charts, the differences in the timing of price changes resulted in approximately the same percentage rise from 1939 to date in the two countries.

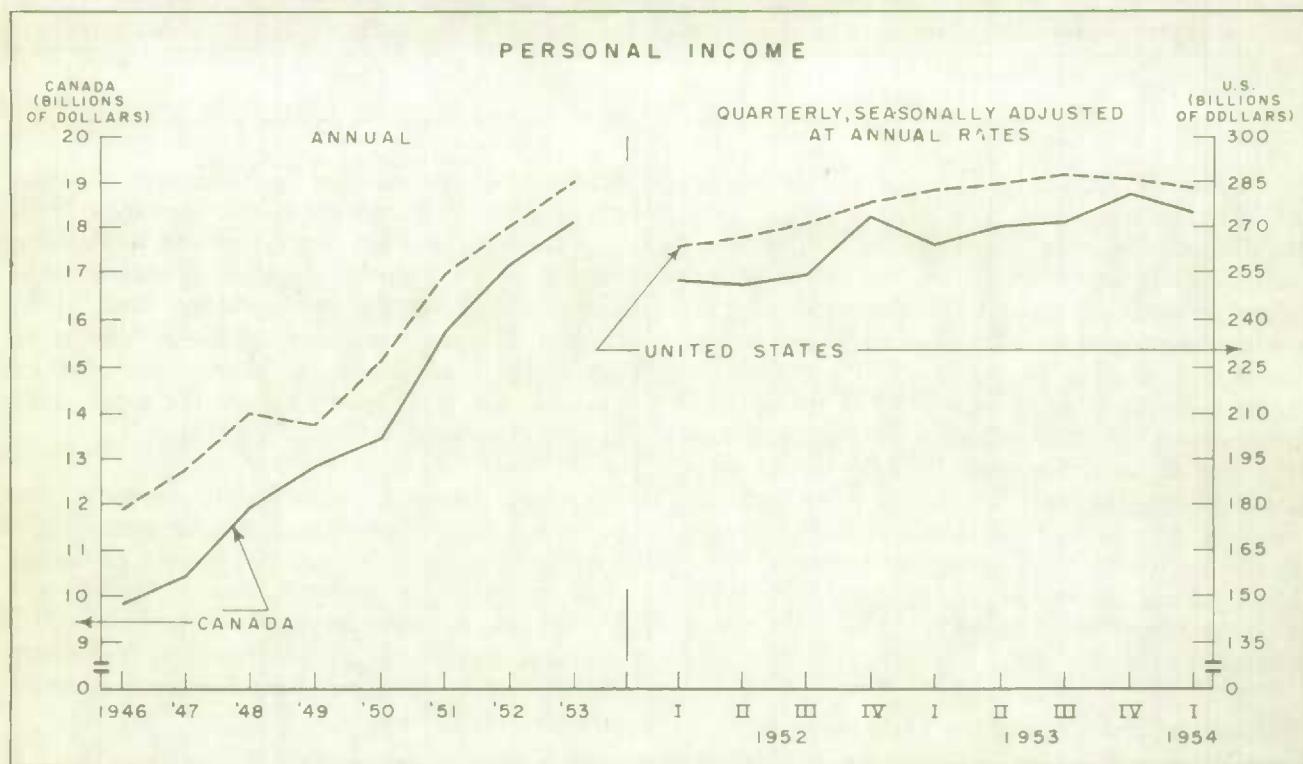

The index of industrial production also indicated similar rates of increase in this sector of activity in both countries, although in this case the advance in the United States was slightly greater than in Canada from 1946 to 1953. Employment in the postwar years also

showed a substantial increase of very nearly the same relative amount in both countries. The smaller rate of advance in the employed civilian labour force than in physical output suggests a growing rate of output per employed person.

Total output in the two countries reached a peak in mid-1953; as noted above, gross national product (seasonally adjusted) in Canada was highest in the third quarter of that year, while in the United States it reached a peak in the second quarter (seasonally adjusted at annual rates). From these peak levels, output declined in subsequent quarters to a level, in the first quarter of this year, 2 per cent lower in Canada

and 4 per cent lower in the United States than in their respective highest quarters. This reduction left the gross national product in Canada at about the level of the first quarter of last year, and that of the United States at about the level of the fourth quarter of 1952.

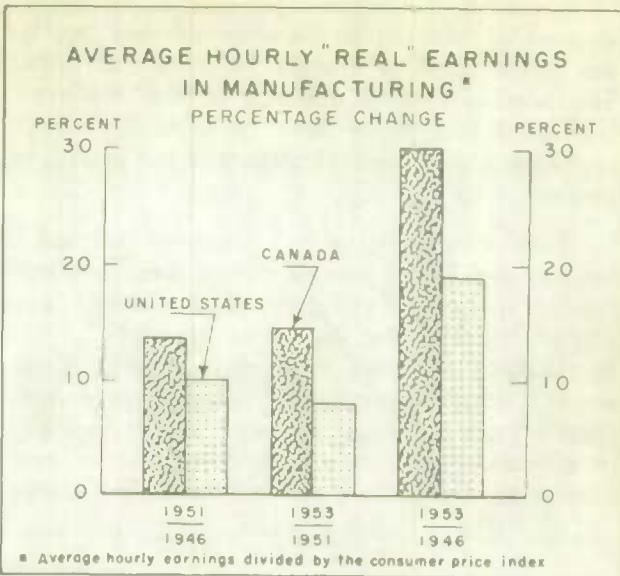

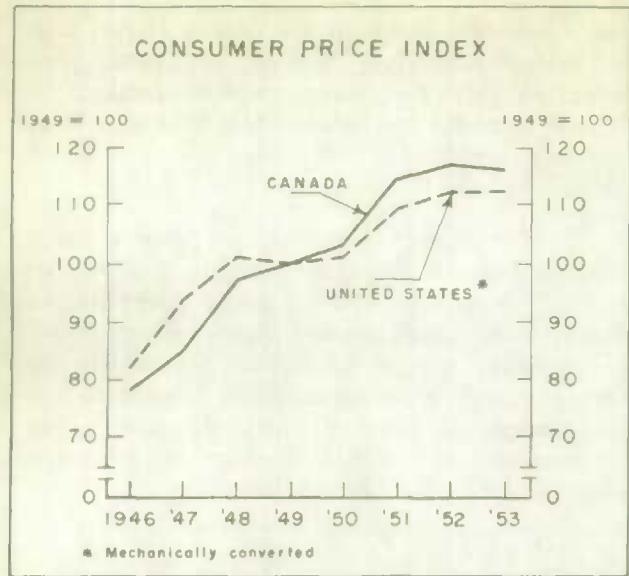

On the expenditure side, the recent downturn has been marked principally by a cessation in the rate of business inventory accumulation and by slight declines in all other major sectors of demand except consumer expenditure in Canada; and by a substantial liquidation of inventories, a drop in national security expenditures, and a slight drop in consumer expenditure in the United States.

### Income, Prices and Real Earnings

In order to appraise real income gains, the substantial increases which took place in personal income in the postwar years are examined here against a background of price changes. Between 1946 and 1953, while personal income rose by 85 per cent in Canada, and average hourly earnings in manufacturing advanced 94 per cent, the consumer price index rose by only 49 per cent. In the United States, in the same period, both the price and income changes were

relatively smaller; personal income rose by 60 per cent, average hourly earnings in manufacturing by 63 per cent and the consumer price index by 37 per cent. The conclusion which is indicated from the above statistics is that real income gains in both countries in the postwar period have been substantial and that the increases in average real hourly earnings in Canada have been considerably larger than in the United States.

In the last half of 1953 and the first quarter of 1954 the maintenance of high levels of personal incomes was a steady influence in both Canada and the United States at a time when weaknesses were beginning to appear in certain sectors of the economy. While in Canada there was no drop in the level of personal income from the third quarter of 1953 to the first quarter of 1954, in the United States the moderate decline from the peak 1953 level was considerably smaller than the drop in gross national product, amounting to less than 2%. With lower employment in both countries much of this stability of incomes is attributable to the maintenance of rates of earnings slightly above the rates of a year ago.

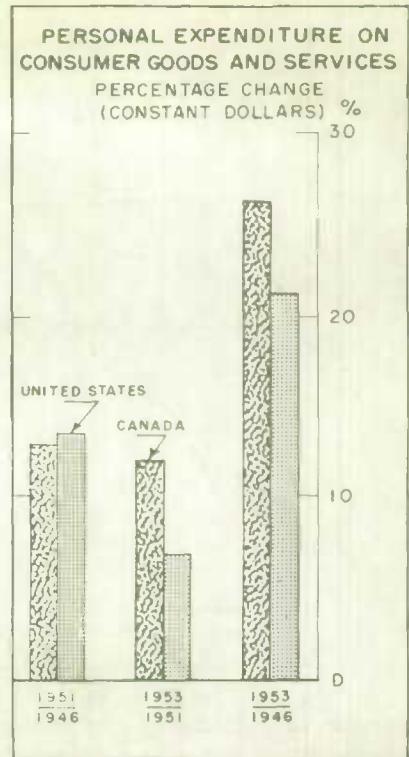

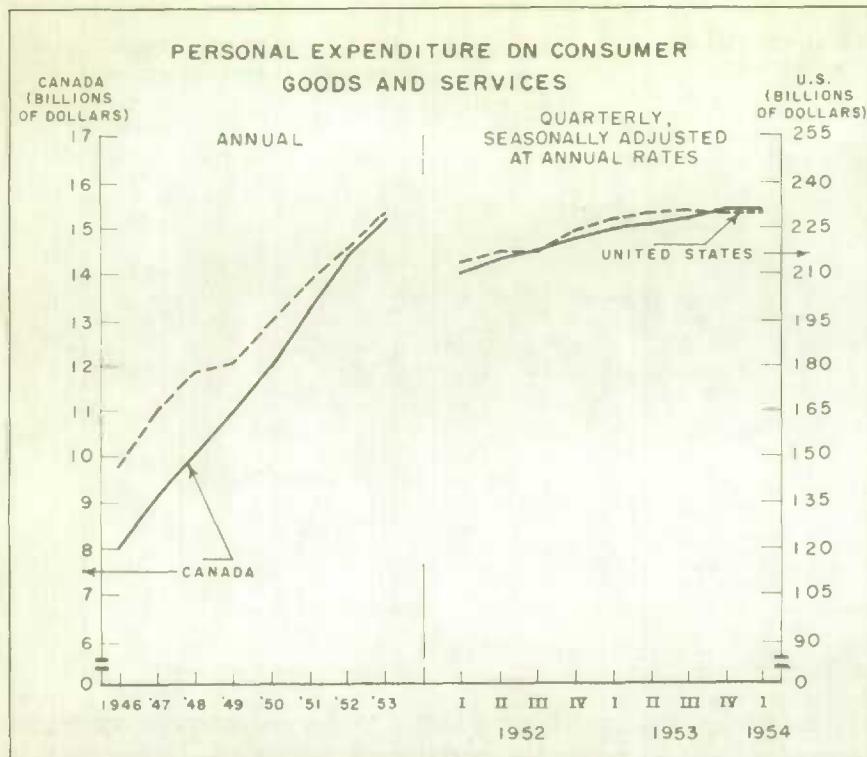

### Personal Expenditure on Consumer Goods and Services

Over the entire period, 1946-1953, the volume of goods and services absorbed by consumers in the United States and Canada rose substantially. When allowance is also made for the growth in population, the volume of consumer goods and services absorbed by Canadians on a per capita basis was 5 per cent higher in 1953 than in 1946 and 56 per cent higher than in 1939. In the United States, a similar per capita comparison shows gains of 7 per cent and 41 per cent from 1946 and 1939 respectively. Thus, per capita gains in Canada were greater than in the United

States when comparison is made with the last pre-war year, but somewhat smaller since 1946. In Canada, the most rapid postwar rate of increase in the volume of personal expenditures on consumer goods and services took place after 1951; some measure of the difference is given in the accompanying chart. This advance occurred at the same time as the most rapid postwar increase in "real" earnings.

After seasonal adjustment, personal expenditure on consumer goods and services in the first quarter of 1954 was maintained at levels very near the peak expenditures of 1953. In the United States there was a decline of about 0.5 per cent from the high third quarter; in Canada there was no decline from the peak (fourth) quarter of last year.

Despite this stability in the total of personal expenditure on consumer goods and services, shifts have occurred in the three main categories in the recent period. Personal expenditure on durable goods, which had made the most rapid advance through the postwar years, experienced the largest reductions, with a larger relative decline in the United States than in Canada. Service expenditures continued upward in both countries, while expenditure on non-durable goods fell off slightly in the United States and showed a small advance in Canada in the first quarter of this year.

### The Rapid Expansion of Investment in Durable Assets

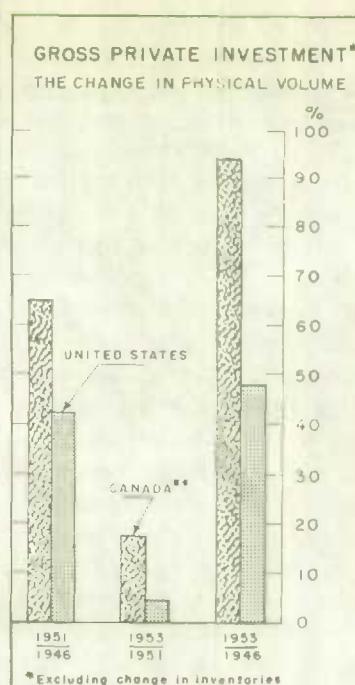

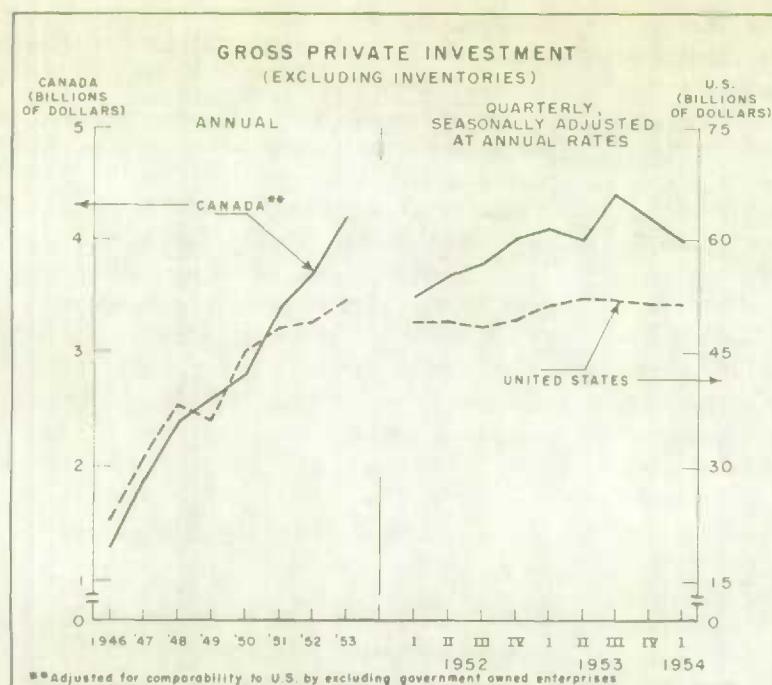

The postwar growth of investment in capital facilities has been one of the most significant factors in Canadian economic development, and is one of the areas in which a marked difference in the rate of development has occurred between Canada and the United States.

During the second World War there was a considerable expansion in the industrialization of the Canadian economy, but many capital projects of a less pressing nature were held back until emergency requirements were met. It was possible, too, for individuals and private business in general to enter the postwar period with substantial liquid reserves and a fairly low debt structure. The deferred investment requirements, together with the rapid postwar increase of population and family formation, at a time when personal and business incomes also were buoyant, provided a highly favourable economic setting for the large postwar expansion in capital investment.

In addition, growing requirements for basic resources both in Canada and abroad, particularly in the United States, gave considerable strength to the development of basic natural resources. This development was given further

impetus by technical improvements in locating and exploiting resources in outlying areas. All of these developments taken together have favoured a relatively heavier postwar investment programme in Canada than in the United States. The Canadian private investment programme, after allowance for price changes, was 94 per cent higher in 1953 than in 1946; that of the United States was 48 per cent higher. As a proportion of gross national product in real terms, Canada's private investment programme rose from 11 per cent in 1946 to 15 per cent in 1953; while that of the United States rose only from 12 per cent to 13 per cent. If government investment is added in Canada, as in the National Accounts, the increase in the volume share of gross domestic investment (excluding the change in inventories) was from 13 per cent in 1946 to more than 17 per cent in 1953.

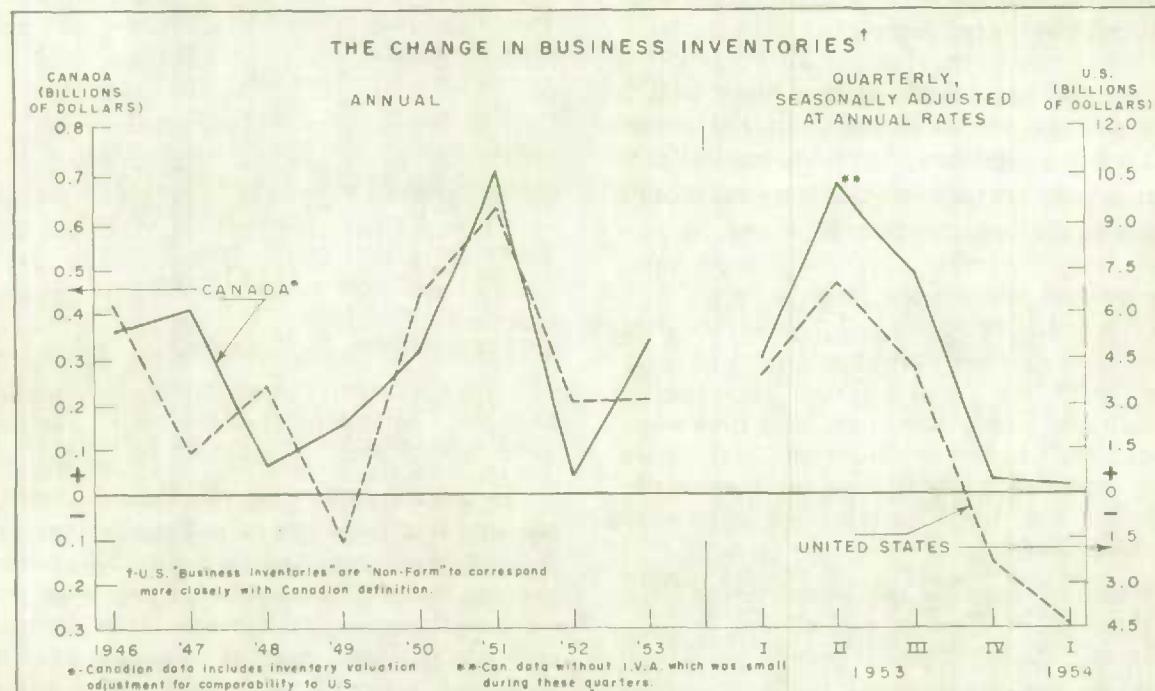

In both Canada and the United States, the greatest relative advance in the physical volume of investment occurred prior to 1951, when the average annual increments were greater than in the years since 1951. In the latter period, the somewhat lower rate of advance in Canada compared with the preceding period, reflected mainly a slowing down in the growth of the

volume of machinery and equipment purchases; construction activity continued to expand rapidly until the first quarter of 1954. In the United States, both construction activity and investment in machinery and equipment have shown reductions in rate of growth after 1951.

The decline in expenditure in construction in Canada in the first quarter of 1954 was a

contributing factor to the reduction in aggregate economic activity at that time. However, this development appears to be associated with the rather special weather conditions which prevailed in 1953-54, namely the open fall which permitted a high fourth quarter rate of building and a severe winter which adversely affected activity in the first quarter.

## **The Change in Non-Farm Inventories**

The large expansion in expenditures for goods and services in the postwar period was accompanied by a heavy build-up of business inventory stocks to meet the increased demands. In the periods when this additional build-up was taking place a further stimulus was given to production. The immediate transition period after the war was largely given over to filling up the inventory pipe lines which were thoroughly depleted during the war. By 1949, however, this process had been largely completed, at least in the United States, where inventory stocks appeared to be generally adequate and, in certain lines, were becoming excessive. As a consequence, a substantial liquidation of business inventories occurred in the United States in 1949, and constituted an important factor in the moderate recession which developed in that country at that time. In Canada, in 1949, the rate of business inventory accumulation fell off sharply although there was no net liquidation as in the United States. In the immediate post Korean period an exceptionally heavy build-up of business inventories occurred in both countries, associated in part with fears of shortages and expectations of higher prices. In 1952 and 1953, the rate of accumulation slackened considerably, and by late 1953, in the United States, a substantial liquidation of business inventories was again in progress. This development continued into the first quarter of 1954 and has been of major significance in the recent declines in production. The magnitude of the change of inventories, in the recent period, from a position of net accumulation to one of net liquidation has been approximately the same as that which occurred in 1949.

By contrast, in Canada, while the rate of business inventory accumulation fell quite sharply from the third quarter of 1953 to the first quarter of 1954 (seasonally adjusted), there was no net liquidation as in the United States.

## **Government Expenditure on Goods and Services**

The most pronounced expansion of government expenditure on goods and services in the postwar period occurred after the outbreak of hostilities in Korea and was directly associated with general security requirements. Between 1947 and 1950, government expenditure in

Canada, after adjustment for price changes, rose by 20 per cent; in the United States a larger increase took place (about 29 per cent). However, following the outbreak of the Korean war, government expenditure in both countries rose rapidly. Between 1950 and 1953 the increase in Canada, in physical terms was 57 per cent, and in the United States, 81 per cent. This substantial rate of increase has come to an end in the recent period; defence outlays in both Canada and the United States are no longer providing the same expansionary force in the two countries as they did in the immediately preceding years.

## **The Growth in Canada-United States Trade**

Between 1946 and 1953, Canada's domestic exports increased in value by nearly 80 per cent; those of the United States by 65 per cent. The value of Canada's commodity imports increased by 135 per cent over this period and that of the United States by about 125 per cent. Trade between the two countries likewise grew. Between 1946 and 1953 commodity imports to Canada from the United States increased by approximately the same relative amount as imports from all countries, with the result that the share of Canada's import trade originating in the United States was maintained at over 70 per cent. The percentage rise in exports to the United States over this period, however, was considerably greater than that to other countries combined and the proportion of our total export trade going into the United States increased from 38 per cent in 1946 to 59 per cent in 1953. Even after this more marked increase in the share of export trade than in import trade between 1946 and 1953, however, a substantial import balance remained outstanding in Canada's commodity trade with the United States in 1953.

At the end of the first quarter of 1954 declines had occurred in our exports to the United States. At the same time, most of the decline in the value of Canada's imports in recent months has occurred in the purchases from the United States; the declines in imports from that country have been relatively larger than the drop in exports to the United States. These declines in exports and imports, however, left trade between the two countries at a high level compared with the years prior to 1953.

(1) For newsprint, gold and power, Newfoundland data are included as of April, 1949, May, 1949 and January, 1950 respectively. (2) Monthly data are producers' shipments. (3) Data exclude persons in certain remote parts of several provinces and Indians on reservations. Newfoundland included as of March, 1950. (4) For this purpose, paid workers are taken to include all those in the civilian labour force who are without jobs and seeking work. (5) Includes only those not at work and seeking work. (6) Newfoundland included as of April, 1949. (7) Conversions are included with annual data only. (8) Prior to 1946 annual data as of June 1. From 1946 annual figures are survey averages. (9) Relates to hourly earnings in one week in the month of highest employment (overtime included).

4 Note.—Until the end of 1952, annual data for births, deaths and marriages are based on tabulated figures by month of occurrence on the basis of residence. Data for 1952 have been revised accordingly. Monthly figures for 1953 are provisional and represent registrations filed in Provincial Vital Statistics offices during the month under review, regardless of the month of occurrence.

<sup>(1)</sup>Estimates are given by years as of June 1 and by quarters for Canada as of June 1, 1952. <sup>(2)</sup>Exclusive of stillbirths. <sup>(3)</sup>Not applicable to figures on population. <sup>(4)</sup>Yukon and North-West Territories not included in figures for births, marriages and deaths. Newfoundland is included as of January, 1951.

Note: Newfoundland is included as of 1949.

(1) Accrued net income of farm operators from farm production. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for live-stock items and no seasonal adjustment for earnings of the Canadian Wheat Board. Because of the arbitrary elements too precise an interpretation should not be given to the seasonally adjusted figures for this item.

(2) This item differs from column 4, top of page 6, in that it excludes undistributed earnings (and the inventory valuation adjustment) of the Canadian Wheat Board.

Note.—These estimates are derived from a sample survey and are subject to sampling error. In general the smaller the estimate the larger is the relative sampling error. Newfoundland included in estimates from October, 1949.

Annual data for 1939 are as of June 1.

Note: Newfoundland is represented as of 1949.

13

Reported by firms customarily employing 15 persons or more. Statistics throughout Tables 9 to 11 are compiled from data which relate to the last pay period of the preceding month.

\*Average weekly wages and salaries.

(1)Includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products. (2)Includes foods and beverages, tobacco and tobacco products, rubber products, leather products, textile products except clothing, clothing, paper products, printing, publishing and allied industries, products of petroleum and coal, chemical products, and miscellaneous manufacturing industries.

22 Note: Newfoundland data are included as of April, 1949. In the first five columns "unemployment assistance" for that province is disregarded.

(1) Monthly data as of end of month while annual section is based on averages of month-end statistics. (2) Estimates based upon the number of payments in the week containing the last day of the month.

(3) Supplementary benefit payments are excluded.

34 Note.—The indexes are based on December 1952 = 100. For further details and complete 1952 data, see the August 1952 report.

<sup>(1)</sup>Total backlog of orders on books at end of month, irrespective of work done on them or of stocks from which they can be filled, but less progress receipts in industries working on long term contracts. Sales in these industries include progress receipts. The data are reported by 950 manufacturing plants which account for approximately 30% of total value of production in 1950. <sup>(2)</sup>Orders represent a two-month sales forecast, not total outstanding orders. <sup>(3)</sup>Excluding motor vehicles. \*Not applicable to "Ratio" columns. \*\*Ratio of current month's orders to current month's shipments.

Note: Newfoundland is included as of April, 1949, in data for wood pulp and newsprint.

39

\* Monthly and annual data revised according to more recent bench-marks.

(1) Monthly totals are not equivalent to annual data which include Newfoundland (since 1949) and Yukon and North West Territories for which only annual statistics are collected.

(2) Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

<sup>(1)</sup>As of January, 1950 includes some silvery pig iron formerly included with ferro-alloys.<sup>(2)</sup>Excluding producers' interchange.<sup>(3)</sup>Prior to 1946, exports include pigs, ingots, blooms, billets and rolling mill products.<sup>(4)</sup>Prior to 1946, imports include castings and forgings and rolling mill products. Since 1946, they include, in addition to all other shapes, wire and wire rope.

Beginning January 1954, imports exclude castings, forgings, fittings and couplings.

Generally, the twenty-four municipalities for which data are shown were selected as being leaders in the amount of permits issued during the period 1926-1946. Annual statistics for 58 municipalities are available historically in the Canada Year Book. Monthly reports on the subject were discontinued in December, 1946.

(1) The coverage was extended to 507 municipalities in 1948, and as of 1954, stands at 819, minor revision still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation.

(2) As of January, 1950, Newfoundland is included.

<sup>(1)</sup>Planks and boards, flooring and square timber. <sup>(2)</sup>Includes Newfoundland as of May, 1949. <sup>(3)</sup>Hollow blocks including fire-proofing and load-bearing tile. <sup>(4)</sup>For building insulation only. <sup>(5)</sup>Figures cover the production of firms which normally account for 85 per cent of the total for Canada. <sup>(6)</sup>Since January, 1949, includes concrete chimney blocks. <sup>(7)</sup>Prior to 1946 figures represent gross value of production. Figures from 1946 to the present are factory sales of firms which normally account for 96% of total Canadian production.

(1) Includes advance equalization payment on barley until March, 1947, and subsidy on hogs from 1944 to date.

(2) Based on price for hogs including Dominion premium. A rise in ratio favours production of beef. (3) Prior to 1941, prices were quoted on a live weight basis. (4) Prior to August, 1939, Barley No. 1 feed was designated as Barley No. 3 C.W.

<sup>(1)</sup>Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. <sup>(2)</sup>Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted. <sup>(3)</sup>Annual data are monthly averages of crop year.

(1) Monthly totals of 1953 are not equivalent to annual data due to receipt of additional statistics which cannot be allocated by months. (2) Does not include bait, offal, meal, livers, tongues or roe. (3) As of April, 1949, Newfoundland is included. (4) Data for Newfoundland are included as of January, 1954. Corresponding months of 1953 are revised to include Newfoundland as data for the current period becomes available.

(1) Estimates of charge accounts and instalment receivables outstanding on the books of retail dealers do not include Newfoundland. In the case of other items, Newfoundland estimates have been included, as available, commencing June 30, 1949.

(2) Charge accounts receivable outstanding on the books of retail dealers. Excludes Newfoundland.

(3) Instalment receivables outstanding on the books of retail dealers. Excludes Newfoundland.

(4) Instalment paper held by sales finance and acceptance companies in connection with the financing of retail purchases of consumer goods, largely new and used automobiles.

(5) Includes estimated personal loans by chartered banks, small loan companies, licensed money lenders and credit unions.

<sup>62</sup> Beginning with April, 1950, Newfoundland is included.

(1) In the upper section of this table, the annual statistics prior to 1953 embrace all steam railways, while monthly averages for 1953 and monthly data refer to railways with annual operating revenues of \$500,000 or over. (2) Operating income equals operating revenues less operating expenses adjusted for tax accruals and rent of equipment and joint facilities.
